CIRCULATION WORLD-WIDE.

THE AMERICAN FANCIER

A WEEKLY JOURNAL DEVOTED TO

Poultry, Pigeons and Pet Stock.

VOL. XVI. NO. 400. JOHNSTOWN, N. Y., SATURDAY, MAY 4, 1901. PRICE FIVE CENTS

ADVERTISEMENTS CLOSE TUESDAY NOON.

THOSE LITTLE CHICKS

YOU LOST THROUGH BOWEL TROUBLE MIGHT ALL HAVE BEEN SAVED,

had you had our No. 2 STAR SPECIFIC to use, and the same is true of the old fowls had you used the No. 1. We guarantee these remedies to cure every case of bowel trouble if the bird has strength to swallow.

..IF YOU WANT EGGS, USE STAR SPECIFIC NUMBER THREE..

Our No. 4 will knock out a cold in short order, No. 5 is for inactive males, No 6, Indigestion. To successfully raise those little chicks you expect to hatch, then you must have STAR SPECIFIC No. 7, a perfectly balanced food for little chicks. No. 8, a disinfectant insect powder.

You cannot afford to be without these Specifics. A small Investment may save you $$$ worth of Birds. Don't wait until you need them before you order, but have them on hand... See This:☞

Circular and Price List for the asking, of any of the parties below:

W. W. Rawson & Co., 13 Faneuil Hall Sq., Boston, Mass.
Harvey Seed Co., Buffalo, N. Y.

M. B. Dewey & Co., 131 E. Pearl St.. Jackson, Mich.
Or any real live poultry supply dealer. DON'T ACCEPT ANY SUBSTITUTE. INSIST ON HAVING STAR SPECIFIC.

WHAT SAVED JUDGE CLARK'S CHICKENS.

Scotch Plains, N. J., Sept. 13, 1900—Judge Clark, when not dispensing law and dealing out justice, devotes a great deal of his time to raising chickens and ducks. About two weeks ago his fowls were attacked with a disease which began carrying them off at an alarming rate, notwithstanding all his efforts to check the epidemic. Several authorities on chickens were consulted and it was agreed that the fowls were suffering from some form of cholera. A remedy was at last found to check the disease. This was procured from the Star Incubator Co., of Bound Brook, and it proved to be just the thing, and the Judge is once more happy and will begin at once to replenish his stock.

From Plainfield (N. J.,) Daily Press. September 13th, 1900.

Manufactured only by STAR INCUBATOR COMPANY, BOUND BROOK, N. J., AND 38 VESEY ST., N. Y. CITY.

IT IS A FACT

That our Breeding Pens of Black Minorcas contained more noted prize-winning birds than any two yards combined. We have raised from them the **LARGEST** and **BEST** flock of chicks we have ever owned.

Prospective buyers will do well to consider **THESE FACTS** before buying and send stamp for our new Catalogue.

SANTEE & ANDRUSS, Canandaigua, N. Y. 84-95

The Belgian Hare Guide

This book is acknowledged to be the finest and most reliable book out on the Belgian hare industry. It contains complete and practical information on the following and many other subjects pertaining to the industry: History and Origin, The Belgian for Utility, The Belgian for Fancy, The Business and its Outlook, How to Begin, Houses and Hutches, Foods and Feeding, Feeding Green Stuff, Mating and Breeding, Care of the Young Pedigrees, Score Cards and Judging, Belgian Hare Color, Dressing and Cooking, Diseases and Remedies, Preparing for Exhibition, Crating and Shipping, Caponizing, Queries and Answers Miscellany, Belgian Hares vs. Poultry, The Belgian in England, The Belgian in California, Black Belgians and Flemish Giants. It is elegantly printed on fine paper, illustrated with numerous beautiful photo engravings, and is substantially bound. No one interested in Belgians can afford to be with out it. Send your order today. **Price, 25 cents**

88-00 **JOHN L. DAKIN, ROXBURY, MASS.**

Now is the Time you want Eggs

By feeding your fowls a little

BANNER EGG FOOD AND TONIC

your hens will lay lots of eggs, and you can double your profits, as this is the season of the year when fresh laid eggs are scarce.

REMEMBER, this TONIC does not force your hens to lay; it only brings them up to the pink of condition which is necessary for egg production.

TO THOSE who have never used it, we simply ask you to give it a trial, and be convinced.

PRICES: 1 lb. can, 25cts, by mail, 40 cts; 5 cans $1 on board Ex. at New York. 78-tf

THE OTSELIC EGG BOXES.....

I make the neatest, cheapest and best Egg Box on the market to-day, for shipping eggs for hatching. Over 10,000 settings were shipped in my boxes last year, and not one bad report. If packed according to directions which go with each box, there is no possible chance for eggs to get jarred or broken. My boxes are made of dressed pine with slide cover fastened with screws, handle on cover and pasteboard fillers on inside, made large enough to allow plenty of packing around each egg.

MY PRICES FOR 1901 ARE:

	PER DOZ.	PER 100.

The American Fancier

(J. H. Drevenstedt & Edward Bartlett.)

TYPOGRAPHICAL UNION LABEL FULTON COUNTY No 256

SATURDAY MAY 4 1901

From the Editor's Perch.

The Pittsburg show of 1902 will be held February 17 to 22 and will be pushed "to the limit." It is now one of the strongest and best exhibitions in the country.

***

The Dauphin County Poultry, Pigeon and Pet Stock Association will hold its next show during the week in which the annual meeting of the Pennsylvania State Poultry Society takes place, viz, January 21 to 25, 1902.

***

The next show at Detroit, Michigan, will be held either the last week in December or the first week in January.

***

The holding of the New York and Boston shows on the same dates is a gigantic mistake. All honorable means and sacrifices should be made to prevent a clashing of dates that can only work injury to both shows.

***

Charles T. Cornman has taken full possession of his poultry plant again and will devote it to the breeding of Exhibition Black Breasted Red Games and Game Bantams exclusively, and, needless to say, these will be bred "in the purple." Mr. Cornman has his sleeves rolled up and is determined to make the breeding of Standard Games a success in this country. He has seven yards of Standards and six yards of Bantams mated, and not a bird in the bunch that is not a high scorer. All his young stock have farm range. Mr. Cornman will also resume breeding Cocker Spaniels. We are indeed glad to see such a genuine fancier in harness again.

***

The writer of these notes is not in the habit of writing up new advertisers or new articles offered for sale. To handle them all would fill pages every week in the busy season. But we do feel like breaking a rule in calling attention to the advertisement of Charles Madeira & Co., Yalesville, Conn., on another page of this issue. And our reason for doing so is based on the fact that human nature is pretty much the same when it comes to practical comfort. Now, the above firm have placed upon the market what they call the "Little Giant Egg Opener." The latter opens fresh eggs, soft boiled, hard boiled, hot, hotter, Hottest eggs. No trouble to open them yourself. No more burnt fingers. No more fingers and egg shells mixed with your eggs. They are ornamental, finished in nickel, and silver plated inside. This is "nuff sed." As they cost only fifty cents, we believe we are committing no breach of journalistic etiquette in advising our readers to invest in an article that should do much to put their tempers in the sunshine class. For, to be candid, an egg is a comical thing to look at, but a serious thing to handle.

***

A. S. Carnahan, Banksville, Pa., is one of the best breeders of White Wyandottes in Western Pennsylvania and sticks close to the type, pure color and size of this popular fowl. He writes: "Egg trade very good this spring, have about all the orders I can fill promptly. The American Fancier is contributing its share."

***

The following special was sent to the Boston Globe, April 13th, from Bristol, Conn:

"Millionaire Lawson of Boston has had a representative in town purchasing fancy poultry for exhibition and blue ribbon purchases. It is stated that he secured about a dozen birds from George W. Mitchell, paying $1,000 and that $3,000 was offered for two pairs of Partridge Cochins. This is the breed that carried off the prizes at the Madison Square show. Lawson's buyer also secured another pair from a local fancier for $700."

Mr Lawson several years ago paid thirty thousand dollars for the carnation that bears his name, so evidently money is no object when he desires anything extraordinary to gratify his tastes. That Mr. Mitchell's Cochins are world-famous and bred to the highest standard is history. While the prices quoted appear to be extravagant and incredible it would not surprise us in the least if they came very close to the figures quoted in the newspaper dispatch.

***

Dr. Skerritt, Utica, N. Y., has retired from the fancy. He sold the Black Breasted Red Game cock "Ainscough King," winning first prize at New York in 1898 and sire of winning chicks in 1898 and 1899 at the same show, to Wm. Clarke, Brookfield, New York.

***

The Pet Stock Tribune, California, remarks:

"Recent advices from Buffalo and other eastern points are somewhat more favorable to the appointment of a judge or two of poultry and pet stock at the Pan-American Exposition from the Pacific Coast. To our way of thinking Western America is entitled to about five judges, one from Puget Sound, one from the San Francisco bay country, one from the Southwest, and two from the inter-Rocky Mountain states. By such a geographical distribution the breeders of a wide area would feel a closer and more direct interest in showing their stock at the forthcoming Pan-American poultry and pet stock show next October. We are also of the opinion that the Mid-West, the South, Mexico and the South and Central American States, Hawaii, and the Philippines should be represented. The exhibition should be Pan-American in fact as well as in name. Western America is bigger than Erie county or even than New York State, and don't propose to be snuffed out in any such manner. Southern California alone has made sufficient demonstration in the way of exhibits and patronage to be entitled to one judge, and she isn't at all backward in saying so."

There is not a shadow of doubt that the Pacific Coast is entitled to representation on the judges' list at the Pan-American, and we believe when the complete list of judges is announced California and the Pacific Coast will be represented.

***

The Poultry Number of Agricultural Advertising, published by the Frank B. White Co., Chicago and New York is a very handsomely gotten up book filled with instructive reading matter and a world of information regarding the poultry literature of the United States and Canada. The Frank B. White Co., handles the largest line of poultry advertising in the world, and their methods are based on strictly business principles.

***

The next Philadelphia show will be held in Convention Hall, one of the largest buildings in the United States, and the indications are that the Quaker City will see one of the largest and best shows of poultry, pigeons and pet stock in the country. Secretary James Cheston is at the helm and that means success.

***

One of the neatest and most business like pamphlets ever issued is that of Roycroft Farm, East Cleveland, Ohio. The proprietor of the latter, Mr. George G. Brown, is a thorough fancier and breeds White Wyandottes that are strictly in the "upper ten." His record at Cleveland and Chicago indicates the high quality of the stock. Besides this White Plymouth Rocks and Belgian Hares of the choicest blood are given the same excellent care and management as his favorite Wyandottes. The eagle eye of W. E. Wurts is on the flocks and that means results in mating, breeding, rearing and finishing second to none.

Lines of Improvement.

The inevitable desire of every breeder, by which indeed he is worthy to be accounted a breeder and lacking which he sinks to the rank of a mere raiser, is the improvement of his stock. The particular form in which this desire may express itself depends upon either the idiosyncracies or the circumstances of the individual.

There are two foundation lines of improvement, especially marked, dependent upon the idiosyncracies of the breeder, the perfecting of an already established breed and the creation of a new one. The greater number of breeders will naturally be found in the former class, because it, as a rule, yields immediate if not greater profits than the latter. To create a new breed requires a natural bent in that direction, an amount of patience and perseverance that but few men possess, and the deferring for some years of all profits, except such as may be derived from the sale of dead specimens. But immediate and continuous profits from the sale of exhibition specimens and breeding stock are compatible with a steady improvement of an established breed.

There are, also, two well marked lines of improvement dependent upon the circumstances of individual breeders, the improvement of exterior and interior qualities. The former is the recognized field of the fancier, the latter of the practical poultryman. The fancier seeks to perfect the exterior in order to render his fowls more beautiful, while the practical poultryman seeks to improve the interior qualities, that is, the laying and table properties, to render his fowls more profitable.

This dichotomous division can be carried still farther, for it relates to figure and color. Both the fancier and practical poultryman are interested in figure, for this is at once the expression of beauty and the index either of prolific laying or excellent table properties. In a less degree than the fancier, and yet in some degree, the practical poultryman is interested in color, because color is to some extent a mark of hardiness and also to some small extent a means of selling the feathers as well as making the flesh more saleable and more profitable.

It would be, of course, folly to suppose that the divisions above indicated are rigorously followed in actual improvements. As fanciers are to a greater or less extent practical poultrymen. and as practical poultrymen possess in a larger or smaller degree the attributes of fanciers, so the lines of improvement overlap each other in various manners and in varying degrees. The fancier may seek to improve the practical qualities of his fowls and the practical poultryman may strive to render his fowls more beautiful. And sometimes it is difficult to determine, so interwoven are the qualities, to which class, whether fancier or practical poultryman, an individual belongs.

The value of indicating lines of improvement consists in an appreciation and understanding of the directions in which improvements can be made, and thus laying the foundations for well directed efforts. It would be a waste of time and labor to attempt to accomplish the impossible. But if what is possible be known, then effort can be intelligently directed and substantial results can be obtained.

Understanding, then, the possible lines of improvement, it is for each one to determine which line or lines he will follow. It goes without saying, but nevertheless, owing to human nature, it ought to be said, that success will be more quickly attained if but a single line is followed. Breeders are too prone to scatter rather than to concentrate their efforts. They dislike to be thought of as men of one idea. But wherever is found an intelligent man of one idea, a man who determines upon doing a single thing and bends all of his efforts to that one thing, there will be found a successful man.

And it ought to be understood that a man of one idea is not necessarily a narrow man. All knowledge is related, and to thoroughly know one thing it is necessary to know something about a great many things. So that, paradoxical as it may seem, a man of one idea is a man of many ideas; a man, narrow in this sense, is a broad man in the true sense. Sensitiveness to the thought of being a man of one idea ought never to deter a breeder from that concentration of purpose necessary to the achievement of the most perfect success.

H. S. BABCOCK.

—E. C. Peixotto's article, "Paris Types," in the May Cosmopolitan, charmingly illustrated by the author, will interest those whose wish to see Paris has never been gratified, and at the same time arouse the pleasant recollections of former visitors. The fiction includes stories of love, adventure and humor by such well known writers as Julian Hawthorne, Hayden Carruth, Egerton Castle and H. G. Wells.

Stearns New Model No. 7

Ball Bearing Bone Cutter

Back Geared Three to One.

It is geared to save power, making it the easiest running, fastest cutting bone cutter ever built. It will cut anything a fowl will eat—green or dry bone, gristle, meat, corn or vegetables. Self-regulating. *It cannot be clogged.*

Green cut bone brings the young chick to maturity quicker than any other food. Our book, "How to Make Poultry Pay," explains how and why. Sent *free.*

E. C. STEARNS & CO.,

Box 12 Syracuse, N. Y.

Cambridge, Ohio.

W. C. Black Polish—Cock 1st, Burn; 2d, R. Middlemiss. Hen 1st, Middlemiss; 2d, Burn. Cockerel 1st, 2d, Middlemiss. Pullet 1st, 2d, Middlemiss; 3d, Burn.

Silver Polish—Cock 1st, Tozer; 2d, Burn. Hen 1st, 2d, Burn. Cockerel 1st, Bogue & Murray; 2d, Burn. Pullet 1st, Bogue & Murray.

Golden Polish—Cock 1st, Brown; 2d, Nahrgang; 3d, Bogue & Murray. Hen 1st, Nahrgang; 2d, Tozer; 3d, Bogue & Murray. Cockerel 1st, Burn; 2d, Bogue & Murray. Pullet 1st, Tozer; 2d, Bogue & Murray; 3d, Burn.

A. O. V. Polish—Cock 1st, Burn; 2d, Tozer; 3d, Bogue & Murray. Hen 1st, Tozer; 2d, Burn; 3d, S. S. Bantams—Cock 1st, Bogue & Murray; 2d, White. Hen 1st, White; 2d, Burn. Cockerel 1st, Bogue & Murray; 2d, White; 3d, Burn. Pullet 1st, Tozer; 2d, White; 3d, Bogue & Murray.

White Cochin Bantams—Cock 1st, Hartley; 2d, Tozer; 3d, Bogue & Murray. Hen 1st, Emrick; 2d, Hartley; 3d, Bogue & Murray. Pullet 1st, Emrick; 2d, Hartley; 3d, Broome.

Black Cochin Bantams—Cock 1st, Kiley; 2d, Tozer. Hen 1st, Kiley; 2d, Hartley; 3d, Tozer. Cockerel 1st, Kiley; 2d, Hartley; 3d, Tozer. Pullet 1st, Kiley; 2d, Tozer; 3d, Hartley.

Buff Cochin Bantams—Cock 1st, Bogue & Murray; 2d, Nahrgang; 3d, Mahler. Hen 1st, J. Cameron; 2d, Bogue & Murray; 3d, Nahrgang. Cockerel 1st, Bogue & Murray; 2d, Hartley; 3d, Plante & Co. Pullet 1st, Cameron; 2d, 3d, Plante & Co.

African Bantams—Cock 1st, Tozer; 2d, Hartley; 3d, Nahrgang. Hen 1st, Tozer; 2d, Nahrgang; 3d, Hartley. Cockerel 1st, Hartley; 2d, 3d, Emrick. Pullet 1st, Hartley; 2d, Nahrgang; 3d, Emrick.

Japanese Bantams—Cock 1st, Burn; 2d, Tozer; 3d, Mahler. Hen 1st, Burn; 2d, Tozer; 3d, Mahler. Cockerel 1st, Burn; 2d, Tozer. Pullet 1st, Tozer; 2d, Burn.

A. O. V. Bantams—Cock 1st, McIntyre; 2d, Tozer; 3d, Bogue & Murray. Hen 1st, McIntyre; 2d, Burn; 3d, Tozer. Cockerel 1st, McIntyre; 2d, Tozer; 3d, Burn. Pullet 1st, McIntyre; 2d, Tozer; 3d, Burn.

Rouen Ducks—Old male 1st, 3d, Colwell; 2d, Burn. Young male 1st, Burn; 2d, 3d, Colwell. Old female 1st, Burns; 2d, 3d, Colwell. Young female 1st, 3d, Colwell; 2d, Burn.

Bogue & Murray. Pullet 1st, Tozer; 2d, Bogue & Murray; 3d, Burn.

B. B. Red Game—Cock 1st, Garside; 2d, Hawthorne; 3d, Nahrgang. Hen 1st, McIntyre; 2d, Garside; 3d, Hawthorne. Cockerel 1st, 2d, Hawthorne. Pullet 1st, 2d, Garside; 3d, Hawthorne.

Pile Game—Cock 1st, Colwell; 2d, McIntyre; 3d, Garside. Hen 1st, McIntyre. Cockerel 1st, Garside. Pullet 1st, McIntyre; 2d, Garside.

Duckwing Game—Cock 1st, Colwell. Hen 1st, Garside; 2d, Colwell; 3d, Nahrgang. Cockerel 1st Colwell.

Cornish Indian Game—Cock 1st, Cox; 2d, McMichael; 3d, Cheevers. Hen 1st, Cox; 2d, Cheevers. Cockerel 1st, Cox. Pullet 1st, Cox; 2d, McMichael.

A. O. V. Game—Cock 1st, Tozer; 2d, Burn; 3d, Bogue & Murray. Hen 1st, Tozer; 2d, Garside. Cockerel 1st, 2d, Kiley; 3d, Nahrgang. Pullet 1st, 2d, Kiley; 3d, Nahrgang.

A. O. V. Fowls—Cock 1st, Bogue & Murray; 2d, Burn; 3d, Tozer. Hen 1st, 2d, 3d, Bogue & Murray. Cockerel 1st, Minshall; 2d, Bogue & Murray; 3d, Burn. Pullet 1st, 2d, 3d, Bogue & Murray.

B. B. Red Bantams—Cock 1st, Tozer; 2d, McCormick; 3d, McIntyre. Hen 1st, McIntyre; 2d, Tozer; 3d, Colwell. Pullet 1st, Thomson; 2d, McIntyre; 3d, Tozer.

Pile Bantams—Cock 1st, McIntyre; 2d, Hartley. Hen 1st, McIntyre. Cockerel 1st, Colwell; 2d, McIntyre. Pullet 1st, McIntyre; 2d, Colwell; 3d, Hartley.

Duckwing Bantams—Cock 1st, Kiley; 2d, Tozer; 3d, McIntyre. Hen 1st, McIntyre; 2d, Kiley; 3d, Tozer. Cockerel 1st, McIntyre; 2d, Colwell. Pullet 1st, McIntyre; 2d, Colwell.

Golden Sebright Bantams—Cock 1st, Tozer; 2d, Pickard & Cullen. Hen 1st, Pickard & Cullen; 2d, Tozer; 3d, Mahler. Cockerel 1st, Bogue & Murray; 2d, Tozer; 3d, Plante & Co. Pullet 1st, Bogue & Murray; 2d, Tozer; 3d, Pickard & Cullen.

Aylesbury Ducks—Old male 1st, 2d, Colwell; 3d, Lunn. Young male 1st, 3d, Colwell; 2d, Burn. Old female 1st, Colwell; 2d, Burn; 3d, Lunn. Young female 1st, 3d, Colwell; 2d, Burn.

Pekin Ducks—Old male, 1st, 2d, Colwell; 3d, Lunn. Young male 1st, 2d, Colwell; 3d, Thompson. Old female 1st, 2d, Colwell; 3d, Lunn. Young 1st, 2d, Colwell; 3d, Lunn.

A. O. V. Ducks—Old male 1st, Bogue & Murray; 2d, McCormick; 3d, Burn. Young 1st, Burn; 2d, Bogue & Murray; 3d, McCormick. Old female 1st, Bogue & Murray; 2d, McCormick; 3d, Burn. Young 1st, Bogue & Murray; 2d, Burn; 3d, McCormick.

Bremen or Embden Geese—All to Colwell.

Toulouse Geese—All to Colwell.

China Geese—Old male 1st, Colwell; 2d, Thompson. Young male 1st, Thompson; 2d, Colwell. Old female 1st, Colwell; 2d, Thompson. Young female 1st, Thompson; 2d, Colwell.

A. O. V. Geese—All to Burn.

Bronze Turkeys—Old male 1st, J. A. Henderson. Young male 1st, Thompson; 2d, Henderson. Old female 1st, Henderson; 2d, Thompson. Young female 1st, Henderson; 2d, Thompson.

White Turkeys—Old male 1st, Colwell.

PIGEONS.

Black or Dun Carriers—Cock 1st, 2d, White; 3d, Nahrgang. Hen 1st, 2d, White; 3d, Nahrgang.

A. O. V. Carriers—All to White.

Black or Blue Pouters—Cock 1st, 2d, White. Hen 1st, Burn; 2d, Nahrgang; 3d, Digby & Champion.

White Pouters—Cock 1st, Wangenheim; 2d, Nahrgang. Hen 1st, Wangenheim; 2d, Nahrgang; 3d, Plante & Co.

A. O. V. Pouters—Cock 1st, Nahrgang. Hen 1st, Nahrgang; 2d, Wangenheim.

Long Face Tumblers—Cock 1st, Nahrgang; 2d, 3d, Wangenheim. Hen 1st, Nahrgang; 2d, 3d, Wangenheim.

Short Face Tumblers—Cock 1st, McPhie; 2d, Nahrgang. Hen 1st, 2d, Nahrgang; 3d, McPhie.

Parlor Tumblers—Cock 1st, Nahrgang; 2d, Wangenheim; 3d, Plante & Co. Hen 1st, Plante & Co; 2d, Nahrgang; 3d, Wangenheim.

Red or Yellow Jacobins—Cock 1st, 2d, Wangenheim; 3d, Nahrgang. Hen 1st, Nahrgang; 2d, 3d, Wangenheim.

A. O. V. Jacobins—Cock 1st, 3d, Wangenheim; 2d, Nahrgang. Hen 1st, Nahrgang; 2d, 3d, Wangenheim.

Antwerps—All to McPhie.

White Fantails—Cock 1st, Burn; 2d, Plante & Co; 3d, Nahrgang. Hen 1st, Burn; 2d, 3d, Wangenheim.

Blue or Silver Fantails—Cock 1st, Plante & Co; 2d, Burn. Hen 1st, Nahrgang; 2d, Burn.

A. O. V. Fantails—Cock 1st, Wangenheim; 2d, Nahrgang; 3d, Burn. Hen 1st, Burn; 2d, Wangenheim; 3d, Nahrgang.

A. O. C. Barbs—All to Nahrgang.

A. O. V. Trumpeters—Cock 1st, Wangenheim; 2d, Nahrgang. Hen 1st, Nahrgang.

A. C. Turbits—Cock 1st, Nahrgang; 2d, Plante & Co.; 3d, Wangenheim. Hen 1st, Wangenheim; 2d, Plante & Co; 3d, White.

Archangels—Cock 1st, Wangenheim; 2d, White; 3d, Burn. Hen 1st, Burn; 2d, Wangenheim; 3d, Nahrgang.

English Owls—All to Wangenheim.

African Owls—Cock 1st, Nahrgang; 2d, Wangenheim; 3d, White. Hen 1st, 2d, Nahrgang; 3d, White.

Show Homers—All to McPhie.

Blue or Silver Dragoons—All to Wangenheim.

Checkered Dragoons—All to Wangenheim.

Swallows—Cock 1st, Plante & Co; 2d, Nahrgang; 3d, Wangenheim. Hen 1st, McPhie; 2d, Plante & Co; 3d, Wangenheim.

Black Magpies—Cock 1st, Nahrgang; 2d, 3d, Wangenheim. Hen 1st, Nahrgang; 2d, 3d, Wangenheim.

A. O. V. Magpies—All to Wangenheim.

Flying Homers—Cock 1st, 3d, Orr; 2d, McPhie. Hen 1st, McPhie; 2d, 3d, Orr.

Story's Minorca Philosophy.

Editor American Fancier: Having been asked for my opinion on size, back and comb of Minorcas and furnishing the readers of the American Fancier with the same in an article in January 29th issue, I did not think at the time I was to stir up a controversy, but having stirred one up, I had thought to reply to our friend Maunder in his wanderings, but it seems I was anticipated by a kind friend (M'g'r. L.K.P.Y.), who helped me out in an article in the American Fancier of February 23rd, which verifies my description of the Minorca's size, back and comb. [I beg to say just here that I do not propose telling your readers who M'g'r. L. K. P. Y. is, as Mr. Maunder did without knowing.] Even this description, which I claim is our only guide, does not seem to satisfy our English critic, so I have determined to get in the game.

Our American Standard of Perfection suits me. Under instructions to judges I find size shall be determined by comparison. The largest bird, other things being equal, shall win in all varieties having a section denoted size and not being subject to weight clauses. The Minorca class has a weight clause. Some of our judges give all attention to the "largest bird winning" and overlook the good points of a bird up to or just over standard weight. Back—Long, broad, and slanting evenly to the tail. I have no fault to find with this. Comb—I am very glad the American Poultry Association has changed the standard to six points to comb of Minorcas from five. A proper comb on a Minorca with six points is enough for any size bird. I would not have, by choice, seven or eight points, as Mr. Maunder says. It is too much like a fine tooth comb, good to be used for other purposes than to be looked at on the head of a Minorca cock. I do agree with Mr. Maunder on one thing, where he says the man with a practical experience on the subject under consideration is a better entertainer than the man with the theoretical hobby.

In closing, will suggest that if our American Standard of Perfection does not suit Mr. Maunder he had better

WHERE OUR CANARIES ARE RAISED.

The Ladies' Home Journal has commissioned Ida Sharper Hoxie, the well-known author, to go to the German Harz Mountains and write of the raising and training of canary birds. She will proceed to St. Andreasburg, "The Singing Village of Germany," where 60,000 canaries are reared every year, and spend some time in the home of one of the most successful breeders of these peerless singers, gathering material for the article.

—Pigeon men and hen men should push the American Fancier. Advertisers claim they get better results than from any other paper.

—Advertise in the American Fancier.

return to Old England, where he can breed Minorcas with large combs, so heavy that it is a burden for the bird to hold up his head. As for color, he can breed the "sooty black" and I will continue on the greenish sheen. I have not yet gone to the expense of buying green ink to use in answering my Minorca correspondence to make my customers think I am Irish. My forefathers came to this country about the year 1635 and I have been breeding Minorcas since 1894, and have tried to be contented and happy with five or six serrations to the comb, size large enough to carry the prescribed 8 lbs. for cock, 6½ lbs. for hen, 6½ lbs. for cockerel, and 5½ lbs. for the pullet, without being a small fat bird; back, long, broad, slanting evenly to the tail, with other things as required by our American Standard of Perfection. I should be very glad to meet some of Mr. Maunder's best specimens at New York's next exhibit.

Go back to "Bonnie England" if our guide is not the best,
I'll stand by "Old America" and its rules which make the test;
Its rules and regulations I'll follow to the letter,
And of the two, all will agree, our Minorca is the better.

ROWLAND STORY.
187 Arlington Ave., Brooklyn, N. Y.

East Palestine, Ohio.

JANUARY 8 TO 11.

EXHIBITORS.

John Atchison, John Archibald, J. J. Bushong, Carl Beyer, Fred. Campbell, Louis A. Duchez, C. F. Early, Thos. Green, Wm. Haught, David Jenkins, Robert Flemming, C. W. Hamilton, Hirsch & Lewis, James Jones, Wm. E. Kiser, Carl Loschinskey, Butler Peterson, Harry G. Paxson, F. W. Reese, Grant Reagle, W. M. Reagle, F. W. Smith, S. K. Todd, J. H. Whittenberger, Park Whittenberger, all of East Palestine; Harry W. Allison, M. A. Bowles, Albert C. Yengling, Salem, Onio; C. F. Butts, North Jackson; Harry S. Buxton, G. E. Cress, David Felger, N. E. Heck, Unity; F. W. Calvin, Washingtonville; George Dobbs, Jr, Vanport, Pa.; Thomas J. Green, Columbiana; G. H. Hilderbrand, Jr., Emsworth, Pa.; P. G. Jewell, W. W. Officer, John W. Powers, Girard; W. H. Owens & Sons, Clarkson; Mahlon Morris, Signal.

AWARDS.

Light Brahmas—Butler Peterson, cock 2d 89½, hen 1st 93, pullet 1st 91¼, 2d 89, 3d 88¾, 4th 86¾, pen 1st.

S. G. Dorkings—W. H. Owens & Sons, cock 1st 94½, hen 1st 94½, 2d 93, cockerel 1st 92½, 2d 91¾, pullet 1st 95, 2d 95, 3d 94¼, 4th 93¾, pen 1st.

Pit Game—All to Harry W. Allison.

S. S. Hamburgs—John Atchison, cock 2d 88½, hen 1st 94½, 2d 93¾, 3d 93½, 4th 93, cockerel 1st 91¾, pullet 1st 93¾, 2d 92½

White Indian Game—Harry G. Paxson, cock 1st 91½, hen 1st 91, pullet 1st 91¼, 2d 91, 3d 89, 4th 88, pen 1st.

Rhode Island Reds—All to F. W. Calvin.

Brown Leghorns—J. H. Whittenberger, cock 1st 90½, hen 1st 92, 2d 91¾, 3d 91½, 4th 91¼, cockerel 1st 92¼, 2d 92, pullet 2d 93½, 4th 93¼, pen 1st. Park Whittenberger, cockerel 4th 91½, pullet 1st 94, pen 2d. W. M. Reagle, cockerel 3d 92, pullet 3d 93¼. Morris, pen 3d.

White Leghorns—W. M. Reagle, cockerel 1st 93½, pullet 1st 95½, 2d 94¼, 3d 94¼, 4th 93. pen 1st.

R. C. White Leghorns—W. W. Officer, cockerel 1st 91½, pullet 2d 94, 3d 93¼.

Buff Leghorns—M. A. Bowles, cock 1st 90¼, hen 1st 93½, 2d 93, 3d 92¾, cockerel 1st 92½, 3d 91¼, pullet 1st 95, pen 2d. Owens & Sons, hen 4th 91½. Heck, cockerel 2d 92¼, 4th 91¼, pullet 2d 94¾, 3d 94½, 4th 93¾, pen 1st.

Black Minorcas—Bushong, hen 1st 92, pullet 1st 94¾, 2d 94½, 3d 94½, 4th 93¾. J. H. Whittenberger, cockerel 1st 92½. Dobbs, cockerel 2d 90½. Archibald, cockerel 3d 90.

Barred P. Rocks—Butts, hen 1st 91½, cockerel 1st 91¼, 3d 90, 4th 89½, pullet 1st 91½, 3d 90. W. M. Reagle, cockerel 2d 91, pullet 2d 91¼, pen 1st. John W. Powers, hen 2d 91¼, 4th 89. Frank Smith, hen 3d 90. Cress, pullet 4th 89¾, pen 3d.

Buff P. Rocks—Early, cock 2d 9 , hen 2d 92¼, 3d 90¾, cockerel 1st 90½, pullet 1st 93. 2d 92½, 3d 92¼, 4th 92, pen 1st. Cress, cock 3d 86½, hen 1st 92½, 4th 90 Green, cock 1st 90¾. Todd, cockerel 2d 89½, 3d 89½, 4th 88¼, pen 2d. Hilderbrand, cock 4th 86¼.

White P. Rocks—Hilderbrand, cock 1st 91, hen 1st 93¼, pen 3d. Hamilton, cockerel 2d 90, pullet 1st 93½, 2d 92, 3d 91¾. pen 2d. Jewell, cock 2d 89½, hen 2d 92½, 3d 91¾, 4th 91¼, cockerel 1st 93¾, 3d 89¾, pullet 4th 91½, pen 1st

Buff Orpingtons—All to Haught.

W. C. Black Polish—David Felger, 1st cock.

W. F. Black Spanish—Reese, cock 2d 89¼, hen 1st 91, pullet 1st 91¼, 2d 91, 3d 90¼, pen 1st.

Buff Wyandottes—Early, cock 1st 90¾, 2d 93½, 3d 93, 4th 93, cockerel 1st 92, 2d 91½, 3d 91, pullet 2d 93¼, 3d 93¼, 4th 93, pen 1st. Todd, hen 1st 94, pullet 1st 94¼

Golden Wyandottes—Owens & Sons, cock 1st 90¼, hen 1st 92, 2d 88¾, cockerel 1st 91¾, 2d 89¼, pullet 1st 92½, 2d 92¼, 3d 92, 4th 91, pen 1st.

S. L. Wyandottes—Owens & Sons, cock 1st 90, hen 2d 89½, 3d 89½, cockerel 1st 91, 3d 88¾, pen 2d. Dobbs, cock 2d 88½, hen 4th 88¼. Reagle, cockerel 2d 90, 4th 88¼, pullet 1st 93¾, 2d 92¾, 3d 92, 4th 91½, pen 1st.

White Wyandottes—Owens & Sons, hen 1st 94½, cockerel 3d 92, pullet 1st 95¾, 4th 93¾. Hamilton, cockerel 1st 93, pullet 2d 95¼, pen 1st. Calvin, cock 1st 92¾, hen 2d 93¼, 3d 92¾, cockerel 2d 92½, pullet 3d 94, pen 2d. Butts, cockerel 4th 91¾.

GILSEY HOUSE
BROADWAY, COR. 29th ST.
NEW YORK CITY.

349tf

Partridge Wyandottes—All to Early.

Buff Cochin Bantams—Flemming, cock 3d 87.

White Cochin Bantams—Officer, cock 1st 95, cockerel 1st 93½, pullet 1st 95¼, 2d 94½, 3d 94½.

B. B. Red Game Bantams—Jenkins, hen 1st 92½, cockerel 1st 91, pullet 2d 88. Green, cock 1st 94, hen 2d 90½.

Toulouse Geese—Buxton, gander 2d 88½.

Belgian Hares—Reese, 1st on immature buck, 2d on doe. Yengling, 1st on adult buck, 2d on doe; 2d, 3d, 4th on immature buck; 1st, 3d, 4th on doe. Campbell, 2d on adult buck, 3d on doe. Duchez, 3d on adult buck, 1st on doe.

Homer Pigeons—Jones, cock 1st, hen 2d. Beyer, cock 2d, 3d, hen 1st. Lewis & Hirsch, hen 3d.

Jacobin Pigeons—All to Beyer.

Dragoon Pigeons—All to Beyer.

Fantail Pigeons—All to Beyer.

Golden Wyandotte Club.

At a meeting of Golden Wyandotte breeders, held January 26th, 1901, in the Coliseum, Chicago, the American Golden Wyandotte Club was organized, with Robt. E. Jones, Flat Rock, Indiana, as president; W. A. Doolittle, Sabetha, Kansas, as first vice-president; J. S. Wray, London, Canada, as second vice-president; A. L. Rings, 333 Rookery Building, Chicago, as secretary and treasurer; Ira C. Keller, Prospect, Ohio, as chairman of the executive committee.

The objects of the club as stated are as follows:

First. To bring the merits of the Golden Wyandotte fowl before the public and secure notice of the breed in poultry journals and the premium lists of poultry shows.

Second. To further in legitimate ways the interest of club members in breeding the Golden Wyandotte fowl.

Third. To encourage by united action the breeding and exhibition of the Golden Wyandotte fowl in every state, territory, province and country on the American Continent.

It was resolved that the chairman of the executive committee select one vice-president from the Golden Wyandotte breeders of each state and forward such names to the secretary for publication.

It was resolved that each state vice-president should have control of all matters concerning the shows (of this fowl) within his own state, and that a copy of all premium lists, with report of awards of each show held, be by the vice-president sent to the secretary to be filed for reference, and awards concerning the Golden Wyandotte fowl be included in the secretary's annual report.

The initiation was fixed at $1.00, the same to accompany the application for membership. The dues were fixed at $1.00 per annum, payable in advance.

It was resolved that the American Golden Wyandotte Club offer in each state having twenty members who have paid in advance annual dues for the current year a special prize cup (fully engraved) at such show as a majority of members may agree upon.

It was resolved that Golden Wyandotte breeders make a united effort to present an unequalled exhibition of this fowl at the great shows of Buffalo, Boston, Chicago and New York for the season of 1901.

Application for membership and payment of dues can be made to the secretary and treasurer, A. L. Rings, 333 Rookery Building, Chicago, Ill. Copies of the by-laws may be had upon application.

—Look at our show reports during the season. They alone are worth double the price of subscription.

—Advertise in the American Fancier. Good results will follow.

Breeding and Preparing Buff Leghorns for the Show-Room.

Having been asked to write an article on numerous occasions on the above subject, I will state my views as my experience has taught me, and I do not write this to get into or enter a controversy with those who may differ with me. The most essential thing for the breeder of thoroughbred poultry to have who contemplates breeding exhibition stock and showing it is good, strong, vigorous stock birds for a foundation, and in the Buff Leghorns I think we have it, as who ever saw a sick Leghorn if it were given half a chance for its life. Leghorns do not sit around as some of the larger breeds do, and we all know industry is health, and the healthy bird produces the eggs with a strong germ that produces a chick full of vigor. And in the Buff Leghorn I claim we have all of these qualities. It is conceded by all the Buffs are the largest of the Leghorn family, and it is still conceded that the Leghorns have no equals as egg producers. And still, again, I claim the buff color has more admirers than any other two colors combined.

The breeders of Buff Leghorns have set the pace for the past year or two for the other buff varieties, and in the next year to come I look for a still greater improvement. The question of which is the proper shade of buff, or which is the most beautiful shade, I will leave for those who are more experienced in the English language to explain than myself. There is always a difference of opinion to be found among our best breeders, and I believe it is an honest one, as to what is the best kind of a bird to use to produce "crack" show specimens, so, as I said before, everyone must work that out for themselves. I have my opinion, but the reader will have to come to Watertown to get it, as he then can see exactly how I get my show specimens. Assuming that we have the chicks hatched ready to go with the hen or put in the brooder, and good healthy chicks are raised both ways, and more are raised when the incubators and brooders are used. The very first, the last, and the thing to think of all the time is the health of the young stock, and that means keep them free from lice, give them plenty of cool fresh water, and the very best feed you can buy. If in the brooder, do not forget the grit. I have always thought my farm raised stock the best, as they seemed to mature quicker than those raised in the city, and for the past two years I have had all my stock on the farm. The birds that grow right along from the start are the ones to watch, as their plumage is generally of a better quality; so, in other words, I believe the birds that have a free range in the country, other things being equal, are superior to the city lot raised fowl. Now, when the cockerels begin to mature enough to bother the pullets, separate them, and at this time begin to separate your most promising birds from the different flocks, as the bird to win at either our New York or Boston shows must be nicely handled just as soon as it shows or gives promise of being an exceptional specimen, and when I say nicely handled, I mean get your birds so you can go in their pens without their flying about. Be careful when you are working around them, get them tame, and in a short time you will note a wonderful improvement in the appearance of the young stock. You can tell a fancier just as sure as the sun rises and sets by the way his stock appears when he is handling them.

The Buff Leghorn does not need to have an especially shaded place to run in in order to preserve or bring out its grand color to its best. I believe that the color must be imparted from the parent stock. With me, I seldom take my exhibition birds from the run until a short time before the shows begin, as I am a great believer in nature as a conditioner, thinking, as I do, that we cannot improve on but only assist it.

We will say that it is but a short time before we must send the birds away for the judge to criticise. Now is the time to use your brains. Some of your best birds will go to pieces in spite of all you can do. The change from the range to cooping will oftentimes throw our best out of condition, especially the nervous birds, and let me say right here that there is as much difference in birds as in people. Study every individual specimen and work accordingly; do not try to handle them all alike if you expect to reach the pinnacle of condition with them all. At this time the feeding is about the most important point to watch, as you can readily see the birds have to undergo quite a change from the run to the exhibition coop. I have heard people say they cooped their birds from six weeks to two months before they sent them off to the shows. But I say that to coop a bird for that length of time is enough to ruin any bird for a breeder, as it will greatly impair his vigor. From ten days to two weeks is plenty long enough if the birds have been reared properly.

Now we come to show condition. Many a good bird I have seen beaten simply because he was not at his best. Wash their faces, combs and lobes and their plumage if it is soiled, and by all means their shanks and feet; get the dirt out between the scales. To a person that has never done these things I will say, next year do it and see if your birds do not surprise you in appearance. Many a Leghorn and Minorca is spoiled before it ever reaches the show-room by being over heated and having its comb go over. The moral here is, do not crate the birds so they will be too warm, or if you should, condition them in a warm place.

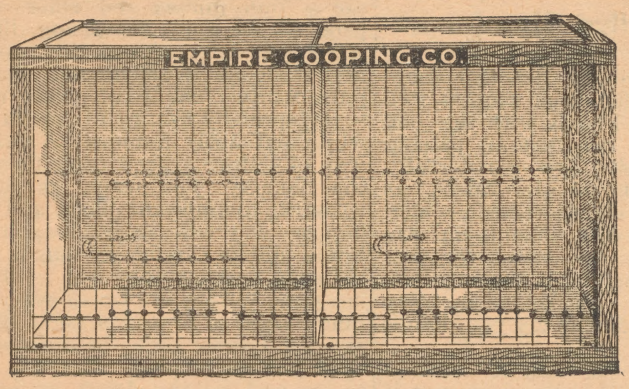
When you ship the bird away give him room enough in his crate so that he can stand natural if you expect him to be at his best during the show. Too many birds land in the show-room all cramped up, many of them "cracks," and lose simply because they cannot get themselves together, as it were, before it is time for the judge to begin his work. I invariably accompany my birds to the different shows, so as to be on the spot to assist them all I can to be at their best (as I do not like to show one only when it is at its best) and for the education I get out of it, or, in other words, to see how good the other fellow has his birds and any other "pointers" I can get that will be to my advantage in the future.

In closing this article I must say a word on the utility side for the Buff Leghorn. I believe they mature quicker than any other variety of Leghorns, and as I said before, they are conceded by all to be larger and will lay as many eggs as any breed of fowls in existence.

Now, a word to the breeders of Buff Leghorns who are not members of the American Buff Leghorn Club. Join the club. You owe it to yourself and the breed to advance it in every way. As the old saying is, "In unity there is strength." The demand for Buff Leghorns the past year has been greater than ever before, and we can by each giving a little of our time have the largest specialty club in America. The initiation fee of $1 and annual dues of $1 are so small that no breeder can afford not to become a member. Our secretary, George S. Barnes, of Battle Creek, Mich., is a wide-awake fancier and a worker, and I invite every breeder of Buff Leghorns in America and those interested in their welfare to send to him for membership blanks and become members of the club.

HARRY M. LAMON.
Watertown, N. Y.

OUR PRINTING SUITS.



The catalogues arrived last Friday and are very satisfactory indeed. A very good job. You may count on all of my work in the future.

The Minorca.

Of kinds of chickens there are many score—
The Americans, Asiatics, and many more;
And all their kinds and their seeds
Bring forth the many different breeds.

I'll pen a verse about their classes,
Although to mention all, in fact, masses;
We'll start with one and find later,
Minorcas first, because she's "the crater."

Of all the birds I have seen
She's the lovely "chicken queen."
Her style and carriage wins the test
When all the others are at their best.

She has the modest, queenly air,
With her no other can compare;
She's kind and true at every need
And her eggs are fruitful seed.

Cash on them brings forth double,
With no extra care or extra trouble;
To be better judge send me an order;
Make small limit, just the border.

Since '94 I've watched and cared,
And for her wants she well fared;
And my friends who gave a trial
Agree with me and make no denial

That cash and fruit, which was result,
Was good investment, not difficult;
If you want their names and place
I'll send you letter and on it trace

How much they tried and their gain
And full address and their names,
Then you can write and you find out
If she's not "queen" without any doubt.

In next issue I'll send you more
And treat of others of the score;
Minorcas first, she has my voice,
And of all the others she's my choice.

ROWLAND STORY.
187 Arlington Ave., Brooklyn, N. Y.

The New Crusade Against the Score Card.

To the Breeders and Exhibitors of Thoroughbred Poultry of America, Greeting: On February 7th, an organization was formed, the object of which can be plainly seen by the name they have adopted, namely, The Anti-Score Card Club of America. The dissatisfaction arising by the use of the score card makes itself manifest when and wherever it is applied. It makes no difference who the judge may be, it "sticks" the best of them. The fallacy of the score card system is apparent to most all exhibitors, even to those of limited experience, and as it is believed that this opinion is quite general all over the country, the organizers of this club anticipate a large membership in the near future. We have enrolled as members some of the foremost breeders and exhibitors of our state, so this, our first appeal, is made to all who are of our mind of thinking; join us, send in your name to the undersigned. We do not ask for an initiation fee or dues; there are none. The only conditions are that you must be interested in thoroughbred poultry and sending in your name. It matters not where you reside, membership is not confined to any particular part of the country. Any suggestions you may have to offer in the interest of our cause will be cheerfully received. The drafting of by-laws for the guidance of the club is well under way, and will be published in the May poultry papers. For full particulars address T J. Kinney, Secretary, corner Brainerd and Edgerton Streets, St. Paul, Minn.

Sale of Silver Wyandottes.

This is to certify that I have sold my entire stock of Silver Wyandottes to W. B. Richardson, Cranston, R. I. This includes several prize winners and the cream of 18 years' careful breeding.

IRVING CROCKER.
Seneca Falls, N. Y., April 30th, 1901.

PAYS BETTER THAN ALL OTHERS.

Editor American Fancier: We guess not! Discontinue our advertisement in the American Fancier? Not while we breed poultry, for it pays us better than all others we ever advertised in.

WOOD & FREEMAN.
Fitchburg, Mass., Jan. 7th, 1901.

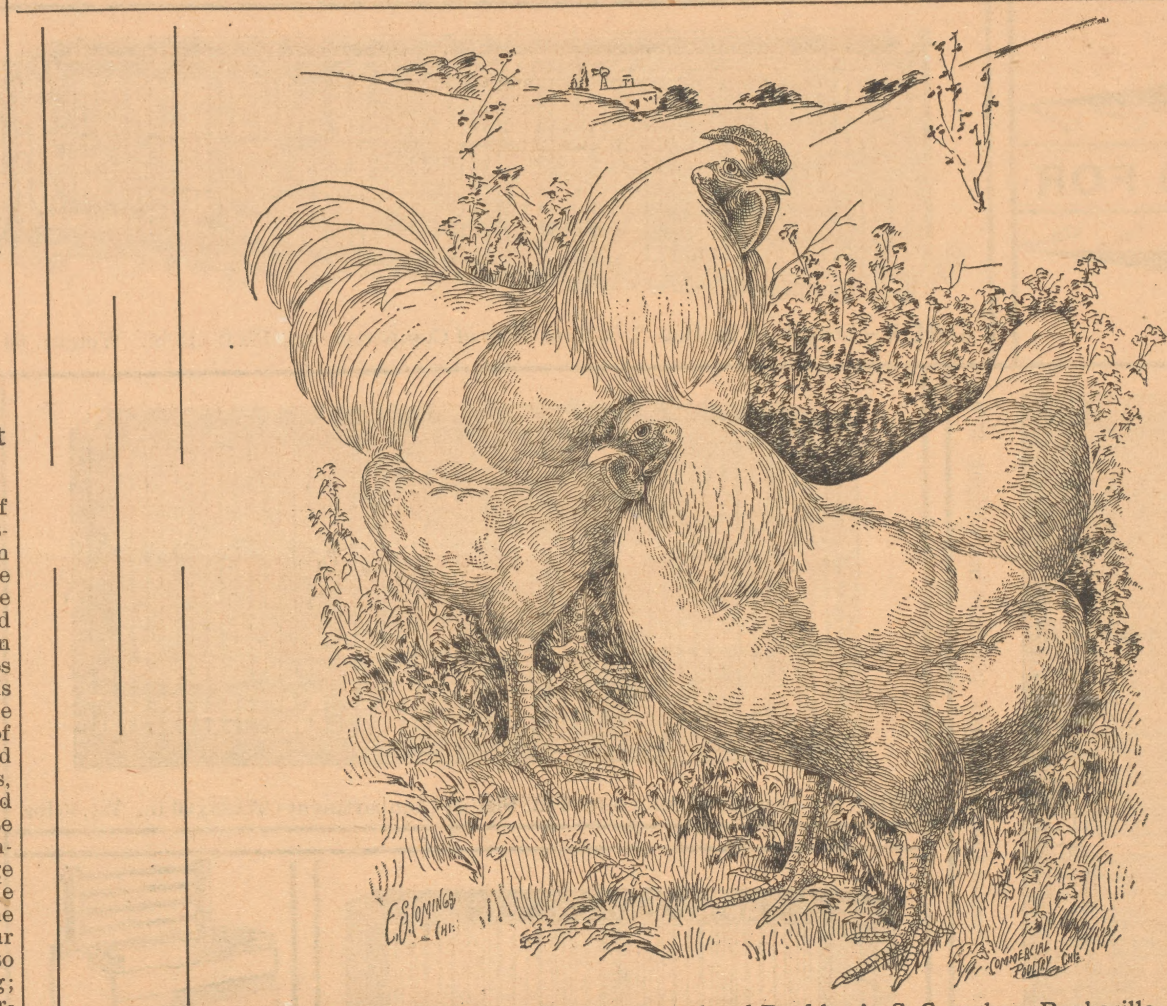
How Dominiques Are Scored.

Editor American Fancier: If you think it of any value, I should like to see the following experiences of mine in your paper, but having seen so much on the same line, perhaps you may think it has worn thread-bare, so I shall not feel hurt if I fail to see it in print. The case is this, an American Dominique hen exhibited at two places less than four weeks apart, same judge, hen in same condition except a gain of ½ pound in weight at time of last show. Card No. 1 reads, "cut on condition, weight and size 1½, comb 2, head etc., 1, neck 1½, back 1, breast ½, body and fluff ½, wings 1, tail 1; total 90." Card No. 2 reads, "cut on condition, weight and size ½, comb 2, head etc., 1, neck 1½, back 1½, breast ½, body and fluff ½, wings 2, tail 1½, legs and toes ½; total 88½." It will be seen that she was credited with the gain in weight and cut alike on comb, head, neck, breast, body and fluff, and cut ½ more on back, 1 on wings, ½ on tail, ½ on legs and toes, a total of 2½ points, then if she had made no gain in weight she would now stand credited with 87½, the most noticeable cut on wings, a whole point over the first card which was very strong in the first case, as was the first cut on back, and if the legs and toes were all right at the first show, they were the same at the last. To make it still more plain I will give the score of the same hen by the same judge the year previous: Cut on condition weight 1, comb 1½, head etc., ½, neck 1, back ½, breast ½, wings 1, tail 1, legs and toes ½; total 92½. I will say further, as the hen had gained ½ point in weight at time of last show and was very noticeably better in color than on the previous year, she should have scored 93 at least, instead of 88½ (she also holds a pullet record by this same judge of 92.) I will still further say that she was by far the best American Dominique hen exhibited at the last mentioned show, and the only one I had there, several others competing, and she was scored the highest. She was called the best of several at a fair last fall, by I. K. Felch. I could give a similar experience with a cockerel but this is enough for this time. Now if a person unacquainted with the breed had attended the two last named shows to gain a knowledge of the breed in question, what would he have learned? If she had been judged by comparison she would have easily taken first at the last show, and I think the person would have learned more, as in the first case he would be in doubt about what a first-class specimen ought to be.

C. N. PAIGE.
Francestown, N. H., April 25th, 1901.

Golden Penciled Hamburgs.

For breeding Golden Penciled show cockerels and pullets you require two distinct pens, and I begin with the cock breeding pen. I may say in passing that Gold Pencils are wonderfully popular, especially in the towns, as their great beauty and their color, which does not show the dirt, make them very general favorites. In getting together a pen of Gold Pencils you want to look out for a first-rate cock, one of the very best show cocks you can lay your hands on.



To begin with the tail, it seems I know the wrong end to begin at, but it is right from a Hamburg breeder's point of view. Select a cock with a very sweeping and heavily-feathered tail with abundance of furnishing. See that each of the sickles and side hangers is, if possible, finely and evenly laced all round with gold. The finer and evener the penciling in the tail the more valuable the cock. Some people seem to like broad and heavy lacing, what we call a "gay" tail, but I am not of the number. True, a very finely edged tail does not always show up so well in the show pen, but what we are thinking about now is the breeding pen. Look out, then, for a very finely edged tail.

The next important point is the color of the bird. What is wanted is a beautiful bright bay all over, and the evener the better. Many cocks are what we call two colored—bright bay in some parts and clay colored elsewhere. Of course, you only get this perfect color on a very first-rate bird, so that you must look out for degrees of excellence, and bear in mind that in proportion to the price paid will be the excellence of the bird. Select a bird with a good neat comb, well set on, and with a long leader, as a good leader sets a bird off so. The face cherry red and the ears white, smooth and round. Old cocks "go" a bit in face generally, but this does not matter so much in a bred cock, so long as the other parts are all right. Legs should be blue, sometimes they come willow and greenish, even from the best birds; I don't know why.

With such a cock, or the nearest you can afford to get to this, you want to get some right hens or pullets. These pullets are called cock breeders. They are a rich golden red color, evenly penciled all over, something like the Silver Penciled cock breeding hens, only here the color is golden red instead of pure white. The head points require to be especially neat and the ears a pure white and nicely rounded. There is no way of telling a good cock breeder by the outside. You want, as in other varieties, to know the blood and breeding, or you will never do any good. These pullets cannot be bought for an old song because they are "only cock breeders." They are worth every bit as much from a breeder's point of view as a good show cock, because without these you are helpless. The best way is to try and get the sisters, or mothers, or aunts of one of the crack cocks of the year, and after a big show there is always a run on these birds. Do not grudge a good price, for the hen is half the battle.

Be very careful never to run out of your cock breeding pullets, as you never know what a cross of fresh blood will do. I always keep at least two pullets to go on with. The thing is, not so much to have a big pen as a good one. I generally put up a cock and two hens or pullets for my own use and find it far the best way, as then you know what the chickens are bred from.

Gold Pencils are excellent layers, and I am sorry to say, though it does not matter here, excellent flyers.—Rev. C. D. Farrar in Feathered World, Eng.

A Pair of White Wyandotte Winners, Owned and Bred by A. S. Carnahan, Banksville, Pa.

—An earnest plea for the preservation of Niagara from the encroachment of commercial and manufacturing interests so far as these may injure the beauty of the greatest natural wonder of America, is made in the Outlook's Magazine number for May by Miss Mary B. Hartt. The article is accompanied by illustrations which add to the point of the author's remarks about the injury already done to the beauty of the Falls. $3 a year of The Outlook Company, 287 Fourth Avenue, New York City.

1900 TESTIMONIALS 1900

Below will be found 1900 Testimonials that speak for themselves——but they are not all printed. We simply extract a few of the hundreds of kind notices received in the year 1900 from January to June.

SOLD ALL.

I have had good results from the "ad," having sold all of my surplus stock. A. R. DEMING.

MUST RAISE MORE STOCK.

The American Fancier alone. with my winnings, sells all my stock. Shall have to raise more before I look further for an advertising medium. W. J. WILSON, Suffield, Conn.

A PLEASURE.

The American Fancier of the 24th inst. is at hand. It is a pleasure to see a paper, which will give a full and complete write-up of a show and will give names not mentioned on their advertising list. W. W. WITHEE, La Crosse, Wis.

THE BEST REPORT.

The American Fancier has the best report of the Boston show I have seen. A. A. HOWLAND, Worcester, Mass.

WILL REAP ITS JUST REWARD.

I do not want to miss a number. Your show reports are worth ten times the cost of the general subscription, and by your furnishing the full show reports without regard to whether the exhibitors are advertisers in the American Fancier or not, it shows your honesty of purpose and the day is not far distant when the American Fancier, as a paper, will reap its just reward. The papers that fail to give the full awards of all shows are robbing their subscribers and I can see their finish. J. H. WOODHEAD, Leicester, Mass.

JUST THE PAPER.

Have received the Feb. 10 issue of the American Fancier and it is just the paper I have been looking for. JOHN W. WHITNEY, Santa Cruz, Cal. Feb. 28, 1900.

SOUND INFORMATION.

I did no get this week's copy. Please send it. I don't want to miss a copy. I admire your paper for show records and as a medium of sound information. It also pays to advertise in your paper. GASPER TARR, New Stanton, Pa. Feb. 13, 1900.

UP-TO-DATE.

The American Fancier is a good paper. The edicorial department is up-to-date. Get the news in the Fancier when it is news. CLYDE PATTERSON, Sedalia, Mo.

RECEIVE BEST RESULTS.

We have received best results from our "ad" in the American Fancier and do not care to lose an issue. Sold stock in Mexico, Bermuda and So. America, and all say, "saw 'ad' in American Fancier." TASHMUIT FARM, Waltham, Mass.

HAD GREAT LUCK.

I have had great luck in making sales this season. Am about sold out of surplus stock, and have advertised in nothing but the American Fancier. RALPH C. WEIR, Cambridge, N. Y.

THE BEST AND CHEAPEST.

I think the American Fancier is the best and cheapest for the money of any Poultry Paper published, as the show reports are worth many times the price of subscription, and the fairness you show in the liberal way you report the winners, whether they are subscribers or advertisers or not, ought to be appreciated by all connected with the fancy and render you assistance to keep up the good work. A. ESSIG, Cleveland, Ohio.

WORTH READING.

The report of New York Show is worth reading and the sight must have been good for sore eyes. WM. E. THOMAS & SON, Scottdale, Pa.

SUITS HIM BETTER.

The American Fancier suits my purposes better than any other of the eight or ten Poultry Papers I take. DR. HARWOOD, Chasm Falls, N. Y.

MUCH PLEASED.

I must say that I am very much pleased with the American Fancier, especially the show reports. JOHN RAMSAY, Owen Sound, Canada.

GETTING WEARY.

The American Fancier is, in my humble opinion, the coming Poultry Journal, because it publishes all the shows. I, for one, am getting weary of the policy that most other journals have adopted in publishing winnings of display advertisers, and I am confident it will be only a matter of time when hundreds of subscribers will drop these monopoly journals. DAN LINDBECK, Bishops Hill, Ill.

COOPS ALL SOLD.

Please discontinue present ad., as coops are sold. After but three insertions, found buyer in the West. This speaks highly for the American Fancier in this respect. Thanking you for past favors, I am, J. R. LOOMIS, Oneida, N. Y.

SALES SOMETHING REMARKABLE.

The sales the American Fancier has brought me are something remarkable; it brings the right kind of customers, too. WARREN STEVENS, Ridgefield, Conn.

THE PLACE TO SELL STOCK.

Sales from the card in the American Fancier since and including the $97 of which I wrote you on the 26th, ult., are just $172. The American Fancier is the place to sell stock. J. H. DOANE, Gouverneur, N. Y.

SWEAR BY IT.

My classified advertisement in the American Fancier has given me excellent results—better than those obtained from any other American poultry paper I have tried. There is no poultry paper that I see that comes within a mile of the American Fancier. All the London boys swear by it. GEO. W. MILLER, London, Ontario.

THE COMING PAPER.

The American Fancier is the coming poultry paper of America. The account it gives of the shows is grand. J. N. O'NEIL, Toronto, Canada.

DOING GOOD WORK.

Editor American Fancier: The American Fancier is doing good work for me. Lots of valuable inquiries traced to it. AUGUST D ARNOLD, Dillsburg, Pa.

SHOW REPORTS WORTH THE PRICE ALONE.

Editor American Fancier: I like the American Fancier very much. The show reports are worth the price of the whole paper. H. W. HIGGINS, Orange, Mass.

THE BEST PAPER ON THE CONTINENT OF AMERICA.

Editor American Fancier: Please find enclosed nine new subscribers for the American Fancier, the best weekly paper on the continent of America—so "Billy" McNeil says and so say I. W. BARBER, Toronto, Can.

SPECIAL

$1. Advertising and Subscription Coupon... 1901 * * * 1902.

PUBLISHERS AMERICAN FANCIER,

JOHNSTOWN, NEW YORK.

DEAR SIRS:—

Enclosed find $1.00 (One Dollar), for which send me THE AMERICAN FANCIER one year or 52 weeks, and insert my classified advertisement of six lines three times (copy enclosed).

Yours truly,_____

Date_____ 190

Exercise for Poultry.

The value of exercise for poultry is neither generally understood nor sufficiently appreciated. In order to thrive it is almost an absolute necessity for fowls to have a fair amount of exercise, and it is erroneous to suppose that they, any more than other creatures, can to any great extent be deprived of exercise and continue in a flourishing condition for any considerable time. To a very large degree such deprivation tends to prevent successful rearing of chickens from the eggs of fowls closely confined. I am aware that there are poultry keepers who do rear chickens year after year from fowls rather closely confined, but they are mostly enthusiastic in the management of their poultry and provide scratching exercise for them. The fowls which do best in confinement are those which are naturally active, such as the Minorca, Leghorn and Andalusian, while the large breeds, such as the Orpington, Plymouth Rock and Brahma, which are naturally more indolent, are almost certain to become too fat to permit of thrifty chickens being reared from their eggs, if they are not very judiciously fed and compelled to take exercise by scratching for a part of their food.

There are some fowls in every breed which are predisposed to become fat—that is, they inherit this undesirable attribute, and the best means of preventing it is to provide exercise and to feed rather sparingly on a diet, the solids of which contain less than 50 per cent of fat-forming matter. The importance of a suitable diet becomes evident to one when considering almost any subject connected with the management of poultry. One sees that exercise may be provided without any great advantage if attention is not also paid to the dieting, because overfed fowls are not very likely to exercise themselves in foraging for food.

It is necessary to induce chickens to take exercise from the time that they quit the shell. They should be allowed as much freedom as is consistent with their safety, so that they may exercise their legs and at the same time all the muscles of their bodies, in order to promote their development. It is fallacious to suppose that exercise only benefits the muscles under the control of the will. The action of the heart is increased and its development promoted, whereby a larger quantity of blood is sent to all parts of the body. From the blood tissue-forming matter is deposited in every part of the body, and, of course, an increased flow of blood results in greater formation of tissue, and instead of the blood becoming poorer it becomes richer, because the exercise causes an increased appetite for food. It also aids digestion.

As a rule there is not nearly so much exercise taken by chickens as there should be, because they are much too freely and frequently fed, and are consequently not stimulated by hunger to take exercise in foraging for food. Most poultry keepers labor under the impression that the frequent and liberal feeding of chickens tend to produce large fowls, but such is not so. It has the effect of creating fatness and plumpness, but not size. Exercise is necessary for that, because it expands the frame and induces hereditary enlargement, and in this way a large strain of fowls is likely to be produced.

It is very necessary for fowls that are intended for stock to have as much exercise as possible from chickenhood right on, and they should be at all times rather sparingly fed in order to induce them to take exercise. When on an open run it is advisable to scatter their grain far and wide, so that they will have to take as much exercise as possible when collecting it, and if not too freely fed they will rush here and there after it. Those kept in confinement should have their corn scattered amongst a quantity of litter in a covered run and be rather sparingly fed, which will induce almost continually scratching, and if some screenings from wheat are scattered amongst the litter it will give them almost constant employment. The litter may be refuse from a stable or corn mill, chaff or finely broken peat moss, and it need not be changed more frequently than once in six months.

As an experiment I kept an average of about fourteen fowls for more than five years in a pen, with a ground space of about 100 square feet, without the litter in the covered run having been changed during that time, and the fowls in it continued in a condition of health that was very satisfactory. As a matter of fact, not one died from any disease that could in the slightest degree be attributed to an insanitary condition of their environments. During the time two died through fatty degeneration. Sometimes they were much too liberally fed, and this is in a great measure unavoidable when one has to trust the feeding to servants. There was not any male bird kept regularly in the pen, but male birds sent to me for treatment were, through want of other accommodation, sometimes placed in it. Of course, those suffering from any contagious disease were not at any time allowed in the pen, and it is especially necessary to guard one's stock from contact with fowls suffering from roup of the diphtheritic type and that disease known amongst poultry keepers as white comb. It is advisable to keep the litter in the pens about a foot deep, so that the fowls may have much difficulty in finding some of the grain scattered amongst it. One great advantage in the litter being in the runs in winter is keeping the fowls on a warm bed. They usually take considerable exercise in dusting themselves in it.—W. Vale in Poultry, England.

Columbus, Ohio.

The fourth annual show of the Central Ohio Fanciers' Association will be held at Columbus, Ohio, December 26th to January 2d, 1902. The Columbus show is becoming known far and wide for its immense exhibit, and its liberality and fairness to exhibitors, and its large growth each year. Each successive exhibition sees this show a step in advance of its predecessor. It is acknowledged to be one of the best shows for exhibitors to make sales. At their recent show 736 birds changed hands. Exhibitors should take this into consideration when booking their winter shows and not forget that it will be the largest show ever held in Ohio. Following are the officers: President, J. C. Underwood; vice-president, H. P. Maughlin; secretary, F. A. Brigel; treasurer, E. R. Dunn.

Trenton, N. J.

At the last regular meeting of the New Jersey Poultry, Pigeon and Pet Stock Association, the following officers were elected for the ensuing year: Charles Durling, Hopewell, N. J., president; Robert Oliphant, Trenton, vice-president; Walter S. Gladney, Jr., Trenton, secretary; G. W. Pearson, Jr., assistant secretary; E. T. McGalliard, White Horse, treasurer; George B. Randolph, Weston, superintendent; W. S. Baldwin, Trenton, assistant superintendent. The Board of Directors is as follows: Charles Durling, Robert Oliphant, W. S. Gladney, Jr., E. T. McGalliard, J. D. Nevius, Beverly, N. J., A. A. Parker, Dunellen, Harry Ungerer, Westfield, F. R. Moeller, Newark, and George Hildebrecht, Trenton. It was decided to hold the annual show at Trenton, December 10th to 14th. Liberal cash specials in gold and silver will be offered and the best judges procurable will be engaged. The Association expects to make this the largest and best show ever held in New Jersey, and will offer more cash specials than the Association in the East outside of Boston, New York and Philadelphia. Entries will close November 25th.

WALTER S. GLADNEY, JR., Sec'y.

MUCH PLEASED.

Editor American Fancier: I have been very much pleased with your valuable paper. It is up to-date in every respect and everyone speaks well of it in this vicinity. The American Fancier should be read by every true American fancier.

GUST. GESSNER.

Linfield, Pa.

BUSY AS BEAVERS are the Silver Wyandottes

ON BEAVER HILL FARM
BEAVER, PA.

T.E. ORR, Prop'r
W.D.Poole, Sup't

They have been doing business at the leading shows: four prizes at Indianapolis, three at Hagerstown, four at Philadelphia, four at New York, three at Chicago and nine at Pittsburgh. First hen at New York and First Cock at Chicago shows that Beaver Hill Farm is able to go in good company.

OUR BREEDING PENS FOR 1901 CONTAIN SIX FAMOUS PRIZE-WINNING COCKS,

Five not less famous prize-winning Cockerels, and more high-scoring and prize-winning females than those of any other breeder of Silvers in America.

BEST OF ALL, OUR BIRDS ARE BRED TO LAY EGGS

Twenty years line bred since they left the hands of the originator of Wyandottes, L. Whittaker. *Yearly records of over 200 eggs per hen.*

A handsome booklet, giving records, particulars and prices sent free to all who name this paper.

Eggs and a Few Birds for Sale.

Lamb Cutlets.

The next poultry show of importance will be the Pan-American, and if one-eighth of the breeders exhibit there that have declared that they should, there will be one of the greatest poultry exhibits ever shown.

Among those who will be at the Pan is L. O. Bromley, of Silver Creek, N. Y., whose young Single Comb Brown Leghorns are crowing P-a-n–A-m-e-r-i-c-a-n already. He sent us some striped feathers that have a great resemblance to the description given in the little book, stating that they are from the 3d pen Boston birds. We predict that when "Lew" gets lined up at Buffalo there will be a hole made in the bunch of premiums that he will carry away. He has a change of "ad" in this number in which he declares no breeder of Leghorns can show a better record considering the number of entries.

A letter from Ira T. Mattison, of Upper Sandusky, Ohio, informs us that he is having great sales, in fact one of the best seasons he has ever had. We also got the same information from E. S. Grable, of Canton, Ohio, he having disposed of nearly all of his surplus stock and is selling a large number of eggs.

Dr. C. C. McLean, of Meadville, Pa., the Buff Cochin man, made us a call one day this week. The Doctor says he has discovered another wonder in his flock in the way of a cockerel. We say "another wonder" from the fact that the Doctor had a large number of birds that were, or are, as good or better than anything we saw at the shows during the winter, and we saw quite a number of them. The Doctor's showroom record is something to be proud of. At one time he had birds in three shows and got nearly all there was to be had at all of them, and at the same time a good share of his best birds were being fitted for another show. His birds will be found at the Pan; look in the Buff Cochin alley.

I have received a copy of the Empire Cooping Company's illustrated and descriptive catalogue, printed by the American Fancier, which, of course, makes the appearance of the book good. The new cuts are grand and show the coop to the best advantage. The coop itself is certainly the neatest, cleanest and handiest, if not quite the cheapest in price, of any coop that has ever come under my notice. Like the coop, the Wemples are all right; they give you a square deal and prompt attention.

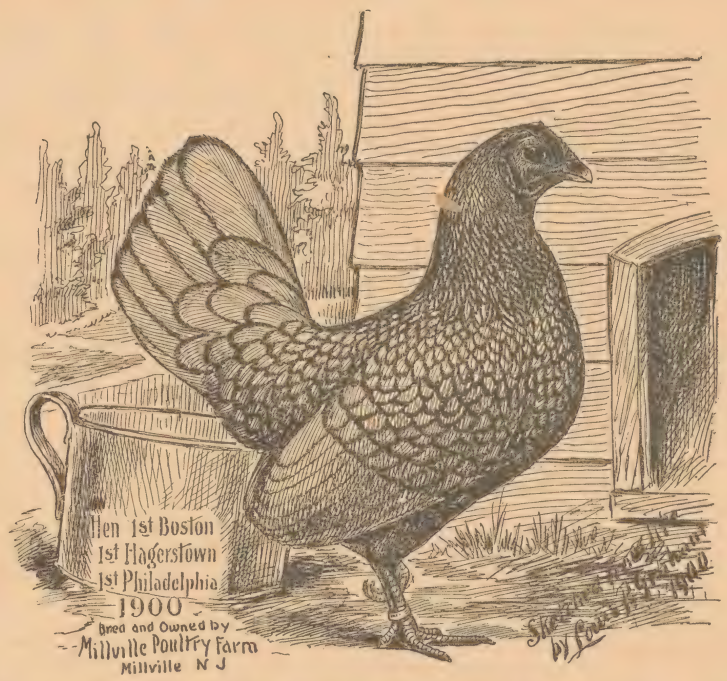
PIGEONS.

Lofty Thoughts of the Editor

As there has been a lot of trouble on the band or ring question, perhaps a few words may be the means of explaining some of the trials and tribulations of our band maker, Mr. T. Willetts. To begin with, he makes an awful lot of rings, and it means, consequently, a lot of work. When not handicapped by special marks and special colors, he has in the spring of the year, he tells me, all he can do to fill orders, mostly for two reasons, the first of which is, people do not order, as a rule, until they are in a great rush for them, and when a large number are all in the same boat someone has to let his young go without rings and Mr. Willetts gets in hot water. The second reason is, a great many send for rings without sending the money. Now, experience, he tells me, has taught him that when he sends out rings promiscuously without the cash it often happens he never gets a part of it, hence the rule that cash must accompany the order, and as he is not a rich man he cannot pay for stock and workmanship and get anything out of it for himself unless things are arranged in such a manner that he is insured against a loss by having a lot left over. The Turbit Club orders the rings through the secretary and takes, say, 500 or more and pays for and distributes them, taking the color he may give them, without any special instructions, other than they prefer a different color to other rings of that year and A. T. C. on each ring—a clean business transaction, in which Mr. W. takes no risk and consequently knows just how much he has made. Another example he gives us is the Jacobin Club. They did not order the bands until February and then a color he had made no provision to provide, and with such special marks upon them that he had to make new dies, and in the rush of orders could not give them the attention he should have done had he had time to attend to them. An additional grievance is, he has to send them here, there, and everywhere, not knowing whether they will require one thousand or two thousand, and looking at it from Mr. Willetts' standpoint, a dangerous proposition to make up a lot and also equally dangerous not to have enough. I suggested a pigeon conference, such as they have and work successfully in England, he to work with such a body and arrange matters so that each breed could be assigned certain sizes and colors. He agreed with me that such an arrangement would expedite the distribution of rings if they could meet, say, some time in December previous to the year they were to be issued, agreeing upon such as would be used the following season. This would necessitate the formation of an association of pigeon clubs, and they would then be in a position to not only attend to the ring question, and each club through its representative at the meetings have the ring it desired, and attend, as they became better organized, to such matters as might rightfully

come before a representative body of fanciers. With such clubs as the Turbit, both Tumbler, Dragoon, Carrier, Barb, Fantail, Jacobin, Pouter and Pigmy Pouter, Magpie, Oriental Frill, Owl, Parlor Tumbler, and Swallow, and one or two others not just now in my mind, with representatives of the Homing fanciers who show, a strong and a fully representative organization could be formed and get at matters in such a manner that there would be no getting away from, and as the spirit of the times seems to be concentration in business enterprises, why is not such methods desirable in the pigeon fancy? There are none but what will say, "We need it," but all immediately say, "But you can't do it." We never will by waiting until the winter shows and then all agreeing we can't do anything this year, it being too late in January. Now is the time to get at it during the so-called dull season, and if the writers for the pigeon fancy will take hold it can be organized so that a meeting could be held and business done for the first time at the great Pan-American show in October. With Messrs. Gavin, Twombly and Joos all working in harmony, it could be brought about very nicely, and if such can be brought about it will be a stride well worth all the trouble and printers' ink caused off than they were before. As an instance of this, I may mention the experience of three prominent breeders. These gentlemen some years since determined to give the experiment a trial by using self-black birds to cross with their established strains. Several of the young of the first generation showed a marked improvement in tail color, a fact which, unfortunately, induced their owners to continue on the same lines by carrying the experiment a step further. I say unfortunately because, when these birds came to be used in the stud, it was found that their progeny were not only far more blue in tail than were their grandparents, but that they likewise exhibited a more serious blemish in the shape of a black or sooty appearance about the head and neck, in consequence of which it was thought advisable to destroy them all as the best means of saving the respective strains from further deterioration. Not only in this form is the penalty paid, for experience will prove that a discoloration of the under bronzing will frequently be an accompaniment of the black tail. In such cases we shall find the feathers of the lower breast, thighs and vent are dark and cloudy, and it even happens in some instances that the elongated feathers under the tail are indistinguishable from it in color. demand that the tail color be "of a deep, ebony black," and with this end in view will continue his efforts to approach as near thereto as may be consistent with general all round excellence.



It may be interesting to note here that the appearance of what, in itself, would be considered a light tail may be considerably altered by the color of the lower rump and tail coverts. If these parts be dark or black, the blue of the tail proper, be it never so clear, will be greatly modified and may even appear fairly subdued; but if, on the other hand, blue or grey is the predominating tint in the region referred to the effect will be to accentuate the faulty color of the tail and to impart a common appearance to the plumage generally.

As to the wings and flights, these should be of the densest possible black, free from any suspicion of slatiness or chequering at any point and even in color throughout. Unfortunately a very large percentage of birds as at present exhibited, mostly, too, pigeons of exceptional lustre, are very unsound in the wings, displaying a strong admixture of bronze, which usually asserts itself in the region of the "bars," but frequently extends to the wing coverts. As might be expected, specimens of this description will and breast. It also spoils the look of the flight feathers, which in such birds are usually very brown, similar, in fact, to the color we should expect to find in a nestling. I am strongly of opinion that such Archangels should be discouraged in the show pen, chiefly because of their defective ground coloring, also on account of the faulty character of their lustre, which is, as a general rule, not in conformity with requirements. But as to their value in the stud, that is, of course, a different matter and one that needs to be carefully considered. Seeing, however, that the faults of plumage arise chiefly from a preponderance of bronze in the bird's composition, and having in view the fact that such "sports" as self-colored "bronzes" are by no means rare and will occur at times even in the best strains, the breeder will not require to be warned against the danger he may incur in mating together two pigeons of this description.

Mention of the flight feathers brings us to the consideration of their merits with respect to color, and in dealing, firstly, with the primaries we notice that these, like the feathers of the neck, are parti-colored, but with this difference, that while in the latter the bronze alone is visible and the black hidden, in the former it is the black that is

Owned and Bred by Millville Poultry Farm, Millville, New Jersey.

and used. I would suggest that our friend Joos use his influence to bring such clubs as have a preponderance of members in the West into line, and I know Mr. Twombly will be glad to do the same here in the East.

The Archangel.

[Continued from April 27th Issue.]

The aim of breeders has for many years been to keep the tail as dark as possible, and rightly so, if we are to be guided by the standard. That they have been successful in attaining this object is evidenced by the fact that so many birds are met with at the present time with tails absolutely black; but one cannot too strongly warn the novice against being beguiled into believing that such Archangels are necessarily high class specimens. The fact is, that the point is not particularly difficult to get, if the breeder is prepared to sacrifice more important properties. I have seen scores of black tailed Archangels not worth their keep from the point of actual merit. All sorts of expedients have been tried to obtain the coveted dark tail, but most of these have ended disastrously to those concerned. Some fanciers have resorted to the cross with the Black Archangel, with results that, so far from effecting any improvement, have left them worse But the weightiest reason for taking exception to the great importance attached by many to the black tail is that in the vast majority of cases it entails a loss of lustre, a property which, it is needless to add, is of far more value in an Archangel. I think all practical breeders are agreed as to the truth of this; many, indeed, have been at great pains to put the experiment into practice by persistently breeding for the dark tail, regardless of other points, and have found that while, as already stated, they were able eventually to achieve their object without very much difficulty, it was only at the cost of the more important property. It therefore seems as though this craze after the black tail, so rife among a certain section of the Fancy, is, after all, more or less of a delusion, and personally I am inclined to regard it as such. Not that a light or blue tail is the one to be encouraged; far from it, for by so doing we are but putting a premium on what must certainly be regarded as a defect, even if only a minor one. Many judges are too apt to sum up the quality of an Archangel merely by the color of its tail, as though that point were of paramount importance, and I would therefore urge most strongly the necessity of giving due consideration to other properties before allotting the true value to such merit as may lie in the tail. Meantime the breeder will, of course, keep in view the requirements of the standard which generally be found to possess unusually good bronzing, especially underneath, and indeed it would appear that in most Archangels one or other of the body colors will predominate to the detriment of its associate. Thus in the case in point we shall find that with these bronzy winged birds the black of the remaining portions of the body will be more or less affected and a general "rustiness" will not infrequently pervade the whole of it, sometimes with the addition of a band of bronze across the upper part of the back, and a similar discoloration on the tail coverts and feathers of the rump, not to mention the under portion of the tail proper, which in such cases assumes a reddish hue.

The fault here described should not be confounded with the somewhat similar effect produced by imperfect lustre, of which I shall speak later. It is purely a matter of ground color, and as such can only be regarded as mismarking and should be treated accordingly.

To obtain a correct idea of what is meant, it will only be necessary to spread open the wing of a bird of this type, holding it at the same time to a strong light. A distinct "rustiness" will be at once detected running through the feathering, producing an effect that detracts greatly from its appearance, because it weakens the deep rich black of the wing that affords so striking a contrast to the bronzing of the neck I seen and the bronze obscured. This, should explain, applies to the wing when closed; only when it is spread should the bronze or, more properly, chestnut hue be visible, and that only on the inner webbing of the feathers, the outer being required to be as dark as possible, preferably black. This bronzing on the hidden portions of the dark part of the plumage is a very curious feature in the Archangel, and will appear more so when we notice that it is usually found in the greatest perfection in birds whose wings are of the densest black. When seen at its best its shade is quite unique, not in the least resembling the bronze of the body, but rather suggesting, as noted above, a deep rich chestnut. It lies thickest at the base of the feather and gradually lessens in width as the tip is approached, so that at the extreme end none is or rather ought to be visible; but this is not invariably the case, as some strains, notably those confined to a certain locality, display the markings to a degree so excessive that the bronzing is perceptible even when the wing is closed, which I venture to think is far from a desirable feature. Although some judges attach importance to the point, it is, I believe, an open question

SENSATIONAL TURN.—Blobbs: He told me a hair-raising story. Slobbs: About what? Blobbs: The profits in Belgian rabbits.—Philadelphia Record.

whether the possession of a good flight bronze is indicative of high quality in its possessor. Be this as it may, it is certain that very many superb specimens are sadly deficient in this respect, and I know of one strain in particular that has probably produced more prize winners in the last few years than any other, whose representatives were quite innocent of any bronzing in the flights. In any case the point is a minor one and its value should be estimated accordingly.

Much variety of color exists in the flight markings, even in individuals of the same strain. In some the bronzing will be rich and bright, while others will have it pale or ashy, the latter shade usually, but not always, going with a weak body bronze. A third category embraces birds whose primaries are entirely blue or grey, without disclosing the chestnut tint at all. Such flights are of common appearance and certainly ought to be discouraged, especially in the show pen, albeit, as has already been observed, many otherwise good pigeons possessing the fault are exhibited. Occasionally, too, one will come across specimens in which the flight bronze, instead of extending the length of each primary from stem to tip, will be apparent only at a certain point of the feather, merely occurring as a spot, but so placed as to form a transverse line across the flights when the wing is spread. I have had this occur very frequently, but am not able to account for the peculiarity, interesting as it is.

With respect to the secondaries, though it is desirable that these should be as dark as possible, yet a certain degree of latitude would seem allowable in the matter of color. It is true that in very many examples we shall find a solid black the pervading hue. and there can be very little doubt that preference should be given to this feathering when it exists in a bird of high quality. But as we have already seen, color alone does not constitute a good Archangel, and for this reason it is well not to place too much stress on a point such as we are now discussing, at best a comparatively obscure one. The secondary flights are almost invariably tipped with black, whatever their prevailing color may be, and as the greater part of the feathers composing them are hidden from view even when the wing is outstretched, the general appearance of the latter is not materially affected by a slight weakness in their color. I have known a challenge cup winner distinctly blue in his secondaries, although excelling in depth of color in his primary flightings, and can call to mind many another "topper" in which the first-mentioned feathers left much to be desired in the matter of soundness —many such showing the bronze here. The great objection to slatiness in the secondaries is that the color, as a rule, is not confined to these feathers, but appears also in the tail of a bird thus marked, and that part will suffer more in comparison. Taking all things in consideration, a wise breeder will do well to keep the secondaries as dark as possible, or, at any rate, to hold in check the tendency to a striking blue, both here and in other parts of the plumage.—A. A. Goodall in Feathered World, Eng. [To be continued.]

PET STOCK.

Pedigreed Belgian Hares.

There is undoubtedly a considerable amount of humbug practised upon the American public in the sale of pedigreed Belgian Hares. People seem to be willing to pay for pedigrees and seem to think that in some mysterious way a list of ancestors, a mere string of names, wonderfully increases the value of an animal. And so long as this state of affairs exists enterprising breeders will furnish the buyer what he wants—a pedigree, if that is what he desires. If the breeder is unscrupulous the pedigree will increase in length to the delight of the purchaser and the profit of the seller. Honest pedigrees there are, perhaps nearly all of them are honest, but, except to the man who knows how to make a proper study of them, they are valueless in breeding and of value only in selling.

I believe in pedigrees. I keep them myself. I study them and try to make them of service in breeding operations. But I think that I realize that what I wish in my hares is not a pedigree, but the combination of the best qualities. I have unpedigreed does that are to me none the less valuable because I do not know the names of their ancestors. I happen to know that they are descended from stock imported from England by a wealthy man, who disposed of this stock at auction when breaking up his establishment and removing to a new and distant residence. I happen to know that they were selected by one who knew the requisite qualities of a good hare and was willing to pay a good price for them. Such knowledge is just as reassuring to me of their value as is the knowledge of the names of the ancestors in my pedigreed animals. In other words, and this is the fact I am desirous of impressing. the value of a pedigree does not consist in the knowledge of names of ancestors, but in the knowledge of qualities, for which the names are but convenient symbols to enable the qualities to be recalled. A pedigree, therefore, to be of value should consist of something more than names; it should contain, in connection with the names, some account of the characteristics of the ancestors. I do not mean by this that the seller of a pedigreed animal is bound to set forth these qualities and characteristics, but that the buyer, if he wishes to make the pedigree of practical value to himself, must obtain this knowledge in some way.

As this is a practical matter, let me illustrate it by a specific example My Belgian buck, Lord Rubifoam, has in his pedigree as recorded 55 names. That signifies of itself nothing, except industry and patience in keeping the record. But when it further appears that his sire and dam are both first prize animals and that his ancestors have won not less than 15 first, 4 second and 1 third prizes, and that these prizes have been won at the largest shows, in the strongest competition and under the most competent judges, there comes a greater assurance in the quality of his blood and the chance of his transmitting like qualities. To make this assurance complete, one should further know the characteristics of the various ancestors. To some extent this is also known by me, so that I am in a fairly good position to know how to breed him.

Let me take one more illustration, my Flemish Giant buck, King William. His sire, Brompton Star, was one of the best imported bucks bred from Brompton King and Lady Gray. His dam, Lady London, also imported, was sired by the famous Duke of York, who was the Crystal Palace challenge cup winner and the heaviest and best buck in England. He was the sire of the Duke of York, Jr., who has weighed 19½ lbs., and his owner fully expects him to reach 20 lbs. in weight. Lady of York, weighing 18 lbs., was sired by Brompton Star, who was the winner of eight prizes. Here, then, in this pedigree we find quality and the power to transmit quality. We know not only the names and characteristics of some of the ancestors, but also how successful they have been in transmitting the desired qualities. Such facts as these are, to my mind, of vastly greater importance, in the practical use of pedigrees, than the longest list of mere names.

A pedigree to be of the highest possible value should contain:

1st. A correct list of the ancestors.

2d. A correct account of all winnings, when and where made, under what judges, and in what competition.

3d. A description of the size, color, shape and other characteristics of every ancestor named.

If one could have such pedigrees it would help him amazingly in his breeding operations. He would be able to know what the inheritance of the breeding animal was, what characteristics had been most frequently transmitted, and what, therefore, would be the likelihood of a character or series of characters appearing in the progeny. He would also know what two animals to pair in order to produce the best results, how to avoid defects, and how to intensify desirable characteristics. He would further be able to decide whether inbreeding would be likely to improve or impair the stock, and when, where, and how to avoid the injurious effects of improper inbreeding. In fact, such pedigrees would render breeding much more exact than it is and enable the breeder to predict with a high degree of probability the results of each mating. Certainty can never be expected in breeding operations, but a high degree of probability is among the possibilities when pedigrees connote qualities as well as names. Therefore. in spite of the humbug which attaches to many pedigrees, I am forced to believe that, properly practiced, pedigree breeding is the best and indeed the only form of breeding which will give the requisite knowledge for the most perfect pairing of Belgian Hares and other animals.

If it is objected that good results are secured by poultry breeders, the most of whom do not practice pedigree breeding, my reply is, first, that with fowls, except by adopting measures not regarded as feasible, pedigree breeding, strictly so called, is not possible; and secondly, that those poultry breeders who most nearly approach pedigree breeding, and who, if they do not record, carry the pedigrees of their stock in their mind, are the ones who, as a rule, make the greatest success. Such breeding as the best poultry breeders follow is an imperfect and incomplete form of pedigree breeding, and it does not follow that their results would not be more satisfactory if their form of pedigree breeding were more complete and more perfect. Indeed, the argument to be drawn from the methods of successful poultry breeders is in favor of and not against pedigree breeding.

50 Cents For Belgian Hares.

Our Californian contemporary, the Riverside Press, jeers at the Eastern enthusiasts who see in the Belgian hare a rainbow with a pot of gold. "The fact is," says the jeerer, "that the man who can get 50 cents for any kind of a Belgian hare in Southern California is playing in great luck." California is a spoiled child with so many toys that she doesn't appreciate them. The folks in Maine and Massachusetts look forward to the time when the world will be fed and clothed by Belgian rabbits.—New York Sun.

RHODE ISLAND REDS—The general utility fowl of the twentieth century. Our winnings the present year demonstrate without a doubt that we have more prize winners than any breeder in the country. Having won in 1900 nine firsts and sweepstakes for best male, Concord State Fair, Concord, N. H.; eight firsts and one second, nine entries at Brocton show; two firsts and special for best R. I. Red male bird in Fall River. Six first prizes. six entries, Malden, Mass. Forty-two prizes at Philadelphia, including the special offer of $50 in gold and $25 in gold, also including nine firsts and nine seconds out of a possible ten each. 1901—Boston show in the hot test competition, forty-eight prizes, including four firsts, three seconds and eighteen specials; at New York, seven firsts and five seconds which is a result unequalled by any breeder of any variety of any fowl. If you desire to obtain stock from the very best that there is, state what you want and write us for quotations. HOUSE ROCK POULTRY FARM, P. O. Box 6, Wollaston, Mass. Yards and Farm, East Weymouth, Mass. 73-00

INDIAN Runner eggs, Cook's champions, Br. and White, $1 per doz. from May 1st. We introduced this breed in the U. S. in '94, and have since had from Bulevan Bros, John Barwick and Simon Hunter twice, MRS. FARRER, Box No. 16, Orange, Va. 99-01

GRAY Call Ducks of high quality, guaranteed satisfactory at $3 to $5 pr. Fresh eggs for hatching, $1 per 13; $2 50 for 39. I have bred them 9 years, always aiming at perfection and now, no breeder in U. S. can show better birds. C. T. MORSE, Hartwick Seminary, N. Y. 99-01

CUSHMAN'S GEESE are of the highest class. There is no question about their business or show qualities. They are not the small cheap kind. They not only win highest honors at principal eastern fall fairs and Poultry Shows, but the same geese have been bred to lay, and produce goslings that grow to 8 and 12 lbs. in as many weeks. You not only take pride in their great size and good looks, but derive greater satisfaction from the income received from their products. No eggs from finest Africans and Embdens for sale this season at any price. Eggs from finest Toulouse that have won at Boston, Philadelphia, New York, and many times at Brocton and R. I. state fairs, at $4 for hen setting of five. Eggs from finest White Chinas, winners at above shows at $2.50 for five. From good market producers, African characteristics and large size, but not quite pure, at $2 per 10 eggs. Packed to go to Alabama or Oregon. All perfectly clear eggs tested out the 6th day and returned prepaid will be replaced free. Orders booked for young goslings, any variety, to be delivered in fall, if received with 25 per cent of price before July. Call and see our superb stock. SAMUEL CUSHMAN & Co, DeWolf Farm, Pappoosesquaw, Bristol, R. I. 97-00

How Best To Set A Hen.

HENS WILL SIT
and do their level best when given the right kind of a nest, the right number of eggs, the right kind of food, the right kind of care and dusted with the right kind of insect powder. For this latter purpose Lambert's Death to Lice fills all of the requirements.

EGGS WILL HATCH
when the breeders are kept free from lice, and when they have daily out door or scratching shed exercise. Under these conditions eggs from healthy birds are usually well fertilized. When good eggs fail to hatch the trouble is often outside of the eggs. Lambert's Death to Lice Powder never injures the fertility of eggs for hatching, the sitter or the little chickens should they hatch in a handful of it.

CHICKS WILL GROW
when started free from vermin and kept so from the shell up. If allowed to become lousy they lose strength and vitality, which will stunt them in growth or cause an early demise. More chickens die every year from this cause than any other, while a little Death to Lice Ointment would save their lives. 73-24

DEATH TO LICE REMEDIES:
Death to Lice Powder for dusting layers and sitters—5 oz. sample, 10c postpaid; 48 oz , 50; 100 oz., $1.00, from here or nearest agency to you by express. Death to Lice Ointment for head lice on children or chickens also scaly shanks on fowls, 10c and 25c postpaid. Death to Lice Special, for making a liquid louse or mite killer and for mixing with the regular powder for fleas on dogs, moths, etc., 4 oz., 10c; 16 oz., 40c by mail postpaid. Death to Lice Liquid for spraying poultry houses, painting roosts, etc., (already prepared) 1 qt., 35c; 2 qts., 60c; 4 qts., $1.00, f. o. b. here. Book and "How Best to Set a Hen" sent free. **D. J. LAMBERT, Box 248, Apponaug, R. I.**

First Prize Pen at New York.

"RINGLETS" SOAR STILL HIGHER.

AT THE IMPERIAL SHOW OF THE NATION—MADISON SQUARE GARDEN, N, Y., THE WORLD'S RECORD OF

E. B. THOMPSON'S BARRED PLYMOUTH ROCKS

4 YEARS IN SUCCESSION was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ever accomplished in the annals of the New York Show; Winning during **4 years in succession MORE THAN THREE TIMES AS MANY 1ST PRIZES** as any other exhibitor, and as many **1ST PRIZES** as **ALL COMPETITORS COMBINED,** besides more **than twice as many Cups** and **Specials** as all, including the **superb challenge Trophy,** value **$100,** for best cock, cockerel, hen, pullet and exhibition pen; **$100 Sterling Silver Cup** for finest exhibit, **Grand Special Prize Sweepstakes Cup** value **$100** presented by the **President** for best P. Rock cock, cockerel, hen and pullet, any variety. My clean sweep of

FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES

on pullets has never been approached in Madison Square Garden, and stands alone and unequaled.

The world's record of 1st on exhibition pen at New York 3 years in succession is the undisputed Champion. With their 1900 record the **"RINGLETS"** have won at New York a grand total of **77 PRIZES. 31** of these prizes are 1st and specials, being 17 more 1st and special prizes than won by any competitor in the history of the show. Rare bargains in yearling breeders in lots of a trio or 100. Show bird fit to win in the fastest company. Richly illustrated 24-page catalogue on application. Elegant breeders in any number. Eggs from finest exhibition matings, 1 sitting, $5; 2 sittings, $9; 3 sittings, $12; 4 sittings, $15. ADDRESS 91-tf

E. B. THOMPSON, Amenia, Dutchess County, New York.

MUFFED TUMBLERS FOR SALE.

WINNERS IN ENGLAND AND AMERICA.

The grandest collection of winning Muffed Tumblers ever gotten together is now on sale, and can be seen by appointment and birds selected. I will sell any Muffed Tumbler I own and arrangements can be made to take the entire lot. The varieties are Blue Saddles, Black Badges, Black Mottles (Yellow Rose cock, 1st Boston and Chicago, price $15. one of the best living) and several other odd birds, all winners or will produce winners. My Tumblers possess characteristics peculiarly their own, having been bred carefully for years, and are streets ahead of any other strain. In the past five years I have bred more winners than all others combined. Stock birds sold to others have bred their best birds; why, then, waste time and money by breeding from ordinary stock, when for an ordinary outlay the best birds living can be obtained? Those who would like to win and breed winners are invited to correspond. Prices very low, but nothing in muff legs under $5 per bird. (Some as low as $2.50 in surplus Clean Legs.) Testimonials from dozens who have purchased winners in all parts of the country. Satisfaction guaranteed. State wants fully. See winnings at Birmingham, Eng. (1st and medal), Boston, Chicago and New York. While winning here I had a team of six winning at Birmingham, Eng., the greatest Tumbler show in the world, irresistible argument as to the quality of my stock. 48tf

FISHERS ISLAND FARM

First Prize New York Cock, 1898,
"MUNNATAWKET, JR."

Barred Plymouth Rocks have won in the blue, in the hottest kind of competition at Hagerstown, Washington, Toronto, Boston and New York, and our pens are better this season than ever before.

In White Plymouth Rocks our record at New York, where in '99 we won every first prize in the open classes and again in 1900 were awarded three times as many firsts as any other exhibitor, places us above competition. Our pens are rich in the blood of our greatest prize winners.

Our Cornish Indian Games have won at New York for five consecutive years.

Our Bronze Turkey Record of every first at New York for 2 years has never been equalled.....

PEKIN DUCKS AS GOOD AS GROW.

Stock and Eggs (except turkeys) at fair prices.

Champions at Pittsburg, 1901....

BUCKEYE CHIEF.

In a class of 162 we won 1st and 4th on cocks; 2nd cockerel, (losing 1st on condition, easily best male in class); 2nd and 3rd hens; 3rd and 4th pullets; 2nd breeding pen and our 1st cock and 2d cockerel were the talk of the show.

AT CANTON we have been holding the reins for years. 1898, Bridge, judge, 1st cock; 1st cockerel; 1st and 2d hen; 1st and 2d pullet. At Canton, Jarvis judge, 1st cock; 1st hen; 1st and 2d pullet; 3d cockerel; 1st pen. Canton, 1900, Lambert judge, 1st ck; 1st cockerel by error of 3½ points in weight; 3d pul; 4th and best of all, 1st breeding pen. Canton, 1 01, Myers judge, 1st cock, 92½ 3rd cock, 92; 1st cockerel, 94; 3rd cockerel, 92¾ and A CLEAN SWEEP OF 1st, 2d and 3rd PULLETS, 94¼, 93⅛, 93¼; 3rd hen, 92⅛; 1st breeding pen 187.

Besides this I have sold the winners for many shows this season.

EGGS I sold last year produced winners! Why not book you for a few settings and for once in your life have Barred Rocks of standard shape and color? Don't hesitate, but send stamp to-day for my illustrated catalogue explaining all.

THE OTSELIC EGG BOXES.....

I make the neatest, cheapest and best Egg Box on the market to-day, for shipping eggs for hatching. Over 10,000 settings were shipped in my boxes last year, and not one bad report. If packed according to directions which go with each box, there is no possible chance for eggs to get jarred or broken. My boxes are made of dressed pine with slide cover fastened with screws, handle on cover and pasteboard fillers on inside, made large enough to allow plenty of packing around each egg.

MY PRICES FOR 1901 ARE:

	PER DOZ.	PER 100.
15 Egg Size.....	$1 25	$ 9 00
30 " "	1 60	11 50
45 " "	1 95	14 00

"Profitable Poultry Keeping in All its Branches."

This is the title of the new and elegant Catalogue issued by the Cyphers Incubator Co., for 1901. It contains 224 pages, 8x11 inches in size, over 200 fine new half-tone illustrations and a wealth of interesting, down-to-date matter, covering the subject of **Poultry for Profit** in all its branches.

This is a Brand New Book,

not a re-hash of old ones. Contains special articles written by experts, and illustrates and describes over fifty of America's largest and most successful Duck, Broiler, Roaster and Egg Farms. It also contains the endorsements of over one hundred of the foremost breeders of this country—men and women who are using the **Cyphers Incubators**—and shows photographic views of many of their poultry plants and favorite poultry houses. Ask for Book No. 9 enclosing 10c in stamps, and address nearest office.

The American Fancier

(J. H. Drevenstedt & Edward Bartlett.)

TYPOGRAPHICAL UNION LABEL FULTON COUNTY No. 768

SATURDAY MAY 11 1901

From the Editor's Perch.

The illustrations on another page give a very good idea of the first prize Buff Wyandotte cockerel and pullet at Boston last January. These cuts came too late for insertion in the issue containing description of Messrs. Dutcher & Mattison's Yards.

***

Mr. F. A. Keller, Pigeon, Pa., reports nearly one hundred Partridge Wyandotte chicks out, many of them being sired by 1st Pittsburgh and Cleveland cock and others by the only son of the latter, a bird Mr. Keller refused $75 for. Mr. T. E. Orr purchased the cock bird after the Pittsburgh show, so we may look for some grand birds in that neck of the woods, next fall and winter.

***

An anti-score card club organized in the west is a novelty. Evidently Mr. T. J. Kimmey, the secretary and the rest of the members, have come to the conclusion that the score card is not the thing it is cracked up to be. We shall await the results accomplished by the above club with considerable interest.

***

George H. Pollard at the Rhode Island Experiment Station remarked:

"The yellow skin bird will sell the best in any market and will bring a premium over the white skin birds. We want also yellow legs if possible. If a bird is not good alive it will not be good dead. After the yellow skin look for fine feathers, the brighter the leg the brighter the skin. If you have a deep yellow bill you will have a yellow skin. Green food and lots of corn in some form will make yellow skin birds."

This is no doubt correct as far as the general market is concerned, but the fancy markets in New York will pay more for white skinned fowls. In fact for a number of years a certain dealer has paid extra prices for Langshan carcasses. The highest prices however are reached with Pit Game carcasses. The high quality and scarcity of the latter are responsible for the price.

***

Fancy or private markets are however not always at the command of the average shipper and the latter will do best to stick to the general demand until he can establish a special trade.

***

Mr. Gibson T. Williams, proprietor of Norwood Farm, Buffalo, N. Y., will leave for Europe this week for an indefinite stay. On his return to the United States he expects to resume breeding and exhibiting his famous Light Brahmas, Mr. Purdue in the meantime looking after the flocks

***

Mr. James Windsor of this city received a second consignment of Indian Game eggs from the famous yards of James Frayne, England. The first importation consisting of two settings yielded only three chicks but "Jimmy" thinks the second lot ought to shell out better and he hopes to get a few winners for the winter shows.

***

The catalogue of the Millville Poultry Farm Company, Millville, N. J., is a fine indication of the ability of the president and manager Mr. M. F. Delano. The latter has been remarkably successful in producing winners at the big shows and is a thorough fancier in the strictest sense of the word.

***

Mr. James H. Kelsey sends us the following:

"On April 21st there died at Middletown, Conn., after a lingering and distressing illness, Arlington A. Bailey, long and favorably known to the poultry fraternity as a breeder and exhibitor of high-class White Plymouth Rocks, which variety he, through long years, bred exclusively; and his success in the show room illustrated how thoroughly he had comprehended the perfect points of this beautiful variety. It was a matter of great disappointment to him that he was unable to attend the last New York show and again meet his many friends. We who knew him well, know how thoroughly he was devoted to a high ideal, not only in his favorite variety, but in every transaction. In all walks of life he was not only honest but an honorable gentleman, loved and respected by all who knew him."

We well remember the fine exhibits made by Mr. Bailey at New York a few years ago, and his death is a serious loss to the White Plymouth Rock fancy of this country.

***

The Stock-Keeper, London, England, editorially remarks:

"Mr. Tegetmeier in the course of an interesting though far too short article in the Agricultural Gazette, draws attention to the fact that many intelligent land-owners are very successfully rearing turkeys at large in coverts, and that the birds are stronger and in better condition than those raised in farm-yards. Here is certainly a fine field for experiment amongst poultry breeders in this country. amongst whom the turkey has earned a rather bad name for delicacy of constitution and early mortality. It must, however, be remembered, as Mr. Tegetmeier is at pains to point out, that it is not only desirable, but necessary, that the birds should be raised upon different ground every year, if possible, as turkeys are peculiarly susceptible to disease and weakness if bred upon foul land. Turkeys, on the other hand, no matter where they are bred, always do better if permitted to roost in trees than in a shed; and it will be also found that this arrangement saves a good deal of trouble to their attendant, though it must be admitted that the birds which enjoy this kind of liberty are a much easier prey to the poultry thief."

This explains briefly the true inwardness of Turkey culture. While the young "Turks" need considerable care until they "shoot the red," they certainly thrive amazingly afterward when allowed full liberty and unlimited range. The great success in raising Turkeys on Fishers Island is due to the magnificent range, the bay berry bushes and the woodlands.

***

This has made Fishers Island turkeys famous, and the recent shipment, as noted in another column of this issue, to England indicates the high esteem they are accorded on the other side of the "big pond."

***

Mr. Rowland Story, ex-secretary of the American Black Minorca Club, has gotten up a new and handsome catalogue describing his Minorcas, and Mr. J. H. Doane, the Black Minorca king of the North Woods, has also made a strong bid for the catalogue honors. Bro. Story, however, has gone Bro. Doane one better, however, and turned poet. Now, Bro. Doane "it's up to you" to surprise the fraternity.

***

A pigeon fly will take place at the Pan-American Exposition May 20th, the day set for the formal opening of the great event. Pigeon flyers should read Mr. Stanton's card, published in another column of this issue.

***

An Incubator Trust is the latest octopus that confronts us. There is one satisfaction, however; you cannot "trust" the hen in such a deal, but you can place your trust in her when it comes to hatching out chickens.

***

Nevertheless, the move made to consolidate the leading incubator and brooder firms into one great company is not a bad one. Competition at the present time is rather close and at times very fierce. The corners are shaved very close and goods are put on the market at a very low margin of profit. To make matters worse, methods of business are being used to secure trade that are not exactly in keeping with the ethics that govern legitimate trade. While the offenders are few, the contamination is liable to be great.

***

The writer of these notes nearly twelve years ago advocated a mixed grain diet for chickens, fed dry. The success in the last few years of the Fidelity Food, manufactured by the Pineland Incubator Co., and the Star Specific, put up by the Star Incubator Co., prove conclusively that the mixed grain diet is correct in practice as well as in theory. Sloppy food for chickens, young or old, is a relic of the past. As to ducks, the bran-meal-skim-milk combination is still a few pegs ahead of anything else. To put finishing touches and gain weight and secure high condition in thoroughbred fowls for exhibition, milk and lean beef, in addition to the usual grain diet, are unsurpassed.

English Shipments.

We celebrated May Day by making two shipments of turkeys to England, one consisting of two toms and four hens to Lady Burton, Rangemore, Burton-on-Trent, and the other consisting of two toms and eight hens to Mr. Bradley Martin, Balmacaan, Inverness. These turkeys are to be used as breeders on these famous old estates and sold at a big price, a conclusive proof that Fishers Island turkeys are appreciated very highly by our English cousins. They sailed May 2d from Hoboken, N. J., via Hamburg-American line, Steamer Columbia. This is the culminating sale of a heavy turkey business this season.

FISHERS ISLAND FARM.
Box 1, Fishers Island, N. Y.

To Members of the National Wyandotte Club.

The time has arrived when it becomes necessary to take up the matter of advertising space in our annual catalogue, which we desire to complete in time for the fall trade.

Those who have seen our last catalogue know the class of work we get out. It has been considered the finest ever issued, and many helpful articles by prominent and successful breeders has made it a handbook of useful information, which insures its preservation. The advertisements come into frequent notice by those who are most likely to make purchases from time to time, and as we open our advertising pages to members only, it in a way insures confidence in those who desire to purchase.

I would like to hear from those who desire advertising space as soon as possible, stating amount desired. Pages will be 6x9, costing as follows: Whole page, $6.00; half page, $4.00; quarter page, $3.00.

We also desire to increase our membership. The cost of same, including yearly dues, is one dollar.

C. S. MATTISON, Sec'y.
South Shaftsbury, Vt.

Song of the Golden Sebright Bantam.

I'm a golden yellow beauty,
Every feather laced with black,
And consider it my duty
That for pride I do not lack.
For my movements I try strutting,
Every step I take with care,
While my pencilled body and my wing
Show a style that's very rare.
I've a notion that the shaping
Of my tail is most unique,
Being the only rooster in the ring
With a "hen tail" all complete.
All the sickle feathers lacking,
No broad bars across my wing,
And my head looks as though backing
T'ward my tail to form a ring.
I've a rose comb that is perfect,
Brightest eyes and crimson face,
And with safety you'll elect me
As the "champion" of my race.

JOHN G. QUINIUS.
Dayton, Ohio.

Society Girl Sees Money in Eggs.

Miss Catharine Laughton, a popular young woman in Springfield and Boston society, has abandoned cotillons and pink teas for chickens. She has resigned the place to which birth and breeding entitled her to take up the mission of making two eggs grow where only one grew before.

With the remnant of her late father's fortune she has moved to Columbia, N. H., and purchased a large tract of land, several incubators and an assortment of blue blooded hens and roosters.

"I have only $2,500 cash and plenty of courage to work with at starting," she said recently. "I have a baby sister to support, and even our old home had to go. Friends offered us their hospitality, but I preferred to make my own way."

—Advertise in the American Fancier. Good results will follow.

Peru, Illinois.

JANUARY 15 TO 20.

The La Salle Peru Poultry and Pet Stock Association held their show at Peru on the above dates. The show was splendidly managed, and the Association owns their own coops, which are all of a uniform size, giving the hall a fine appearance. The pet stock display was very fine, among the pigeons several were awarded prizes at Chicago the following week. The Belgian hares were out in full force while the quality in the poultry classes was of the highest, notably in the case of the Langshan classes. This Association secured the Illinois State show by offering valuable cups for the following 10 highest scoring birds: Best cock, hen, cockerel and pullet, best display, best pen and highest scoring birds. This made competition very sharp as breeders from different parts of the state exhibited here. The five cups were all won by A. H. Asche of Princeton.

Following are the awards:

Barred P. Rocks—S L. Corke, Peru, 1st cock, 1st, 2d hen, 1st cockerel, 2d, 4th pullet, 1st pen, 1st pair. Frank and Joseph Linnig, 2d cock, 3d cockerel, 1st, 3d pullet, 3d hen, 3d pen, 3d pair. W. Bereiter, La Salle, 3d cockerel, 4th pen, 4th pair. George Shelton, La Salle, 4th hen. Hy. Hoppler, Peru, 2d cockerel, 2d pen, 2d pair.

White P. Rocks—Stryker Bros., Plainfield, Ill., 1st, 2d, 3d, 4th cockerel, 1st, 2d, 3d, 4th pullet, 1st hen, 1st pen.

Buff P. Rocks—All to C. C. Hassler, Hollowayville.

White Wyandottes—C. W. Johnson, La Salle, 1st, 3d cockerel, 1st pullet. A. B. Porter, La Salle, 1st cock, 1st, 2d, 3d hen, 3d pullet, 2d cockerel, 1st pen, 1st pair. August Nelson, La Salle, 2d cock, 2d, 4th pullet.

S. L. Wyandottes—Hassler, 1st, 2d cock, 1st, 2d, 4th cockerel, 1st pullet, 1st, 3d pen, 1st pair. Hy. Hoppler, Peru, tied 1st, 2d, 3d, 4th pullet, 3d cockerel, 2d pen, 2d pair. G. Zacher, Peru, 3d cock, 2d, 3d hen, 3d, 4th pair, 4th pen.

G. L. Wyandottes—P. B. Halm, Peru, 1st, 2d, 4th pullet, 3d, 4th cockerel, 2d, 3d, 4th hen, 2d pen, 2d pair. Hoppler, 1st cock, 1st hen, 1st, 2d cockerel, 3d pullet, 1st pen, 1st pair.

Buff Wyandottes—R. Mariett and A. Weeker, Peru, 2d cock, 1st, 2d hen, 1st cockerel, 1st, 2d, 3d pullet, 1st pen.

Black Langshans—E. P. Smith, Springfield, Ill., 3d cockerel, 1st pullet, 2d pen. W. W. Winan, Dana, Ill., 2d, 4th hen, 4th pen. C. Walter, Hollowayville, 2d cock, 3d hen, 2d pullet, 1st pair, 3d pen. A. H. Asche, Princeton, 1st cockerel, 1st hen, 3d, 4th pullet, 1st pen. R. Boutwell, 4th cockerel.

White Langshans—A. B. Marshall, Streator, 2d hen. Miss Rose Hoppler, Hollowayville, 2d cockerel, 3d hen, 1st pair. Asche, 1st cock, 1st, 4th hen, 1st, 3d cockerel, 1st, 2d, 3d, 4th pullet, 1st pen.

Partridge Cochins—B. F. Forest, Henry, Ill., 1st cock, 1st, 3d, 4th hen, 1st, 2d, 3d, 4th cockerel, 1st, 2d, 3d pullet, 1st, 2d pen, 1st pair. W. Bereiter, La Salle, 2d hen, 4th pullet, 2d pen, 2d pair. J. W. Westwood, Streator, 4th pen. B. L. Clark, Princeton, 4th cockerel.

Black Cochins—C. Walter, Hollowayville, 1st cock, 1st, 2d hen.

Buff Cochins—Hoppler, 1st cock, 1st, 2d, 3d, 4th hen, 1st cockerel, 1st pen, 1st pair. Henry Allen, La Salle, 2d cock, 2d, 3d cockerel.

Light Brahmas—Fred. Tesche, Peru, 1st cock, 1st cockerel, 1st, 2d, 3d, 4th hen, 1st pair, 1st pen. Clark, 2d, 3d, 4th cock.

S. C. Brown Leghorns—Goodell, La Salle, 2d cock, 1st hen, 1st, 3d, 4th cockerel, 1st, 2d, 3d, 4th pullet, 1st pair, 1st pen. Chank & Liswell, 1st cock, 2d cockerel, 2d pair.

S. C. White Leghorns—Arthur Armstrong, 1st, 3d, 4th pullet, 2d hen, 1st cock, 2d pen, 2d pair. Ira Goodell, 2d cock, 1st, 3d, 4th hen, 1st, 2d, 3d, 4th cockerel, 2d pullet, 1st pair, 1st pen.

Houdans—All to F. Batchelder, Peru.

S. S. Hamburgs—W. L. Solomon, Streator, 2d cock, 1st hen, 1st pair. Anton Bonn, Peru, 1st cock, 2d hen.

B. B. Game Bantams—Joseph Gaul, La Salle, 1st cock. 1st, 2d, 3d pullet. George Quigley, La Salle, 2d cock.

Buff Pekin Bantams—Hoppler, 1st, 2d cock, 1st, 2d hen, 1st, 2d pair. August Wagner, La Salle, 3d cock, 3d hen.

Pit Game—Frank Ladd, Peru, 1st, 3d cock, 1st, 2d cockerel, 1st, 2d, 3d, 4th pullet, 1st, 2d, 3d hen. A. Bowie, La Salle, 4th cock, 4th hen, 1st pair. G. McGann, La Salle, 2d cockerel. Edward Baker, Peru, 2d cock.

Mammoth Bronze Turkeys—O. J. Piper, Arlington, 1st, 2d cock, 1st, 2d hen, 1st, 2d, 3d, 4th cockerel, 1st, 2d, 3d, 4th pullet, 1st, 2d, 3d pair, 1st, 2d pen.

White Holland Turkeys—C. Walter, Hollowayville, 1st cock, 1st, 2d cockerel, 1st, 2d, 3d, 4th pullet, 1st, pen.

Akron, Ohio.

JANUARY 9 TO 12.

Barred P. Rocks—Cock 1st 91½, J. H. Seeton; 2d 88½, George Conger; 3d 88, H. H. Hatch. Hen 1st 91½, 2d 91, Seeton; 3d, H. G Maltbie. Cockerel 1st 91½, Seeton; 2d 90½, Conger; 3d 90, Charles Hibbs. Pullet 1st 92½, 2d 91, 3d 91, Seeton. Pen 1st 183¼, 2d 182¼, Seeton.

White P. Rocks—Cock 3d 86, H. A. Strole. Hen 1st 91½, 2d 91½. J. S. Parker; 3d 90, H. A. Strole. Pullet 1st 94, 2d 93½, 3d 93, Parker. Cockerel 1st 93, Parker; 2d 92, W. W. Wuchter; 3d 92, Parker. Pen 1st 186½, Parker.

S. L. Wyandottes—Cock 1st 90, F. D. Bennett; 3d 87½, F. Palmer. Hen 1st 91½, 2d 91, Palmer; 3d 91, Bennett. Pullet 1st 91½, 2d 91, Bennett. Pen 1st 181, Bennett; 2d 178½, Palmer.

Golden Wyandottes—Cock 3d 85½, hen 2d 90, E. R. Schultz.

White Wyandottes—Cock 1st 90½, Charles McClave; 2d 89, C G. Bersticker; 3d 89, Parker. Hen 1st 94, Parker; 2d 93½, Bersticker; 3d 93, McClave. Cockerel 1st 93½, McClave; 2d 91½, Parker; 3d 90½, A. O. Rehm. Pullet 1st 95, 2d 94½, Parker Pen 1st 186½, McClave; 2d 185⅝, Parker; 3d 181⅜, George Besaw.

Buff Wyandottes—Cock 1st 91½, V. Crabtree. Cockerel 1st 92, Crabtree; 2d 89, 3d 88½, R. R. Lawrence. Pullet 1st 92½, Parker; 2d 92, 3d 91, Crabtree. Pen 1st 182¾, Crabtree; 2d 179¼, Parker.

Light Brahmas—Hen 3d 85½, S. K. Black. Cockerel 2d 88½, pullet 1st 91, H. L. Berry.

Dark Brahmas—Cock 1st 90½, H. L. Baish. Hen 1st 90, McClave; 2d 89½, Baish. Cockerel 1st, 2d 88, Baish. Pullet 1st 91½, 2d 90½, Baish.

Buff Cochins—Hen 1st 90½, 2d 89½, cockerel 2d 89½, 3d 85½, pullet 1st 90½, 3d 87½, William Darkow.

Partridge Cochins—Hen 1st 92½, McClave.

Black Langshans—Cock 2d 88, Dr. E. O. Leberman. Hen 1st 92½, 2d 91½, 3d 91½, Dr. Leberman.

S. C. Brown Leghorns—Cock 1st 90, Charles Limric. Hen 1st 91½, John Gauthier; 2d 91, E. Kauffman; 3d 91, Limric. Cockerel 1st 92, 3d 91½, Gauthier; 2d 92, E. Samuels. Pullet 1st 92½, Samuels; 2d 91½, E. Kauffman; 3d 91, Gauthier. Pen 1st 183¾, Gauthier; 2d 178⅜, F. Dethloff.

S C. White Leghorns—Cock 1st 92, Dethloff; 2d 90½, James Lyons; 3d 90, Dethloff. Hen 1st 93½, Dethloff; 2d 93, 3d 93, Maltbie. Cockerel 1st 93½, 2d 92½, Dethloff; 3d 90, Maltbie. Pullet 1st 94½, Dethloff; 2d 94, Lyons; 3d 93, Maltbie. Pen 1st 186⅝, Dethloff; 2d 180½, Maltbie.

R. C. White Leghorns—Cock 2d 88, Charles Smith. Hen 1st 92, Smith. Cockerel 1st 90, Smith; 2d 89, Dunn. Pullet 1st 93½, Smith; 2d 92½, 3d 91, Dunn.

Buff Leghorns—Cockerel 2d 89, O. G. Reese; 3d 87½, M. Renner. Pullet 1st 91½, 2d 91, Reese; 3d 90½, Renner. Pen 1st 176½, Renner.

S. C. Black Minorcas—Cock 1st 91, R. M. Mairet; 2d 90, R. F. Palmer & Sons; 3d 89½, H, B. Gregory & Son. Hen 1st 92½, 2d 92½, Palmer & Sons; 3d 91½, Gregory & Son. Cockerel 1st 94, Mairet; 2d 94, 3d 93½, Palmer & Sons. Pullet 1st 94½, 2d 94. Gregory & Son; 3d 94, Palmer & Sons. Pen 1st 187½, Palmer & Sons; 2d 186, Mairet; 3d 179¾, Gregory & Son.

S. C. White Minorcas—Cock 3d 86, G. H. Stickney. Hen 1st 94, C. H Worley; 2d 90, 3d 90, M. H. Warner. Cockerel 1st 92, Worley; 2d 90½, 3d 90½, Stickney. Pullet 1st 93, 2d 91, 3d 90½, Stickney.

W. C. Black Polish—Hen 1st, 2d 94½, F. Heiser. Cockerel 1st 91, McClave. Pullet 1st, 2d 94, F. Heiser.

G. S. Hamburgs—Hen 1st 90½, 2d 90½, 3d 90½, cockerel 1st 94½, 2d 90½, pullet 1st 93½, 2d 93, 3d 92½, Julius Frank & Son.

S. S. Hamburgs—Cock 1st 90, 2d 88½, hen 1st 93, 2d 92, 3d 90½, cockerel 1st 90½, 2d 90, 3d 89½, pullet 1st 91, 2d 91, 3d 90, pen 1st 182½, Frank & Son.

G. P. Hamburgs—Cock 1st 94, 2d 92½, 3d 92, hen 1st 93, 2d 91, 3d 90½, cockerel 1st 90½, 2d 89½, pullet 1st 94½, 2d 94½, 3d 93½, Frank & Son.

S. P. Hamburgs—Hen 1st 91½, 2d 91, 3d 91, cockerel 1st 92, 2d 91½, 3d 91, Frank & Son.

White Hamburgs—Cock 1st 91, 2d 90½, hen 1st 93, 2d 92½, pullet 1st 94½, 2d 94, 3d 93½, Frank & Son.

Black Hamburgs—Cock 1st 90, Frank & Son; 2d 89½, William A. Orr & Son. Hen 1st 96, Orr & Son; 2d 93½, 3d 91, Frank & Son. Cockerel 1st 94, Hatch; 2d 93, Orr & Son; 3d 93, Frank & Son. Pullet 1st 95, Darkow; 2d 94½, Hatch; 3d 94, Frank & Son.

Pit Game—Cock 1st, Boyd Brobst; 2d, Lee Spidle; 3d, B. J. Hill. Hen 1st, 3d, Spidle; 2d, Brobst. Stag 1st, 2d, 3d, pullet 1st, 2d, 3d, Brobst.

Phoenix Game—Cock 1st, A. Kastner.

Bronze Turkeys—Cock 1st, hen 1st, McClave. Cockerel 1st, pullet 1st, Strole.

White Turkeys—Cock 1st, hen 1st, James Lyons. Cockerel 1st, pullet 1st, McClave.

Pekin Ducks—Old pair 1st, McClave; young pair 1st, 2d, Rehm; old pair 2d, young 3d, Hill.

Ducks—All to McClave.

Toulouse and Embden Geese—All to McClave.

Brown China Geese—1st, McClave; 2d, Strole.

White China Geese—1st, McClave; 2d, Lyons.

Sharon, Pa.

JANUARY 17 TO 19.

On our way to the Wooster show we stopped off at Sharon for a day and found one of the best home cooped shows ever our good fortune to see, and every member of the Club a genuine enthusiastic fancier. About 500 birds were in the room, a majority of them being of good quality, the White Rocks leading in numbers with the Barred a close second. Judge Zimmer was on the scene early and ground out the birds to the satisfaction of all. H. L. LAMB.

Following are the awards:

Barred P. Rocks—J. A. McCutcheon, Grove City, Pa., 1st cock, 2d, 3d hen, 2d, 3d pen, 4th cockerel tie. H. H. Hatch, Southington, Ohio, 2d cock, 2d cockerel. Jno. M. Powers, Girard, Ohio, 1st hen, 3d cock. Wm. Darby, Neshannock, Pa., 4th cock, 4th pen. James Moyer, Cochranton, 1st cockerel, 3d hen, 4th pullet. George E. Hamilton, Jackson Center, 3d cockerel, 1st pullet tie, 3d pullet, 1st pen. J. W. & S. J. Round, Niles, Ohio, 1st pullet tie, 4th cockerel.

Buff P. Rocks—J. S. Rutter, New Castle, 2d cock, 1st cockerel, 1st, 2d hen. W. E. Applegate, Sharon, 3d cock, 3d cockerel, 3d hen, 3d pen tie. Robert Knox, Youngstown, Ohio, 4th cock, 4th hen tie, 3d pen tie. Mrs. M. E. Cope, Sharon, 2d cockerel, 1st pullet, 2d pullet tie, 1st pen. Wm. S. Lewis, Sharon, 4th cockerel tie, 3d pullet. A. V. Bates, Hailford, Ohio, 4th hen, 2d tie pullet, 4th pullet, 4th tie cockerel, 2d pen.

White P. Rocks—James S. Hoffman, Sharon, 1st cock, 1st, 2d cockerel, 1st, 2d, 3d, 4th hen, 1st, 3d pullet, 1st, 2d pen. John Tamplin, Sharon, 2d cock, 3d cockerel, 4th pullet, 3d pen. Gem Poultry Yards, Youngstown, Ohio, 4th cockerel, 3d pullet, 1st pen. R. M Albright, Hubbard, 4th pullet.

White Leghorns—J. W. Harwood, Jamestown, N. Y., 1st cockerel. G. E. Hamilton, 2d cockerel 2d tie pullet. Hassell, 3d, 4th cockerel, 1st, 2d tie pullet.

Buff Leghorns—Thomas, 1st, 4th cockerel. Gibb S. McClelan, Greenville, 2d cockerel. H. B. Cole, Kinsman, Ohio, 3d cockerel, 4th pullet. Charles Stringer, Girard, Ohio, 1st, 4th hen. J. W. & S. J. Round, 2d, 3d hen. L. L. Hightree, Latimer, Ohio, 1st, 2d pullet. George E. Emerson, Union City, 3d pullet.

Black Minorcas—Robert Knox, 2d cock, 2d, 3d, 4th hen, 2d pen. Wm. McBride & Son, Sharon, 3d cock, 3d, 4th cockerel, 2d, 4th pullet, 1st pen. McFarland, 1st cockerel, 1st pullet. S. M. Sample, West Middlesex, 3d cockerel, 3d pullet. Jno. Hutchison, Jr., Greenville, 1st hen.

White Minorcas—All to John McBride, Sharon.

S. S. Hamburgs—Clingan, 1st cock. Oliver Jones, Greenville, 1st cockerel, 1st, 2d, 3d, 4th pullet. Hamilton, 2d cockerel, 1st hen.

Black Hamburgs—All to Clingan.

Houdans—H. T. Allen, Sharon, 1st cockerel, 1st, 2d hen, 1st pullet, 1st pen. Hassel, 2d, 3d, 4th pullet.

Black Breasted Red Game—All to McLean.

White Indian Game—All to Higgins.

Cornish Indian Game—H. B. Cole, Kinsman, Ohio, 1st cockerel, 2d pullet. J. O. Haushman, Kinsman, Ohio, 2d cockerel, 1st pullet. George W. Higgins, Sharon, 3d cockerel, 3d pullet.

Joseph Wallace, Youngstown, 2d pullet. Jno. J. Remler, Meadville, 4th pen.

Silver Wyandottes—W. H. Chalker, Girard, 2d cock, 1st hen, 1st tie pullet. Wallace, 1st cockerel 3d pullet. McCutcheon. 2d cockerel, 2d, 3d hen, 1st pen. F. A. Stewart, Sharon, 3d, 4th cockerel, 4th pullet. Thomas Thomas, Sharon, 1st tie pullet.

Golden Wyandotttes—Marvin B. Homer, Greenville, 2d cock, 1st, 2d cockerel, 3d hen, 1st, 2d pullet. G. E. Hamilton, 1st, 2d hen.

White Wyandottes—J. D. Tribby, Brookfield, Ohio, 1st cock, 3d cockerel, 4th hen, 4th pullet, 1st pen. J. H. Jones, Hydetown, 2d cock, 1st cockerel, 3d hen. L. H. Smith & Son, Union City, 2d cockerel. Edward Blunt, Warren, 1st, 3d hen.

Buff Wyandottes—Ernest Cope, Sharon, 4th cockerel. Edward Hassel, Sharon, 1st, 3d, 4th pullet. R E. McFarland, Brookfield, 2d pullet.

Black Wyandottes—All to H. H. Clingan, Hubbard, Ohio.

Black Javas—All to S. J. Foster, Prager.

American Dominiques—Clingan, 4th hen.

Light Brahmas—Valentine Foster, Hermitage, 4th cock, 1st, 2d, 3d cockerel, 4th pullet. G. W. Higgins, Sharon, 4th cockerel, 1st, 2d hen, 1st, 2d, 3d pullet.

Buff Cochins—All to C. C. McLean, Meadville.

Black Langshans—All to Hewitt & Smith, Union City.

S. C. Brown Leghorns—E. S. Schaller, Clark, 1st, 2d cock, 1st tie and 3d cockerel, 2d, 4th hen, 4th pullet, 2d pen. Conover & McCutcheon, Titusville, 1st tie cockerel, 3d hen, 1st, 2d, 3d pullet, 1st pen. H. L. Lamb, Cambridge Springs, 4th cockerel, 1st hen.

R. C. Brown Leghorns—Jones, 1st cockerel, 2d hen. W. B. Isenberg, 2d cockerel, 3d hen, 1st, 2d,

White Game Bantams—All to J. D. Whiteman, Mercer, Pa.

White Rose Comb Bantams—All to Clingan.

Golden Sebright Bantams—S. J. Foster, 1st cock, 2d hen. Bates, 2d cockerel, 3d hen, 3d, 4th pullet, 2d pen. Lamb, 3d cockerel, 1st hen, 2d pullet.

S. S. Bantams—Foster, 1st cockerel, 1st pullet. Lamb, 1st hen.

Buff Cochin Bantams—All to Hamilton.

White Cochin Bantams—All to Foster.

Buff Orpingtons—J. W. & S. J. Round, 1st, 2d cock, 1st, 2d hen. Ernest Cope, 1st cockerel, 3d pullet. Wm. Hightree, Nutwood, Ohio, 2d cockerel, 2d, 3d pullet, 1st pen.

Pit Game—W. J. Munnel, Sharon, 1st cock, 2d cockerel, 2d hen. Kettering, 3d cock, 3d hen. J. W. & S. J. Round, 1st cockerel Hunter Bowie, Hermitage, 3d cockerel, 1st hen, 1st pullet. Jerry Saul, Sharpsville, 2d, 3d pullet.

White Pekin Ducks—Hamilton, 1st pair. Milton Becktel, Sharon, 2d pair.

Belgian Hares—A. Creighton, Sharpsville, Pa., 1st pair.

White Common Rabbits—S. P. Kettering, Sharon, 1st, 2d pair.

Ancona Rabbits—All to Oliver Jones.

Bronze Turkeys—All to L. O. Harshman, Kinsman.

Pens—J. S. Hoffman, 1st pen American class. McLean, 1st pen in Asiatic class. Conover & McCutchen, 1st pen in Mediterranean class.

Egg Testers Go On Strike.

Chicago, April 27.—A unique strike, scheduled to take place in South Water street recently, promised to affect materially the supply of eggs in the Chicago market. The strikers were members of the Egg Inspectors' Union who test and grade the eggs which come to the commission houses. A strike was ordered at all houses which refused to sign a new scale of the union.

Buff Wyandotte Cockerel and Pullet. Winners of First

AN IDEAL FANCIERS' PAPER.

The American Fancier is O. K. More like an ideal fanciers' paper.

F. A. KELLER.

Pigeon, Pa., May 1st, 1901.

SURE SALE MAKER.

Editor American Fancier: I am pleased to let you know that an advertisement in your paper is a sure sale maker. I sold over fifty dollars' worth of fowls through the last two months, all due to the small advertising in your valuable paper. C. A. MACK.

East Greenville, Pa., Dec. 3, 1900.

Poultry Diseases.

Encouraged by the kindly reception accorded to my book treating on the diseases of pigeons, I have decided to make known such knowledge as I possess of the ailments of poultry, hoping that my exposition of the various maladies of which I shall treat may prove not only interesting, but also helpful to breeders generally, and more especially to beginners in poultry culture, as well as others unconversant with the ills to which fowls, no less than our human selves, are liable. Although the subject is a "tickle one to tackle," and, viewed from a scientific standpoint, almost inexhaustible, I do not propose to treat of it superficially; neither do I intend to attempt to go beyond my depth physiologically.

We nineteenth-century mortals live in times of haste. Everybody wishes to gain information with the least possible expenditure of time and trouble. Old-world notions of "slow and sure" won't do now-a-days. Even sickness and disease must be quickly cured, or man becomes impatient, throws physic to the dogs and says, "I'll have none of it." Now, I am afraid I shall disappoint my readers if they are expecting me to wave the conjurer's wand, cry "Hey, presto!" and furnish them with remedies that will act magically in cases of sickness among the feathered tribe—fowls, to and saves an immense amount of trouble. It goes almost without saying that many of the ailments affecting our feathered friends are preventible—not at all times, perhaps, but certainly in the majority of cases; such for instance as crop binding, feather or egg eating, and those forms of roup usually the outcome of want of method and cleanliness in housing or feeding. Other usually preventible diseases might be enumerated, but with these I shall deal in due course.

How much better for the birds, and more profitable for the owner it would be, if fanciers and breeders of poultry would study and apply a few of the simple laws of hygiene, when putting up houses or feeding their pets; instead of which (and I am sorry to say it) many persons go on the "happy-go-lucky" principle, trusting to chance, as it were, until, perhaps, some highly contagious disease manifests its destructive power by carrying off the choicest specimens of a whole season's breeding and leaving behind a deadly taint most difficult to expel. Ruin, at one time or another, has stared some of the most astute poultry breeders in the face, and all through neglecting the commonly accepted rules pertaining to the prevention of disease and the preservation of health; whereas by the exercise of a little forethought, this or that malignant sickness might have been easily prevented. In this respect, as in other affairs of life, 'tis the better than cure," and sufficient also has been said to enlist my readers' attention to the all-important subject of cleanliness, without doubt an indispensable condition of successful poultry culture, though I am afraid this fact is not generally realized, i. e., if I may judge by the filthy state of some breeders' establishments, for I have seen high class stock existing in most unsanitary quarters. Want of cleanliness has much to be answerable for, being one of the most fruitful sources of disease. Dirty roosting quarters, dirty drinking vessels, dirty nests and dirty hampers are each incentives to sickness of one kind or another. Why should fowls any more than human beings be expected to maintain a healthy vigor if the air they breathe be impure? Yet some breeders never think of this. Then, polluted ground must be mentioned as a certain propagator of disease; in fact, so fatal to success is the keeping of fowls on ground that it has become polluted with their own excrement, that contravention of the generally accepted rule, not to do so, would be regarded as little short of madness. This is scarcely the time and place to write of the many advantages to be gained from a "free range," though in passing it may be remarked that farmers' fowls, which usually have entire liberty, seldom suffer from disease.

Lime and labor are cheap; there is, therefore, no excuse on the score of cost

at Boston, Nineteen Hundred and One. Owned and Bred by Mattison & Dutcher.

wit. "Patience is a virtue," and in nowise is this well-worn motto more applicable than when disease has to be contended against. Some persons make the great mistake of drugging and doctoring their fowls without the slightest rhyme or reason, while others neglect the timely administration of those simple remedies that in the great majority of cases would ward off further trouble. Again, Nature—that great auxiliary in cases of sickness—should be studied to the uttermost. Every organ of the body requires time to perform its functions, and if this be so in health, how imperative it becomes that patience should be exercised when sickness or disease is present. The questions at issue are generally these: What ails my fowl? Should or should not medicine be given? And if so, what?

Prevention Better Than Cure.—A very old axiom this, yet it cannot be improved upon, for not only is prevention better than cure, but it is also free from danger little things that are so frequently neglected; being looked upon as of too trifling a nature to be worth serious attention.

Let me illustrate my meaning. A fowl may appear dull and listless—a little "out of sorts," as it is commonly called. In reality an attack—slight perhaps—of cold or catarrh is coming on. The symptoms are regarded as too common place or trivial to absorb more than a passing notice; consequently the ailing bird is left in its run (which, perhaps, is in an exposed situation) to "take its chance." Now this chance system of procedure is highly favorable to the development of roup—a disease that quickly spreads, and one that frequently originates in a case of cold neglected; whereas by timely removal of the invalid bird to a sheltered pen, and the administration of a suitable remedy, further trouble may be often averted, and a cure speedily effected. No further reflections are needed to prove that "prevention is why poultry houses should not be kept as sweet and clean as human dwellings are supposed to be. This brings me to ventilation, another part of the programme that is sometimes inadequately performed, but more frequently omitted altogether. Every fowl house—or any building in which live stock is kept, for the matter of that—should be, and must be, efficiently ventilated if the inmates are to escape sickness and disease, and be robust and vivacious. A whole column might be written on this most important subject, but for the present I must forbear, though it will not be out of place to remind my readers that v. e. n. t. i. l. a. t. i. o. n. does not spell draught, a by no means unnecessary injunction, as can easily be proved. Ventilating a building consists in drawing off or expelling the foul or stagnant air therefrom, and introducing that which is fresh and pure. There are many mechanical contrivances for doing this effectually, none perhaps better than Boyle's and Howarth's inventions, though neither of these appliances can be considered cheap. An inventive mind will not have much difficulty in contriving an arrangement of the doors and windows of his fowl house so as to ensure free ingress and egress of air, and without perceptible up or down draught. A few words on overcrowding must be included in my introductory remarks: much need not be said, for nearly every text book on poultry-keeping devotes a fair amount of space in condemnation of this quite common pitfall—yes, quite common pitfall, for few breeders escape its snare. It's so easy to fall a prey to the delusion that it is profitable to keep a large flock. How many a time has some ardent fancier said to himself, "Just one or two more, can't make much difference." Yet it is just the one or two more that make all the difference. (My strictures on the baneful effects of polluted ground, under the heading of "Cleanliness," equally apply here.) It may be taken as a solid fact that no person who overcrowds his yards succeeds in maintaining the health of his stock.

Food and feeding call for a large share of attention, for not only has the quality of the grain also to be considered, but the mode of feeding must be discussed. I regret to say it, but there are still a few penny-wise and pound-foolish kind of poultry-keepers, who think that "tail corn" or "hinder ends" as it is called in some districts—is plenty good enough for the "cocks and hens," and so it may be for those that have an unlimited run over rich pasture land and fertile fields, and free access to the milk pails and house scraps of a wasteful cook, but as a staple means of existence for fowls that are kept in confined runs, and have not a free range, I unhesitatingly say that such poor dietary should not be given. "Weighed in the balance and found wanting" is an adequate description of the feeding value of tail-corn or hinder-ends. It has been proved over and over again that the best grain is the cheapest, and by the best I do not necessarily mean the most expensive, but good, sound, plump, and well-harvested corn. It should be neither too old nor too new, for the one is as injurious as the other, the former having lost many of its nutritive elements and is frequently either fusty or mitey. Newly harvested grain is equally pernicious, being difficult to digest, swells in the crop, and frequently causes an impaction. Barley matures more quickly than wheat, and may therefore be used quite three months sooner. I prefer keeping the latter until the spring of the year following that in which it is grown.

Soft foods i. e., those biscuit and meal preparations usually given in a moist state, should, in all cases, be freshly prepared, otherwise they may become a fruitful source of sickness, if not of actual disease, owing to the acetous fermentation that invariably takes place when they have been mixed for any length of time before being used. This injunction is especially noteworthy during the summer months, fermentation being greatly accelerated by heat. Although little suspected, perhaps, the heavy mortality of chicken in some yards is directly due to the fermentative change that has taken place in the soft food upon which chicks are chiefly reared. As a matter of course the vendor of meal gets blamed for supplying an inferior article, whereas the real onus of guilt rests on one's own shoulders!

Over-feeding, as well as under-feeding, each contribute to sickness and disease, over-feeding being more baneful in its effects than is generally imagined. The domestic fowl is not exclusively granivorous, and it will be well to remember this when ministering to its daily wants. Over-feeding with either soft food or grain unduly taxes the digestive organs and blunts the natural craving for insects, green food, and the thousand-and-one odds-and-ends that fowls having a free range usually devour. The laws of natural economy must not be trifled with if sickness and disease are to be successfully prevented or cured. — Richard Woods in Stock-Keeper, Eng.

(To be continued.)

The New York and Boston Shows.

Editor American Fancier: The subject of Poultry and Pigeon Shows at this time of the year would seem quite out of date were it not for the fact that time passes too rapidly for most of us, and we must therefore make plans now for future happenings.

Your comments on the clashing of dates of the Boston and New York Shows are timely. Fanciers are now too busy with their many duties to enter many protests or complain about mistakes, but while I am pretty well taken up with my duties, I must take a few of your moments to say that, in my humble opinion, the holding of two very large and expensive shows (one at New York and the other at Boston) during the same week will be a serious affair for the fancy, especially so after the season for showing is past. I am not alarmed for fear that two large shows cannot be provided for in this manner, but for the safety of the exhibitors and public there should be given some consideration. I write from a disinterested point. I am not at all interested in either Association but as one who is interested as a fancier in seeing two splendid societies as these flourish. I ask, cannot something be done?

The National Bantam Association has voted to divide equally all specials between New York and Boston. Many of the exhibitors would like to show at each city. Under this plan it would be almost out of the quesiion for an exhibitor to have entries at both shows. Boston set her dates first. There is no reason to think that Mr. Crawford, as Sec'y of the New York Show, would choose the same week if it had been possible to have secured other dates for Madison Square Garden. The New York end of it is a difficult problem and a hard one to handle. What about Boston? Could they possibly change their dates? It would be a gallant act. The members of the society are equal to it if such a plan be possible. We are quite sure of that. Will they consider it? I am quite certain they will do all in their power to avert what now appears on paper to be a serious affair for the poultry fanciers to contemplate. If no change can be made, then may we look for the best results obtainable under the existing circumstances, but until it is proven that there is no alternative, let us hope that some kind of an arrangement can be effected which will result in no confusion at two of our great popular winter exhibitions. E. LATHAM,

Flatbush, N. Y., May 7, 1901.

Select A Judge.

The Webster City Poultry Association has selected Thomas F. Rigg, of Iowa Falls, Iowa, as judge, with dates from Dec. 30th to Jan. 4th, 1902. This Association is two months old and has a membership of eighty one, with over $225.00 in cash and specials already donated to its support. A cordial invitation is extended to all within our territory to join us.

FRED HAHNE, Sec'y,

Webster City, Iowa, May 6.

The Plague of Rats.

The plague of rats of which so much is heard this year forms a very serious difficulty for poultry breeders to grapple with, and many are the expedients which are suggested for ridding premises of the presence of the vermin. Of course nothing can equal a good cat or two, but, unhappily, cats which kill rats very often display a taste for chickens, and it is not always easy to shut the animals up for the day when the birds are at large. When spring traps are set there is always the risk incurred of a careless attendant forgetting them when the birds are let out, the danger of this being obvious; still they are so effective that they are worth trying in spite of risks. They should be sunk a little in the ground and lightly covered with earth or dust—the late Mr. George Ure of Broughty Ferry, N. B., used always to spread a newspaper over the rats' run for a day or two, and

Stearns New Model No. 7

Ball Bearing Bone Cutter

Back Geared Three to One.

It is geared to save power, making it the easiest running, fastest cutting bone cutter ever built. It will cut anything a fowl will eat—green or dry bone, gristle, meat, corn or vegetables. Self-regulating. *It cannot be clogged.*

Green cut bone brings the young chick to maturity quicker than any other food. Our book, "How to Make Poultry Pay," explains how and why. Sent *free.*

E. C. STEARNS & CO.,

Box 12 Syracuse, N. Y.

when the animals became familiar with the sight of it he slipped the traps under the paper—and it is well that a little food should be scattered about. Some people wear gloves when they touch the traps in order to prevent the rats smelling out the fact that they have been touched by human flesh, whilst others drop a little oil of rhodium on the traps with the same object, and also to attract the vermin. If rats get into the corn bin, meal tub or sack the traps can be lightly buried under the contents, and this is an easy way of capturing the pests.

Some people destroy rats by mixing up plaster of Paris with meal in a dry form and placing it in saucers about the place, whilst others use phosphorus paste, which is deadly in its way, but if the rats get away to die they create a dreadful smell and get their revenge that way. When rats frequent a building and poison and traps are objected to, they may often be captured by adopting the following method: Take an ordinary cask, fill it a few inches deep with water and place half a brick at the bottom, the water just covering this by about an inch. Place the cask in position so that the rats can easily reach the top and cover the top with strong brown paper stretched tightly over it, like the parchment at the side of a drum. Place some meal or corn on the paper and encourage the rats to come there to feed. When you have satisfied yourself that they do so and have lost all fear of the cask, cut a cross about nine inches long in the centre of the brown paper with a sharpe knife and lay the corn or meal in the middle of this where the lines cross each other. The idea is that the first rat which comes along will fall through and when he gets upon the half brick will squeak: the next rat which comes to see what the noise is about goes through too, and as there is only room for one on the top of the half brick the two animals fight for possession and squeal loudly. This brings many more rats upon the scene as they are most inquisitive beasts and the result is often the capture of six or eight a night. We can speak of the success of this kind of trap, for we have taken as many as nine, and very often five or more rats in one evening by acting as described above.—Stock-Keeper, England.

Twelve Reasons For Using An Incubator.

Because you can raise chicks any time.

Because prices of chickens are as high to-day as they ever were.

Because the supply never has been nor is now equal to the demand.

Because there has never been an oversupply of poultry on the market.

Because it requires a very small investment to realize a good large income.

Because you can hatch them in large numbers with but a nominal expense.

Because you have less trouble hatching with an incubator than with the hen.

Because you can hatch chicks when you can get the most money for them.

Because raising poultry can be made to pay better than corn, oats or most of the farm products.

Because you can keep your hens laying all the time if you do not let them hatch.

Because hatching chicks with the incubator is a labor-saving and a money-making business.

Because you can hatch chicks during the coldest weather by placing the incubator in the cellar.—Shoemaker.

The American Langshan Club Catalogue.

The catalogue of this Club has been received at this office. Judging from the size and style, it demonstrates that this noble breed is again receiving the attention it deserves. The Langshans have long been considered one of the leading breeds, and with the efforts of this Club they will soon become more popular than ever before. Everyone intending to start breeding fancy poultry or adding another variety to their yards, should send for one of these catalogues. The Langshan breeder who does not receive a copy of it should send for it at once, It contains the by-laws and the application blank which, when filled out as requested and sent to the secretary with $1 admission fee will receive immediate attention. The benefits to be derived by joining the Club are many, besides the satisfaction of seeing your favorites elevated to the high position they deserve. This has been and is yet, the aim of this Club; that they have succeeded in their efforts is clearly demonstrated by this catalogue and the popularity the Langshans are enjoying. Send for the above to A. H. Asche, Secretary, Princeton, Ill.

Selling Culls.

Editor American Fancier: In answer to Messrs. Wood & Freeman, who call upon breeders to enlighten them as to what constitutes culls, would say the poorest birds that you can pick from your flock are culls, irrespective of price asked, and are not fit for any man to breed from, although they have both the feathers and name. They are just as worthless for breeding as the male you bought at your claimed big price, because he would not breed, notwithstanding he might have been a fair or even good show bird. I believe any man desiring to add new blood wants good birds as well as feathers and name, and asks to know what is the best you can do for him and never says, "What will you take for the poorest you have?" for they also have the feathers and name.

Their prescription against swelled head can only be held down by a $2.00 entry fee at the largest shows, and if their prescription was followed would not the poor breeders' heads "bust" entirely and condemn the business and not the judge after supplying themselves with some of their vigorous breeding cockerels that they claim are just as good for $2.00 to the few as the $5.00 ones are to the many? I am surprised at their publicly heralding to ship birds on approval.

J. F. TALLINGER.

Rochester, N. Y.

Rouen Ducks.

Editor American Fancier: Mr. G. H. Brackenbury in one of your recent issues speaks chiefly of breeding for color in Rouens, and is somewhat sophistical, so I have to again sound a warning note. I have tried to breed birds from Rouens that have not had a recent introduction of imported blood. I have mated ducks for a friend to correct faults by the judicious use of imported stock with those of American breeding for generations, and I have experimented myself with such ducks with defective plumage, in each instance to find that it was very unsatisfactory and birds of high merit approaching standard requirements could not be produced without a long continued process of selection. It was manifest that there had been long years of neglect, if not an introduction of alien blood into American flocks, until it was folly to attempt to reach excellence in plumage, size and shape by the process spoken of, so long as they had to compare with imported birds. It seems that in Europe greater attention has been given to this particular variety, while America has been retrogressive, if not worse.

Where Mr. Brackenbury is wrong is in that his words might lead anyone to waste years in the process of the mating

GILSEY HOUSE

E. O. ROESSLE, Prop.

Heslach Farm, Albany, N. Y.

349tf

he speaks of and then find his devotion fruitless. Of course, breeders of laced varieties of poultry know how to produce distinct rich colors, and this is all that is required in Rouens. The wise experienced breeder would not attempt this with birds "lighter in breast than elsewhere," with a semblance of rings on the ducks' necks, white flights or secondaries, or "clouded ground color," as he states, and it is just as well for a decided assertion to be made to prevent recruits from going astray, and I do it in saying that stock from such birds bred on the plan suggested by Mr. Brackenbury for the next twenty years will not produce birds superior to those exhibited at the last New York show. Who is going to waste 20 years in such folly?

I quote: "When it comes to disqualified (white) feathers in wings that is a matter that I know little about. It is hereditary in some strains. I have seen strains in which this fault abounded. I consider myself fortunate in this respect, for thus far the strain I am breeding is quite free from this fault." I know something about it, for I once visited a breeder who had used imported drakes with native ducks and got light drakes and every duck had white wing feathers. I told him he started wrong, but as he did not want to discard his entire flock I mated his stock with some of mine and in one year the white feathers vanished, but, as I explained, the rich warm distinct color, with size, depth of keel, breadth of chest, and shape generally, cannot be changed as readily, and he now intends to discard his strain and start with stock from imported birds only.

It seems to me that Mr. Brackenbury is hardly as well qualified to guide others in Rouen breeding as he is in some other lines, yet he certainly displays a superficial knowledge, which may be deceptive, so I'll presume to even teach the authority. The "compact short thick head and neck and plump bodies" in the ducks, provided the plumage is dark and distinct, are right for producing winning drakes. Mated to low, long, distinct colored drakes, the kind he calls "rangy," if properly mated, will produce the best ducks. "The slender, graceful necks and heads rather snake like" sometimes come, representing quality, and as this is seldom accompanied by size it is not a desideratum.

What is said as to beauty of plumage I agree with. The Rouen is the fancier's duck as well as the choice of the epicure. EDWIN H. MORRIS.

Cresskill, N. J., May 2nd, 1901.

A LARGE CIRCULATION.

Editor American Fancier: My sales have been very good, a great many of them being made through your paper, which shows that you must have a large circulation. D. P. SHOVE.

Fall River, Mass., Nov. 27, 1900.

—When Miss Millie James reached the Manhattan Theatre recently she found a rather unusual present awaiting her at the box office. It was a tiny little wooden cage inside of which were two tinier live goslings. Around the neck of one of these was a piece of ribbon with a very pretty little ring attached to it, and attached to the neck of the other was a card on which was written: "Our mother was not a lady; she was an incubator."—N. Y. Sun.

Proper Judging.

Much has been written of late with reference to the proper methods of judging fowls. No one has any right to object to the opinion of others who prefer a method that they oppose. Each and every exhibitor has the right to prefer that method which best pleases his fancy, and all have the right to demand proper care and attention to their exhibit. There is no good reason why each specimen should not have due and proper consideration at the hands of the judge, and our experience of over thirty years in the show-room has satisfied us that almost every judge gives more consideration to his classes than is usually accredited to him.

The judge has by far more at stake than has any or all of the exhibitors, for he must maintain his own reputation as well as satisfy all concerned. One would think after reading some of the general comments made upon judging that in comparison judging it was usual to give a passing glance, a poke with a stick, and then pass to the next; but this is not the case. I feel warranted in saying that it is more than likely that more and closer attention is given the several specimens under comparison judging than is given under the other method.

My reasons for this opinion are as follows: When the score card is used the bird is looked at but once for general contour, then taken from the coop and gone over section by section for color. When this examination is finished the work is complete so far as this individual is concerned, while in comparison each specimen is usually well looked over many times for the proper consideration of shape. There is no question but that form has more consideration under comparison than it has under the card system; at the same time color has the most attention under the score card, as has under-color. Of what injury are hidden defects to the outward elegance of a show specimen? If it is real show finish we seek, why quibble about these hidden defects? If we are to decide the awards upon their qualities to reproduce better than they are themselves, then let that be the show-room requirement; if not, then let the elegance of form and finish be the rule.

When we take the score card and apply it to the very letter as to color demands, the selection for first Brown Leghorn male or Partridge Cochin male will be a specimen that will not produce an exhibition female of quality. The same is true of Silver Wyandottes and also of many other breeds. What is the use of talking about white or light under-color being injurious to a Silver Laced Wyandotte or to a Silver Sebright when it is proven beyond all controversy that the proper lacing cannot be produced upon the dark under-color the Standard calls for? This dark under-color may be perfection in the breeding yard, but why force it into the show-room to the injury of elegant finish?

The score card can be used to give a commercial value to thousands, yes, tens of thousands, of specimens that would otherwise go where they belong—into the pot. We hear many say if the score card were used we would have a record of the quality of our stock to sell it by. This is true, also, and should have, as it has, due consideration for those who hope to get rid of their poor quality for more than it is really worth, for when you say to your customer, "I will send you a bird that William Scorethemhigh grades at ninety-two points," you sell on William's reputation as a scorer, and that ends the whole matter; but if you must sell the specimen on his own real value the purchaser is more likely to get his due.

We have drifted entirely too much into a determination to care for the seller. The journals fill their pages full of pictures and praise for the fellow who carries the large advertisement, while six others, who between them use more space and have by far better stock, are seldom, if ever, mentioned. In too many instances the show reports only mention the winnings of the advertisers who patronize the journal. The thousands who pay their subscriptions to the journal do not seem to have any consideration beyond an attempt to force them to deal with those who advertise in the journal. No difference how good the stock of the non-advertiser may be, or how poor the stock of the one who advertises, the latter shall have all the praise, even if the subscriber is fooled.

The same condition exists with the score card, the use of which entirely too often gives a fictitious value to a specimen and is made use of as the means of selling to amateurs birds of but little value for more than they are worth. But because the advertiser gains the benefit it is all right. Now for these reasons we are opposed to the valuation by sections on paper as a certificate of merit of the whole display, for it is simply giving a fictitious value to poor quality to assist the owner to pass it off upon the unsuspecting for more than it is worth. We saw a Silver Laced Wyandotte female scored a short time since at ninety-three, while her real value as a standard bred fowl was simply what she was worth per pound to eat. If she should be sold on her value as represented by the card, the one who purchased her would not get anything of value. The method first adopted for comparison was formulated into a form to be used as below:

THE AMERICAN FANCIER'S
Judges' and Reporters' Comparison Card.

Variety..... Judge.....

Sex and Age..... .... At Exhibition held at.....

Date.....

Entry or Coop Number.	Typical Shape or Station.	Color of Plumage.	Comb, Wattles and Ear-lobes or Dubbing.	Size, Condition Legs and Toes, or Toe-feathering.	Rank or Award.	Remarks.

This kind of a record was taken by many of the most prominent judges. We ourselves used it at first, but for some time we have used a form of our own in large, hard classes. When the classes are small and easily handled, no record is taken other than the result as recorded on the judge's book.

We give below the forms of record we have used, and whether it is necessary to use it in a class or not, it illustrates our manner of handling all classes, large or small, that we are called to pass judgment upon:

MEMORANDUM RECORD OF CLASSES.

Name of Variety: Barred Rock. Class: Cockerel.

Coop No.	Breed Characteristic.	Shape and Size.	Head-Points.	Surface-Color.	Undercolor, Including Wings.	Legs and Toes.	Awards.
426	Good.	Good but under size.	Off on Comb and eye.	Rather Dark	Strong and even.	Good.	2
429	Perfection.	Both good.	Good.	Good.	Good.	Good.	1
430	Not Good.	Fair.	Good.	Good.	Good.	Good.	3

The above will illustrate the care given to each class when the competition is close. It is our purpose to find the best in every case. For this reason we first go over the whole class for what we call breed characteristics. A specimen that is not true to breed form has but little consideration at our hands. As, for instance, when first I look them over color has no consideration if a specimen is marked off as not belonging to the breed on account of failing to conform to our notion of proper breed characteristics; this specimen may be most beautiful in color, but it will not have any consideration at our hands. The reason for this is that in most breeds shape counts about sixty-five points, while color stands for thirty-five points. The most beautiful color on earth may be upon a Langshan-shaped fowl that is shown in the Black Cochin class, but the shape throws it out of consideration. Beautiful buff may be present with a Brahma-shaped fowl, but such cannot win with me in the Cochin classes. Beautiful color will always win if backed up by good shape, but poor shape cannot win under any conditions, providing there is one of good form present that has even fairly good color.

If called upon to judge a class of White Leghorns we first look for the very best Leghorn type; after that we consider the color, at the same time keeping in sight the fact that shape counts two all the time as against color's one. When you see a Cochin that is Brahma in shape score ninety-three points because it has beautiful color, it is truly a lesson to the amateur that tells him shape don't count; neither does full, long plumage amount to anything just so you have the color. Thousands of times we have said shape makes the bird, color is only the variety distinction.

Now, do not for one moment draw the conclusion that we favor poor color, for such is not the case. We are just as particular about good color as we are about shape, but we make this distinction—to be a Plymouth Rock it must have Plymouth Rock shape. The most beautiful buff fowl in the world is not a Buff Rock if it has Leghorn shape, and when the false shape is present if the Leghorn-shaped fowl is scored and given a score card value, it is simply foisting upon the public an ill-shaped buff fowl for a Buff Rock, for there is no possible method or calculation that can discount a specimen of this kind less than twenty-five points for shape, for if Leghorn in shape it is not Plymouth Rock in shape at all and should be cut all that represents the breed form.

The above is our reason for objecting to these slight discounts by section for poor shape, when the proper shape demanded for the breed is not present. If a Cochin is not Cochin in shape, then it has no value; if the Leghorn is not Leghorn in shape, it is not a Leghorn: if the Hamburg or Houdan has not the proper shape, they do not belong to the breed whose name they bear when considered as show fowls. They may be anything you choose to call them as market poultry, but don't try to foist them upon an unsuspecting public as show specimens under methods that simply lead astray those who purchase them.—T. F. McGrew in the Feather.

PIGEONS.

Lofty Thoughts of the Editor

In a letter recently received the writer says: "I have now in the nest a very dark Red bred from a Black cock and Red hen." This seems strange to me, as I have always read: "Cock governs color and the hen conformation." Now this opens up quite a field for a little talk on what some (like the writer referred to) may think a violation of well regulated rules in breeding for color. To begin with, while the natural tendency is for the cock to exert considerable influence on color of young, it's not by any means an infallible rule. Suppose you are breeding from a Black cock and he was bred from a Red hen and a Black cock, making the cock one-half Red, and a hen mated to him is a Red bred Red, making the Red in the pair predominate 3 to 1, you would not get very many Blacks from such a mating, nor could one expect very many. Now, if the hen was bred from Black on one side a majority of the young would be dark colored, and in saying dark colored I mean Kites as well as Blacks. This color breeding is a deep study in itself, and for one to lay down hard and fast rules as how to produce this or that color is utter nonsense. Take Blacks, for instance, and breed them straight for four or five generations and you will now and again breed a Red and, as a rule, it will not be fit for anything but killing, so far as color is concerned. To one who has not had considerable experience the crossing of colors is a plan that is best left for those who have mastered the elementaries of pigeon breeding. Not that it is my wish to discourage experimental work in that line, for that is one of the greatest pleasures in breeding, but I do think it unwise for a young and inexperienced pigeon fancier to pay a good price for a pigeon of quality of one color and then get a mate, of perhaps equally good quality but of a different color, and bank his future pleasures on what this, that, or the other pigeon writer may have said they will produce. I have in mind a pigeon of a neutral color that if paired to any one of three colors will produce a majority of that color. Yet this pigeon is a cock, so that he most certainly does not have much to say as to color of his offspring. Such a pigeon, if of good type of body, with good head, eye and beak and of the approved style, is invaluable to one who knows how to use him. The color I refer to is what is called a Strawberry, and if mated to Yellow will breed Yellows, or to Red you can expect Reds, and if to Black you can get a majority of Blacks. For the latter color the proper Strawberry should show a little black ticking, which will insure a larger percentage of Blacks. Many think the production of Blacks has been brought about by a strong infusion of Red blood, and while it may have been introduced many years ago, I do not believe the highest colors have been crossed with Red in recent years, for by such a cross, unless the Red used is a green hackled bird, and even with this bird some will come with the objectionable copper hackle, and in establishing a strain of Blacks if there is one little fault that will prove annoying to eradicate it is a copper hackle on a Black bird. Now, in Yellow breeding the Red is the proper bird to keep up the color, for no matter how good a strain of Yellows a man may build he will come to a period some time in his breeding that he needs Reds, for Yellows have a natural tendency to breed mealy and are hard to keep of that bright, warm, lively coloring so much admired but seldom met with. There is more real beauty in a bird of this shade, with the faintest tinge of pinkiness in hackle, than all the deep, dark Yellows combined. Now, I do not object so much to the deep yellow as to the lack of lustre that comes with

such a shade, for I have yet to see one of these very dark yellows that ever had any of this warmth and lustrous depth of color the medium dark bird has, they most all are cold and dead in color with nothing but a close margin to distinguish them from what in old times I have heard called cinnamon red, which is a pale red as compared to the deep chestnut red of the present approved exhibition specimen. Now in producing the yellow I am particularly fond of the easiest and quickest way to get a yellow as bright and even in color as possible, and when I say even I mean to be very careful and breed from one that the color of flights is as near the same shade of body as possible, flights and tail generally failing slightly in the best specimens of this color. To such a cock or hen, if cock cannot be procured, breed the best colored Red you are able to procure. You may breed half-a-dozen young and five of them will be Reds of poorer color than the parent Red, but they are all birds of value for yellow breeding and of little use for any other. Perhaps your sixth bird is a Yellow, and if so, you will notice nine times in ten is an improvement over the present yellow. Now with this Yellow and the young Reds you have the start for a strain of Yellows, and by mating the Yellow back to the parent Yellow, you will breed Yellows till doomsday, with a Red only now and again. It is the same with the young Reds but the per centage will not be so great. By adding a Yellow now and again as occasion may require, you can gradually build the strain. Now and again a Yellow bred Red will come, but as a rule it is not of much account for color, but is invaluable to put back to Yellow to hold the color.

—

Mr. Henry Tiemann has bought the whole of the St. Louis winning Barbs, as well as all of Mr. Verge's Pigmies, and, if the purchase of the former is only the means of helping on the Barb fancy, it will be helping on one of the oldest and grandest breeds that has ever been produced. The trouble with fanciers here seems to be the national characteristic of impatience. The Barb is not at his best until three years old, and that seems to be too long for the ordinary American to wait, he wants to start, breed winners and be selling champions in that time, and while the hustle is commendable, still when you can't, you can't, and it's tough on one of the grandest of pigeons—the Barb. Henry says they are very good, and that he is going to breed them. As to the Pigmies, he writes that they are a grand lot of birds and that he is thinking of joining the Pigmy Club and giving the boys a hustle at the Pan-American. There are few fanciers in America who have done or are willing to do more for the pigeon fancy than Mr. Tieman, and the fanciers he has made and helped, and the advice gratuitously given, has given him a warm place among pigeon fanciers that he is deserving of. May he live long and turn up at the great event to be held in the western part of New York state in the latter part of October, 1901.

—

Mr. A. D. Robinson of St. Louis has just purchased all of George Stanfield's Owls, who was one of the oldest breeders of this variety on the other side. Now when this team and George Ewald's cracks representing the west, with Robert Oliphant and George Eckert toeing the mark for the East, won't the fur fly?

—

K. J. Muir, superintendent of the pigeon department of the Chicago show is still unable to get about. We assure Mr. Muir that those who know him, and many who have received kind and considerate impressions of him through attention given exhibits under his charge wish him a speedy recovery.

—

Mr. Fred. Weiss, the tall "sycamore of the Wabash" is going for old Jack's scalp at the Pan-American and is laying the wins now in Evansville, Indiana, in the form of a few choice young Fans.

F. W. GORSE.

Highlandville, Mass.

—Subscribe for the American Fancier

Homing Pigeons From New York and Vicinity.

I wish to call the attention of all fanciers of Homing pigeons to the great fly from the Pan-American on May 20th. All birds are eligible. Those without bands will be furnished with a regular number. Birds must be at my place, 56 Dey Street, New York City, on Saturday, May 18th, not later than 9 a. m, for countermarking and shipping. Diplomas will be issued to the first three birds.

W. J. STANTON.

56 Dey Street, New York City.

PET STOCK.

Keeping the Pedigrees of Belgian Hares.

In order to keep the record of pedigrees of Belgian Hares certain things are requisite.

1st. It is essential that the hares be kept in separate enclosures or hutches. As, for this purpose, hutches are the most convenient, it is advisable to keep the hares in hutches. The hutches should either be numbered or have upon them the name of the animals confined therein. The best method is to have both the names and the numbers.

2nd. A record book of matings and births should be kept. This book should have the names and numbers of the does to correspond with those upon the hutches. The book need not be an elaborate affair, but it should contain all necessary information. The following suggestions of what it should contain and how it will look when partially filled out are hereby made. A glance at the following specimen page will be all the explanation necessary:

DOE, MAID OF THE MIST, No. 7.

Maid of the Mist, Born Aug. 1, 1899 { Niagara { Buffalo Bill / Minnehaha ; Will-o-Wisp { Moonstone / Marsh Mallow

Bred.	Buck.	Date of Birth.	Litter.	Marks.
Sept. 1, 1900	Gen. Lee	Sept. 29, 1900	7-4 does	One hole right ear.
Nov. 2, 1900	Lord Rubifoam	Decem. 1. 1900	8-5 does	One hole left ear.

3rd. A book containing a scheme of markings. This will be made up from the mating book, very much as a ledger is made up from the day book. While it is not absolutely indispensable, it will be found extremely convenient and will show at a glance what marks have been appropriated and will thus prevent the duplication of marks and the confusion incident thereto. If accurate pedigrees are to be kept it is my essential that the method of marking the young should be carefully recorded and that there should be no duplication of marks.

4th. Marking the young will be found to be an easy matter when but few does and a single stud buck are kept, but a very complicated matter where many does and several bucks are used. For the small rabbitry nothing, it seems to me, will be better than the use of a punch. For one mating the ears will be left intact, for a second the right ear will have one hole, for a third the left ear will have one hole, and so on. Eight separate markings can be made by the use of two holes in one or both ears. But when a large rabbitry is kept some other system of marking should be devised, and the following will perhaps be found useful. The does and bucks all being numbered, the marking can be done by tattooing in India ink the numbers on the inside of the ear, placing that of the buck first. For example, if buck No. 7 is sire and doe No. 15 is dam, the marking would be 7–15. To this the date also could be added, so that the ear would give a full record. Suppose doe No. 15 produced a litter on July 1st, 1901, from buck No. 7, the record would be 7–15, 7–1–01. Tags such as are used upon sheep could also be employed, the only trouble being the liability of the tags getting loose and the record thus becoming lost. Still another method might be employed to keep the date of the births. If large runs were used for the young, all those born in the same month could be transferred to them. The runs could be numbered from 1 to 12, if young were bred the year round, the number of the run corresponding to the month—thus No. 1 would be for hares born in January, No. 2 for those born in February, and so on through the calendar. This would not keep the day of the month, but that is not so very important after the young get to be five or six months old. And even this could be ascertained if the records of mating and births had been properly kept in the record book.

5th. A pedigree book should be kept. This ought to contain a blank pedigree, with stub end showing the sale of the animal and data enough to enable the breeder to reproduce the pedigree at any time. Pedigrees are liable to get lost, and it is a matter of convenience and satisfaction to one's customers to be able to send them a duplicate pedigree if desired. Then, too, some shrewd buyer might pretend to have lost the pedigree of his purchase and send for a second one, for the sole purpose of comparing the two to see if they corresponded. Such a case the writer has heard of, where a purchaser of a pedigreed cockerel sent for a second pedigree and found that the two pedigrees were entirely different. That purchaser lost faith in poultry pedigrees at once. If a breeder of Belgian Hares was so unfortunate as to issue two entirely different pedigrees for the same animal, his reputation for accuracy, if not for veracity, would suffer at least a passing suspicion.

To keep pedigrees is some trouble, but not so much as it appears to be when the process is detailed. It is easier to do the work than to tell how it should be done. But if really scientific breeding is to be practiced pedigrees must be kept. Good results, excellent results, may be obtainable without records, but records simplify the problems of breeding by furnishing the data needed for making matings that will give a high degree of probability of success. So whether the labor of keeping pedigrees is little or much, it is necessary labor which the breeder cannot afford to shirk.

H. S. BABCOCK.

A Dispassionate View of Belgian Hares.

Editor of the American Fancier:—So much that is exaggeration has been said and written about the Belgian Hare that a few calm statements are necessary now and then. It has been thought that anything, no matter how grey or coarse if it were only a Belgian Hare with a list of ancestors, would be as good an investment as a Texas oil well. Men have embarked in the industry expecting from a trio of hares to clear off a mortgage, giving them little care and indifferent quarters; women have invested a few dollars with bright visions of silk dresses, sealskin cloaks, and a trip to Europe before them, knowing nothing about the animals except that some specimens are worth several hundred dollars. No under these hopes and in these circumstances, and yet the same principles prevail in Belgian Hare culture as in raising any fancy stock. It is the careful student of his animals and their environment that wins success, prizes, and good returns. One advertisement says: "Enormous profits in Belgian Hares;" another, "A minister's wife last year made so many thousand dollars by a few hares," and the dealer's address follows. The result too often is disappointment.

There is this to be said in unvarnished truth. The Belgian Hare will give more returns for the money laid out upon him than any animal, bird or beast that we have, and the better the care and attention the greater the returns. A breeder often must create a demand for his surplus hares, his bucks and poorly marked does, by giving one dressed to a hotel, restaurant, or family that is known to indulge in rare-bits. Then the price is gladly paid, 28 to 30 cents a pound, and in large lots, 20 cents. Here is where the sure and steady returns appear in the hare industry. The finest stock may yield a fancy prize winner, but this jewel will be one of many indifferent animals. These can be killed when young or allowed to grow and yield an income in market stock. Often in new fields pedigrees and sudden interest create demand and good prices, but this will not always endure, so it is well to keep raising the quality of the stock as rapidly as sales come in, not expecting a stream of unvarying net profit from the first inconsiderable investment. The breeders and fanciers who are making money largely are those who have invested large amounts and have spent days and nights studying their animals and their business the same as any dry goods man or grocer does upon the street in his chosen line.

Last year the writer spent a large part of the summer in England and Belgium, the greater part of the time in the latter country, to find the real home of the hare and the original strain, if it existed. The hares of Belgium were seen to be the market and the fancy strains, the same as here, but in that country all are called "rabbits." The Red Giant hare, which he discovered in the interior of the country and has introduced here, should be called the "original Belgian Hare," if any variety deserves that name. Other breeders and fanciers in large numbers visited England and studied the stock there, the methods in use, and the system of scoring. All these steps in developing the Belgian Hare business are ignored in the florid advertisements and overcharged statements in which only the returns are mentioned and nothing said of the debit side of the account. In fine, if any one invests a reasonable amount in these animals, as much as he would in any fancy stock, say from $20 to $50, the income, depending upon the care given, will be greater than that from poultry, if the animals are kept only for the breeder's own table. If he got back only half his investment in a year the returns would

BUSY AS BEAVERS are the Silver Wyandottes

ON BEAVER HILL FARM { T.E. ORR, Prop'r / W.D.Poole, Sup't

BEAVER, PA.

They have been doing business at the leading shows: four prizes at Indianapolis, three at Hagerstown, four at Philadelphia, four at New York, three at Chicago and nine at Pittsburgh. First hen at New York and First Cock at Chicago shows that Beaver Hill Farm is able to go in good company.

OUR BREEDING PENS FOR 1901 CONTAIN SIX FAMOUS PRIZE-WINNING COCKS,

Five not less famous prize-winning Cockerels, and more high-scoring and prize-winning females than those of any other breeder of Silvers in America.

BEST OF ALL, OUR BIRDS ARE BRED TO LAY EGGS

Twenty years line bred since they left the hands of the originator of Wyandottes, L. Whittaker. *Yearly records of over 200 eggs per hen.*

be greater than the usual rate of interest anywhere given. By turning this into still better stock the income is sure to increase in greater degree.

This is a very tame and prosaic statement to make of Belgian Hares, but it shows what can be said without exaggeration and how they may be viewed without a future disappointment. But, mark you, all this is not saying that large returns in many cases are not possible, but they are the result of hard and studious work.

HENS WILL SIT
and do their level best when given the right kind of a nest, the right number of eggs, the right kind of food, the right kind of care and dusted with the right kind of insect powder. For this latter purpose Lambert's Death to Lice fills all of the requirements.

EGGS WILL HATCH
when the breeders are kept free from lice, and when they have daily out door or scratching shed exercise. Under these conditions eggs from healthy birds are usually well fertilized. When good eggs fail to hatch the trouble is often outside of the eggs. Lambert's Death to Lice Powder never injures the fertility of eggs for hatching, the sitter or the little chickens should they hatch in a handful of it.

CHICKS WILL GROW
when started free from vermin and kept so from the shell up. If allowed to become lousy they lose strength and vitality, which will stunt them in growth or cause an early demise. More chickens die every year from this cause than any other, while a little Death to Lice Ointment would save their lives. 73-24

DEATH TO LICE REMEDIES:
Death to Lice Powder for dusting layers and sitters—5 oz. sample, 10c postpaid; 48 oz , 50; 100 oz., $1.00, from here or nearest agency to you by express. Death to Lice Ointment for head lice on children or chickens also scaly shanks on fowls, 10c and 25c postpaid. Death to Lice Special, for making a liquid louse or mite killer and for mixing with the regular powder for fleas on dogs, moths, etc., 4 oz., 10c; 16 oz., 40c by mail postpaid. Death to Lice Liquid for spraying poultry houses, painting roosts, etc., (already prepared) 1 qt., 35c; 2 qts., 60c; 4 qts., $1.00, f. o. b. here. Book and "How Best to Set a Hen" sent free. **D. J. LAMBERT, Box 248, Apponaug, R. I.**

First Prize Pen at New York.

"RINGLETS" SOAR STILL HIGHER.

AT THE IMPERIAL SHOW OF THE NATION— MADISON SQUARE GARDEN, N, Y., THE WORLD'S RECORD OF

E. B. THOMPSON'S BARRED PLYMOUTH ROCKS

4 YEARS IN SUCCESSION was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ever accomplished in the annals of the **New York Show; Winning** during **4 years in succession MORE THAN THREE TIMES AS MANY 1ST PRIZES** as any other exhibitor, and as many **1ST PRIZES AS ALL COMPETITORS COMBINED,** besides more **than twice as many Cups** and **Specials** as all, including the **superb challenge Trophy,** value **$100,** for best cock, cockerel, hen, pullet and exhibition pen; **$100 Sterling Silver Cup** for finest exhibit, **Grand Special Prize Sweepstakes Cup** value **$100** presented by the **President** for best P. Rock cock, cockerel, hen and pullet, any variety. My clean sweep of

FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES

on pullets has never been approached in Madison Square Garden, and stands alone and unequaled.

The world's record of 1st on exhibition pen at New York 3 years in succession is the undisputed Champion. With their 1900 record the **"RINGLETS"** have won at New York a grand total of **77 PRIZES. 31** of these prizes are 1st and specials, being 17 more 1st and special prizes than won by any competitor in the history of the show. Rare bargains in yearling breeders in lots of a trio or 100. Show bird fit to win in the fastest company. Richly illustrated 24-page catalogue on application. Elegant breeders in any number. Eggs from finest exhibition matings, 1 sitting, $5; 2 sittings, $9; 3 sittings, $12; 4 sittings, $15. ADDRESS 91-tf

E. B. THOMPSON, Amenia, Dutchess County, New York.

MUFFED TUMBLERS FOR SALE.

WINNERS IN ENGLAND AND AMERICA.

The grandest collection of winning Muffed Tumblers ever gotten together is now on sale, and can be seen by appointment and birds selected. I will sell any Muffed Tumbler I own and arrangements can be made to take the entire lot. The varieties are Blue Saddles, Black Badges, Black Mottles (Yellow Rose cock, 1st Boston and Chicago, price $15, one of the best living) and several other odd birds, all winners or will produce winners. My Tumblers possess characteristics peculiarly their own, having been bred carefully for years, and are streets ahead of any other strain. In the past five years I have bred more winners than all others combined. Stock birds sold to others have bred their best birds; why, then, waste time and money by breeding from ordinary stock, when for an ordinary outlay the best birds living can be obtained? Those who would like to win and breed winners are invited to correspond. Prices very low, but nothing in muff legs under $5 per bird. (Some as low as $2.50 in surplus Clean Legs.) Testimonials from dozens who have purchased winners in all parts of the country. Satisfaction guaranteed. State wants fully. See winnings at Birmingham, Eng. (1st and medal), Boston, Chicago and New York. While winning here I had a team of six winning at Birmingham, Eng., the greatest Tumbler show in the world, irresistible argument as to the quality of my stock. 48tf

F. W. GORSE, Box 228, Highlandville, Mass.

S. C BROWN LEGHORNS..

My birds are equal to the best. Have won more prizes on a given number of entries than any Leghorn breeder. Circular, free, will prove this. At Boston this year, 3 entries, 2 1sts, 1 3d; at Erie, 1900, 1st pen, 1st cock, 2d hen, 1st c'k'l, 1st, 2d, 3d, 4th pul, $5 spec. 10 highest scoring Leghorns, special best trio, silver cup best ck, ckl, hen, pul, a showing of 121 Browns. Eggs, $2 for 15. 93-tf L. O. BROMLEY, SILVER CREEK, NEW YORK.

One of the rarest of the Rare Deposits yet found in the bowels of the Earth.

DIAMOND FLINT. Nature's blending of Grit, Lime and Phosphoric Acid, not to be excelled for Digestion of Food in Fowls and the creation of egg shells, adding vigor to the strongest of your flock.

Scientists claim this deposit to have been formed more than 5,000 years ago, and it is recognized by them and the natives, who have been using it for more than 100 years for their Poultry, as one of the most valuable products of the earth yet discovered for any and all kinds of fowls—Second in Hardness to Diamonds Only, hence the name "DIAMOND FLINT," 'tho formed of a hetercgeneous mass of shell-fish and shells from which a milky substance flows when first exposed to the air. Does away with all need of oyster shells. Instead of buying a ton of oyster shells and a ton of ordinary poultry grit, order a ton of DIAMOND FLINT and you have all the properties to be obtained in both the others, and many other beneficial qualities not contained in either, at a great saving of time, labor and money.

20 LB. BAGS, $0 50 — 500 LB. LOTS, $0 85 PER 100 LBS.
50 " " 75 — 1000 " " 75 " " "
100 " " 1 00 — TON " 60 " " "

DIAMOND FLINT CO., SOLE OWNERS, GRINDERS AND INTRODUCERS, Box E, So. Amboy, N. J.

Now Is the Time you want Eggs

By feeding your fowls a little

BANNER EGG FOOD AND TONIC

your hens will lay lots of eggs, and you can double your profits, as this is the season of the year when fresh laid eggs are scarce.

REMEMBER, this TONIC does not force your hens to lay; it only brings them up to the pink of condition which is necessary for egg production.

TO THOSE who have never used it, we simply ask you to give it a trial, and be convinced.

PRICES: 1 lb. can, 25cts, by mail, 40 cts; 5 cans $1 on board Ex. at New York. 78-tf

WHAT SAVED JUDGE CLARK'S CHICKENS.

Scotch Plains, N. J., Sept. 13, 1900—Judge Clark, when not dispensing law and dealing out justice, devotes a great deal of his time to raising chickens and ducks. About two weeks ago his fowls were attacked with a disease which began carrying them off at an alarming rate, notwithstanding all his efforts to check the epidemic. Several authorities on chickens were consulted and it was agreed that the fowls were suffering from some form of cholera. A remedy was at last found to check the disease. This was procured from the Star Incubator Co., of Bound Brook, and it proved to be just the thing, and the Judge is once more happy and will begin at once to replenish his stock.

From Plainfield (N. J.,) Daily Press. September 13th, 1900.

Manufactured only by STAR INCUBATOR COMPANY, BOUND BROOK, N. J., AND 38 VESEY ST., N. Y. CITY.

Champions at Pittsburg, 1901....

BUCKEYE CHIEF.

In a class of 162 we won 1st and 4th on cocks; 2nd cockerel, (losing 1st on condition, easily best male in class); 2nd and 3rd hens; 3rd and 4th pullets; 2nd breeding pen and our 1st cock and 2d cockerel were the talk of the show.

AT CANTON we have been holding the reins for years. 1898. Bridge, judge, 1st cock; 1st cockerel; 1st and 2d hen; 1st and 2d pullet. At Canton, Jarvis judge, 1st cock; 1st hen; 1st and 2d pullet; 3d cockerel; 1st pen. Canton, 1900, Lambert judge, 1st ck; 1st cockerel by error of 3½ points in weight; 3d pul; 4th and best of all, 1st breeding pen Canton, 1 01, Myers judge, 1st cock, 92½ 3rd cock, 92; 1st cockerel, 94; 3rd cockerel, 92¾ and A CLEAN SWEEP OF 1st, 2d and 3rd PULLETS, 94¼, 9[illegible]½, 93¼; 3rd hen, 92½; 1st breeding pen 187.

Besides this I have sold the winners for many shows this season.

EGGS I sold last year produced winners! Why not book you for a few settings and for once in your life have Barred Rocks of standard shape and color? Don't hesitate, but send stamp to-day for my illustrated catalogue explaining all.

The Belgian Hare Guide

This book is acknowledged to be the finest and most reliable book out on the Belgian hare industry. It contains complete and practical information on the following and many other subjects pertaining to the industry: History and Origin, The Belgian for Utility, The Belgian for Fancy, The Business and its Outlook, How to Begin, Houses and Hutches, Foods and Feeding, Feeding Green Stuff, Mating and Breeding, Care of the Young Pedigrees, Score Cards and Judging, Belgian Hare Color, Dressing and Cooking, Diseases and Remedies, Preparing for Exhibition, Crating and Shipping, Caponizing, Queries and Answers Miscellany, Belgian Hares vs. Poultry, The Belgian in England, The Belgian in California, Black Belgians and Flemish Giants. It is elegantly printed on fine paper, illustrated with numerous beautiful photo engravings, and is substantially bound. No one interested in Belgians can afford to be without it. Send your order today. **Price, 25 cents**

COLUMBIAN WYANDOTTES

Have 'U' Seen Them?

This new variety has all the characteristics of the Wyandotte. clear yellow legs, rose comb, standard weight and correct shape.

They are white with the markings of the Lt. Brahma and rival their sister varieties in laying qualities. We have for sale some excellent breeders in pairs, trios and pens. Send stamp for our large illustrated catalogue. 98-tf

THE OTSELIC EGG BOXES.....

I make the neatest, cheapest and best Egg Box on the market to-day, for shipping eggs for hatching. Over 10,000 settings were shipped in my boxes last year, and not one bad report. If packed according to directions which go with each box, there is no possible chance for eggs to get jarred or broken. My boxes are made of dressed pine with slide cover fastened with screws, handle on cover and pasteboard fillers on inside, made large enough to allow plenty of packing around each egg.

MY PRICES FOR 1901 ARE:

	PER DOZ.	PER 100

TYPOGRAPHICAL UNION LABEL FULTON COUNTY No. 765

SATURDAY MAY 18 1901

From the Editor's Perch.

The Southern Inter-State Fair will be held at Atlanta, Ga., October 9 to 26. The poultry show in connection with the above is scheduled for October 14 to 19. It is almost needless to say that this is the great fall fair and exhibition in the Sunny South. Atlanta is a great metropolis, a handsome city, and the magnificent fair grounds are well known to exhibitors of live stock throughout the United States. The preliminary announcements are nicely conveyed in a beautifully printed catalogue, which can be obtained from Mr. T. H. Martin, Secretary, Atlanta, Ga.

***

The great defect of comparison judging is that it is not Standard judging. It ignores under-color altogether, according to Bro. McGrew's exposition of it, and therefore is not judging at all according to the requirements of the Standard. If the Standard is wrong and under-color cuts no figure, let us change the Standard and cut out all reference to under-color. If under-color is of some importance, then let us consider it instead of having our fowls judged by being poked around by a stick in the hands of a judge who does not look beneath the surface. We are glad this subject has attracted attention enough to have been discussed in the columns of the poultry press, and shall be satisfied to have the matter settled, but we hope it will not be settled by decreeing that under-color—which is important, no matter how much we may ignore it in the shows—is not worth considering.—Commerc'l Poultry.

Comparison does not ignore under-color and it is just as much Standard judging as the score card is. It all depends on who judges. A poor judge will make a mess at comparison judging and frequently skip through score card judging with impunity, provided he gets the scores high enough.

***

One bright writer and fancier in a western paper put the blame for the high score nuisance and humbug where it belongs, viz., on the judge. He justly exonerates himself when he states that he advertises the scores given his birds by the judge, although he does not believe in them. It's a nice way out of a ticklish position, and it is so easy to fall back on somebody else. But it continues to disseminate stock at fictitious valuation, and that is fraud pure and simple. It kills the trade of honest fanciers that decline to place a mythical or inflated score on the birds they offer for sale.

***

In handling birds where under-color is of great importance—buff varieties, for instance—a good comparison judge will work harder in such a class and feel much more tired than if he had simply scored the birds. It is an utter impossibility to pass judgment on buff fowls where two or more specimens are very close in color unless they are compared section by section, other things such as shape, condition and comb being nearly equal. Besides, it takes very good eyesight and the same light for all the birds to find the correct shade of golden buff. We have handled a great many buff birds in the past ten years and are fully convinced of the correctness of the above statements.

***

The Akron (O.) Democrat of May 11 says:

"A novel plan for enlisting popular interest in Kenmore has just been adopted. Mr. Samuel J. Hibbs, of Dean street, Akron, the well known breeder of fine Homing pigeons, has arranged with the Akron Realty Co., the promoters of Kenmore, for ten homing contests, in which the prizes will amount to $3,000 in each contest, or $30,000 in all. Kenmore is a new town connecting Akron and Barberton. To each purchaser of a lot will be sold a fine Homing pigeon, and when one hundred lots have been paid for a 'fly' will be held, in which 100 birds will take part. The owner of the winning bird will be given a home worth $3,000. When the second hundred lots are paid for another contest will take place, until one thousand lots have been sold and ten fine homes awarded to the owners of the winning birds. This is the greatest sum ever given for a homing contest, and it is attracting the attention of fanciers all over the country."

It looks as if Homing pigeons are going to enjoy a very large sized boom this season. The above certainly is a new and "catchy" method of advertising both property and birds.

***

The pigeon flying races at the Pan-American are certainly attracting widespread attention and many new Homing fanciers are being created. A letter from Pittsburg, Pa., informs us that the Pittsburg Fanciers' Club will give a fine silver cup for a race to be held the week of the poultry show at the Pan. George H. Burgott is to manage the race. The latter is open to Homing fanciers residing in Allegheny county.

***

Mr. Harry Lamon, Watertown, N. Y. writes that after June 1 he will sell his choice breeders in Buff Leghorns, including his New York and Johnstown winners. This is a rare chance to secure the very best breeding stock, and June is not too late to set Leghorn eggs.

***

The North Carolina Poultry Association was organized at Charlotte January 16. A great show will be held at High Point, N. C., January 14 to 17. A large membership, a fine list of officers, and an experienced secretary, R. L. Simmons, will make the Tar-Heel State right in line with the best of poultry exhibitions.

***

Mr. George G. Brown, East Cleveland, Ohio, writes:

"It may be of interest to you to know that the Cleveland Poultry Association has been merged into a stock company, capitalized at $5,000. The stock is all sold with the exception of four or five shares, and is subscribed for almost exclusively by responsible business men. John Zipp, of the Zipp Mfg. Co., has been elected president; Geo. E. Conkey, vice president; F. R. Hunt, secretary, and myself treasurer. Under the laws of Ohio the stockholders are liable for double the amount subscribed, which really makes our corporation a $10,000 company. We propose to get up an up-to-date show in December."

The Cleveland show last season was conceded to be one of the handsomest exhibitions in the country, and the coming show will be second to none in equipment and management. The officers are all responsible business men and first class fanciers.

***

Mr. George H. Northup has been selected to judge Black Minorcas at the American Minorca Club meeting to be held at the Philadelphia show next December.

***

Owing to continued poor health, Mr. M. S. Gardner, Philadelphia, New York, has decided to dispose of the greater part of his Barred Plymouth Rocks, including many of his New York and Johnstown winners. All these birds are bred from a first winner at New York or can be traced directly to one. Mr. Gardner writes: "I am very sorry to be obliged to let these birds go, but my health will not permit me to attend to them at present, so have decided to part with them."

Buff Leghorns As Layers.

Early in the nineties I suffered from my first severe attack of chicken fever, and though I have taken repeated treatments for the same, the disease seems to grow and become more firmly fixed as the years go by, until my physician (my wife) has given up in despair and pronounces my case incurable. My first symptoms were a sudden fancy for the Buff Cochin, followed almost immediately by a determination to possess some of my own; to that end I purchased a setting of eggs, paying the owner an exorbitant price, so it seemed to me, though if I remember rightly it was but 75 cents. In due time I was the proud (?) possessor of five sturdy chicks, four buff and one white; though why one should have been white I am to this day at a loss to know, and why there should have been "no feathers on the side of his legs in the place where the feathers ought to grow." However, with this as a start, I bred Buff Cochins for a number of years, purchasing eggs from some of the best strains in the country, and were I to-day in the poultry business for simon pure exhibition birds, I should still be breeding Buff Cochins. They were my first love and I shall always take a deep interest in this grand breed; but though I had become a confirmed chicken crank in every sense of the word, I wanted something besides feathers, and that something was eggs, which I failed to get in any amount from my Cochins.

About this time I began to notice accounts of the wonderful laying powers of the Buff Leghorns, and being fully decided that nothing but buff would ever satisfy my fancy, I determined to try the Buff Leghorns; and so thoroughly satisfactory did they prove, that I am to-day as enthusiastic over my Leghorns as ever I was with the Cochins.

The Buff Leghorn to-day sets the pace for the world in buff color; nothing can exceed the beauty of the soft lustrous buff of the female, and the more brilliant metallic buff of the male. Their bright red combs and pure white lobes bring out the rich golden buff of their plumage to the best advantage. Where can you see a more pleasing sight than a flock of these graceful fowls on a green lawn, the bright green making a most artistic background?

As for their practical qualities, they are most persistent layers of large, white eggs and are the finest of table fowls. They are hardy, quick growers, and will thrive and grow fat on one-half the feed the larger breed consume.

Now a word for the Buff Leghorn Club. It is a well-known fact that the specialty clubs of the various breeds are doing much to push to the front and popularize their several breeds, but in order to do this they must have the support and co operation of the breeders. For some time past but little has been heard from the Buff Leghorn Club. But with its new officers we predict that this year it will show new life and energy, and we hope every breeder of Buff Leghorns will join the same.

GEORGE F. CURTIS.

Fenton, Michigan.

How I Became a Fancier and Why I Remain One.

It was ten years ago that I took my bride to the home I had bought a year before, which consisted of a neat cottage and two acres of land. Among our wedding presents was a trio of Black Langshans. A few weeks later I bought six more hens, four of which were like the trio. I built a 2x4 coop and let them take care of themselves; no attention was given them, except to give them water and scraps from the table, and once in a while some grain.

As time went by, two hens were missing, and imagine my surprise when early one morning one hen came up with nine plump black and white chicks. My wife insisted on having a nice coop and pen made for biddy, which was done, and three days later hen number two came up with fifteen more chicks, all alike; for a while those little fellows got a fine bill of fare and grew like weeds.

In the early fall of that year, while sitting on the porch one Sunday eve, the sun being nearly down, ten or twelve of the pullets and two cockerels were feeding on the grass in the yard. While watching them I fell in love with their beauty, and who wouldn't? Imagine, if you will, a nice flock of pure breds in one bunch, with the bright sunlight as a back ground on a large green plat, affording all the beauty and loveliness mortal eyes could wish to see.

I decided then and there to become a fancier, any old thing that had the picture of a chicken in it found a place in my pocket till I had time to read and look at it. I subscribed for a poultry paper, built my little flock a nice, warm house, and saw that their food was sound and wholesome, also made a visit to a fancier of my acquaintance; he had several breeds and I noticed at once his Langshans didn't look as large and fine as my own.

I said you have too many different breeds; he said that there were good demands for them all, but it required hard work to attend to them, and wanted to dispose of one breed, which was the Buff Cochin. I bought eight of them, and am glad I did, for that trade taught me a lesson I shall never forget.

Everything went along nicely; the following spring I set and hatched my broods, having about seventy of both kinds. Summer came, so did the lice, fleas and mites. I worked like a pump

gun, got rid of them in time to make room for cholera, and that soon got rid of my Cochins. I lost my entire bunch of forty head in two days; the Langshans, too, dwindled down to a dozen and a half.

I knew that to succeed a fellow has to learn, so began again, an oath to keep only one breed. The next year I fought varmints from the word go and kept at it; disease also was nipped in the bud, and that fall I was offered two dollars around for the entire bunch, providing I wouldn't raise any more of that variety. It took me nearly a week to reach a verdict, finally I decided to sell and try Buff Leghorns. Bought two settings of eggs and got four chicks three pullets and one cockerel. That fall we had a poultry show in our town I put in my four Buffs and won two prizes. My! how proud I was. I decided at once to get them in line. Wrote several fanciers for information, etc., and from what I received, with my own judgment, I have to-day a bunch of pure line bred fowls as good as it is possible to put in a show room.

Every chance I have I ask the judge for merits and defects and try to abide by his advice in keeping my birds to the Standard.

It isn't hard work to line breed, all you have to do is to be in love with your work, keep only one kind, study their habits, be kind and gentle to them, keep varmints off and your place clean; give them pure wholesome food and clean water, and above all things, keep only a few, study your Standard and don't take everybody's advice, use some of your own judgment occasionally, and if everything don't go right, hunt the faults yourself or ask some well known poultry judge; they are our friends.

Why I remain a fancier is easily told, and I ask you to go with me on an imaginary trip. First, we enter our breeding yards, females all one even shade of color, body and tail erect, comb bright red; the male lighter or darker, as the case may be, body and head erect, all showing health and vigor. Pen No. 2 the same, we admire their beauty, etc., then go to the house; the little fellows are more familiar with you than their parents. Here and there you notice some more erect and livelier than the rest, look similar to their sire in carriage and shape, little tails and combs erect; over yonder is a little fight, over there is another; we throw them some feed, how they scramble for it and beg for more.

Fall is here, how carefully we look over them all. Have made our selections now, got them in shape for the show room. Now they are gone.

For the next few days how eager we are for the city paper and our mail. Elections, murder cases, prize fights, etc., are passed over—the true fancier looks for the poultry awards first. Here is a letter or a card saying your birds won so and so. Now, don't you feel proud of your birds? Don't you resolve next year to make them go still higher? Don't you hurry home to tell your wife the news and incidentally every neighbor you come across and the editor of your home paper?

Not only do the fowls alone appeal to your human nature and cause you to remain a fancier, but the friendship of a brother fancier formed in a show room unites us by ties that are hard to sever, and cause us to look forward to the time when we can meet again, congratulate each other and exchange points that aid us to keep our minds and fowls pure for another year.—John A. Kinkead of Burnet, Texas, in Poultry and Belgian Hare Standard.

Golden Spangled Hamburgs.

Golden Spangled Hamburgs—or Golden Pheasants, as they used to be called universally, and often are still up in Lancashire and Yorkshire—are one of the most beautiful of all the varieties of Hamburgs. They have not been quite perhaps so universally kept as the other sorts, as, owing to the difficulty of breeding good ones, they have been in a few hands for generations—indeed, there is one little spot I could name where nearly all the good ones have been bred.

In starting to breed Golden Spangles you must have two pens, one for cock breeding and one for pullet breeding. I will begin with the cock-breeding pen. The cock in this pen should be as big as possible to begin with; I disiike a little mean gold cock. The tail in the Golden Spangled cock is always particularly full and well furnished, the sickles often nearly touching the ground; the color of the feathers is a beautiful rich green-black. The color of the body should be a rich mahogany, the richer the better, and as even as possible all over right down to the wing-ends. Many otherwise good cocks go light just at this point; this altogether spoils their appearance and value. The neck hackle and saddle should be beautifully striped with rich green-black in the centre and a red edging like the body color. Avoid a bird with a sooty hackle on which there is a lot of black at the lower edge. The breast is the difficulty, however. Here nine out of ten cocks fail utterly. I do not know why it is, but where Silver cocks are so good, gold cocks often fail shockingly. You will find breasts nearly all black; these, of course, are "thinned out" (I do not say it is right, but it is done, in spite of Mr. Williams.) Then you will find breasts with great splashes of color, or again, you will see a cock not spangled at all, but laced like a Polish. What you want is a breast as perfectly and evenly spangled as a silver. It can be bred so, so let us all try after this point. The bars should be particularly heavy, and even what we call "striking," and the same remark applies to the steppings. I may remark for the benefit of Mr. Williams, that the bars of gold cocks are always "pulled" in order to make them come "stronger." The comb should be neat, well set on, with plenty of work and a good long leader; face, cherry red, and ears round, smooth and particularly sound. Often gold cocks excel all others in the two points of ears and heavily-furnished tails. The legs are blue.

For this sort of cock you want some good cock-breeding hens or pullets. In color they should match the body color of the cock. Their heads must be neat and their ears pure white, and the general tone of the spangling should follow the cock. For breeding you must pick out hens really spangled on the breast, and the spangling must be even, half bay and half green, or there will be no good chickens from them. The important thing is to get hold of the right blood, otherwise you will do no good. Select the female relatives of one of the winning cocks and you will not go far wrong. When you go to buy Golden Spangles put plenty of brass in your pocket, plenty of brass in your conduct, and be very, very polite, or you will be sent empty away.—Rev. C. D. Farrar in the Feathered World, England.

GILSEY HOUSE
BROADWAY, COR. 29th ST.
NEW YORK CITY.
...EUROPEAN PLAN...
The most conveniently located hotel in New York. Entirely modernized and refurnished; ranks with New York's best hotels. Cuisine and service unexcelled.

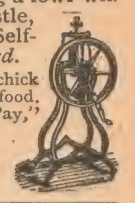
Poultry Diseases.



[Continued from May 11th Issue.]

I have already explained that "prevention is better than cure," and while most people readily admit this fact, it should be remembered that not all the ingenuity, skill and tact with which an experienced breeder is endowed can hinder the fulfilment of God's natural laws—included in which are visitations of sickness and disease in one form or another. At the same time it, I think, has been wisely ordained that many ailments may be prevented by observing certain rules and others cured by timely administration of suitable remedies. Borrowing a paraphrase from the well-known truism, "A stitch in time saves nine," I would say, "A stitch in time saves many lives."

But great practical experience is needed to enable a person to detect poultry ailments quickly, and knowledge of this kind can only be gained by strictly observing the habits of fowls and much watchful attention and care. Every "move" should be carefully noticed, so that the slightest omission in carrying out natural habits may be instantly detected. By this means much information will be gained that cannot be picked up in any other way. Coming to the point, every poultry keeper should know that a more or less disturbed or ruffled appearance of the plumage is frequently one of the earliest indications that a fowl is out of health, as is also a want of gloss on those parts usually bright, such as the back, shoulders, neck and breast. It is worth remembering, too, that an ailing fowl rarely carries its tail in a natural position, this appendage being either pendulous or open and fan-like. The feathers on the breast in the immediate vicinity of the crop are sometimes loose and fluffy, clearly denoting that derangement of that organ, if nothing more serious has to be feared. It may be pretty well relied on that whenever the plumage or any part of the body is awry, sickness or disease is present.

The comb perhaps is more susceptible to change than any other visible part on the first approach of any functional disturbance. The veriest tyro in poultry culture knows, or ought to know, that the comb of a healthy fowl should be of a bright vivid red color, indicative of that vivacity and vigor so strongly marked a characteristic of the domestic fowl. Whenever the comb is flabby to the touch, dull, dark or light in color, some one or other of the disorders presently to be considered will have to be reckoned with. It will probably have been noticed by some of my readers that if the comb be subjected to gentle pressure between the finger and thumb, a mark will be plainly visible. Now, if this mark quickly disappears it indicates health, for the blood is flowing freely through every vein in the body, and little or nothing ails the bird. On the other hand, if the part of the comb from which the blood has been displaced by pressure remains light colored and white for any length of time it may be safely concluded that the circulation is faulty and liver derangement or more serious disease has to be feared. Of course other disorders may be indicated by the state of the comb, but these I will endeavor to explain later on. The face, in addition to the comb, is peculiarly susceptible to undergo a marked change when a fowl is unhealthy, often assuming a death-like sickly hue. The same may be said of the wattles, but the change is less apparent. The eye is another index that should be closely watched. I need scarcely stay to explain how greatly this important natural instrument may be affected by quite commonplace ailments. It is so with mankind, why not also with animals and birds—including, of course, fowls? The eye of a healthy subject is bright, clear and watchful, so that if dulness of this organ be observed, close watch should be kept for other symptoms that will more clearly define the sickness or disease with which the patient is affected.

Then the excrement will often assist in supplying a clue to the malady when all other means fail. An observant person will have noticed that the "droppings" of a healthy fowl are moderately firm, brown, black and white in color, the white part urea, being specially indicative of a sound and healthy liver and spleen. When the dung is loose and frothy, either the liver or bowels are affected—sometimes both. It should, however, be remembered that the bowels may be temporarily deranged without any organic disease being present. For instance, that excitement almost inseparable from the show-pen may disturb the bowels, and without doing more than temporary harm. But when the excrement is watery, thin and greenish in color, an inflammatory action of some important organ is indicated.

Stearns New Model No. 7
Ball Bearing Bone Cutter
Back Geared Three to One.
It is geared to save power, making it the easiest running, fastest cutting bone cutter ever built. It will cut anything a fowl will eat—green or dry bone, gristle, meat, corn or vegetables. Self-regulating. *It cannot be clogged.*
Green cut bone brings the young chick to maturity quicker than any other food. Our book, "How to Make Poultry Pay," explains how and why. Sent *free.*

E. C. STEARNS & CO.,
Box 12, Syracuse, N. Y.

That most important part of fowl mechanism, the crop, has much to contend with, for into it everything a fowl picks up certainly goes. No wonder then that disturbance, if not actual disease of this first stomach of a fowl is one of the most common ailments a poultry-keeper has to contest. The healthy condition of a fowl's crop may be likened to a piece of india-rubber i. e., it is elastic but moderately firm, whereas a sick fowl's crop soon becomes loose, puffy and flabby. Especial notice should be taken of the color of the outer skin. By blowing back the feathers covering the crop it will be seen at a glance whether the skin be natural or discolored; if dark or black it may be concluded that a decomposition of food, or worse still, of tissue, is going on.

Then the breathing must not be overlooked—indeed, particular attention should be paid to the manner in which the process is performed, for much light may be thrown thereby on an otherwise obscure ailment. For instance, when the breathing is labored, the lungs are generally affected, but it should be carefully noted that nearly all affections of either the lungs, liver or bowels, are accompanied by a more or less perturbed state of the respiratory organs. When the bronchial tubes are out of order, the breathing is quickened, with difficulty performed, and invariably accompanied by a rattling noise in the throat and dry cough. But much that is interesting under this head must be reserved until I come to dilate on diseases of the lungs and other organs of respiration.

The mouth should be opened, for from its general appearance an important clue in the elucidation of sickness may often be gathered. Let me here state that the normal condition of a fowl's mouth consists in the skin or lining, as well as the tongue, being of a deep pinky color, bright and perfectly free from spot or speck of any kind. If the secretions are white, slimy or of sickly hue, a bird is out of health, and in ninety-nine cases out of every hundred the action of the liver is at fault; but it must not be concluded hastily that actual disease is present, for temporary derangement may cause similar symptoms. Look well down the throat, carefully observing the state of the œsophagus or gullet, which in a healthy subject should be almost flesh-colored, smooth and shiney. An experienced person will keep a sharp look-out for ulceration, scrofulous deposits or the usual signs of congestion. Let me advise the inexperienced to do the same. The symptoms of that much-dreaded disease, "gapes," incidental to chickenhood, had better be reserved until the plague is discussed. An external examination of the body, head, neck and legs, will often reveal some trouble that might otherwise remain occult. An examination of this kind is expeditiously and effectually performed by running the fingers over all parts, especially the abdomen, and not forgetting the joints of the wing. The lower parts of the abdomen should receive most minute attention, using gentle pressure, if necessary, in searching for any trouble that may be suspected in that quarter. Prolapsus or falling of the bowels, commonly called "down behind," is most to be feared, the symptoms of which are a large shiny swelling, rather elastic than otherwise at first, getting firmer as the disease becomes established; and a wincing and flinching, gasping for breath when the enlargement is touched. Tumors are harder, much firmer to the touch

and generally well localized. Then cases of egg-binding may be distinguished by the swelling being a little to the left of the passage from the body; besides, an egg can generally be felt. Enlargements of the joints may be occasioned by rheumatism, gout, scrofula or accidental injury.

I have endeavored, as plainly as I can, to put before my readers a few commonplace hints that should be useful in attempting to arrive at a correct diagnosis of and distinguish one disease from another. Much useful knowledge will be gained by making post-mortem examination of fowls that die of disease, also by noting and comparing the appearance of the liver, lungs, heart, bowels, in fact all parts of those that are healthy, and killed for domestic use. Success or failure of the remedies employed depends so largely upon early treatment adopted that if such an examination as I have sketched out fails to reveal the malady, an ailing bird should be confined in a moderately warm pen free from draught, fed sparingly, with either Spratts Poultry Meal or other easily digested food, until the advice of an experienced friend can be obtained. This injunction may appear unnecessary, but it is not so, for many a valuable bird has been lost before now either through ignorance, want of thought in neglecting to provide suitable shelter, or by cramming a bird during sickness with hard indigestible grain. Then, again, it should be remembered that a few days' rest and quiet, with change of food, will often restore a fowl that is "out of sorts," without the aid of drugs, more quickly and more effectually than some persons give credence.—Richard Woods in Stock-Keeper, Eng.

Poultry Work at the Ontario Agricultural College.

[By W. R. GRAHAM, Manager of the Poultry Department.]

EGG PRODUCTION.

The production of eggs is one of the most important branches of the poultry industry and is at times not the least perplexing. Under proper conditions, it is fairly easy to get eggs during the winter months, but the absence of any one of these conditions makes the task rather difficult. The most important points are:

(a) To have good, healthy, well-matured young hens that are of a laying family. Yearling hens that have molted early and early hatched, well developed pullets are the most likely layers. Any others that may be in the flock should be discarded when winter eggs is the object in view.

(b) To have a comfortable house, with at least five to six square feet of floor space for each bird.

(c) To feed on good nourishing food and have plenty of pure, fresh water accessible at all times.

These are the most important requisites, and when they are all present good results are fairly certain to be obtained.

Methods of Feeding in Winter.—We practice a method somewhat different from the ordinary practice. Our experience in feeding warm mashes in the morning is that, unless the feeder is exceptionally careful, the fowls gorge themselves and as a result take to the roost for the greater part of the day, which is more favorable to the production of fat than of eggs. A hen must be in good condition when laying and the amount of flesh must be sustained, if continued laying is desired, but excessive fat is generally more harmful than a slight reduction in weight. In order to determine a hen's condition it is usually advisable to weigh one or two birds in each pen every two weeks or so. While it is true that an experienced poultryman can tell by lifting the fowl whether they are losing in weight or not, yet the scales are the only accurate and reliable test. The first feed in the morning is given about nine o'clock and consists of a handful of whole grain, usually wheat, to every three birds. This is well scattered in the litter on the floor. Previous to this the birds have been kept busy digging in the litter for the few morsels that may have been left from the evening meal of the previous day. When the forenoon is nearly gone the fowls are given a little cut bone or cooked meat each day and, in addition, all the pulped roots, such as turnips or beets, that they will eat. The amount of bone or meat given is small, the object being to give about two and one-half pounds to every sixteen hens during a week's time A little whole grain is given soon after one o'clock, either barley or oats, not more than three handfuls to a dozen hens, the object being to induce exercise. If the hens are losing in flesh less exercise is given. In such cases a larger feed is given early in the morning and the noon feed of grain is generally omitted. The mash is given about four in the afternoon, not that good results cannot be obtained where no mash is given, but because the mash is a convenient form of balancing the ration, and it adds variety to the food. The mash is composed of equal parts by measure of stale bread, corn meal, bran, ground oats and clover meal, or lawn clippings. These are dampened with skim milk or water, according to the abundance of the former. This should be fed warm, if possible, and given in as large quantities as the fowls will eat. After having all the mash they desire, the fowls are given a little whole grain, and whatever may not be consumed at night will be eagerly sought after next morning and be a means of giving exercise which produces warmth. This method of feeding induces sufficient exercise, leads to the eating of vegetables, prevents excessive fat, promotes health, and generally results in a fair production of eggs. It also prevents feather pulling and egg eating—troubles which are in many cases due to lack of exercise or the absence of some egg-forming material in the foods given.

Eggs were received in fair numbers last winter, and the record at the present time (January 1st, 1901) is quite satisfactory.

The White Langshans, Plymouth Rocks and Wyandottes proved to be superior winter layers. Andalusians and Leghorns did the best during the summer months.

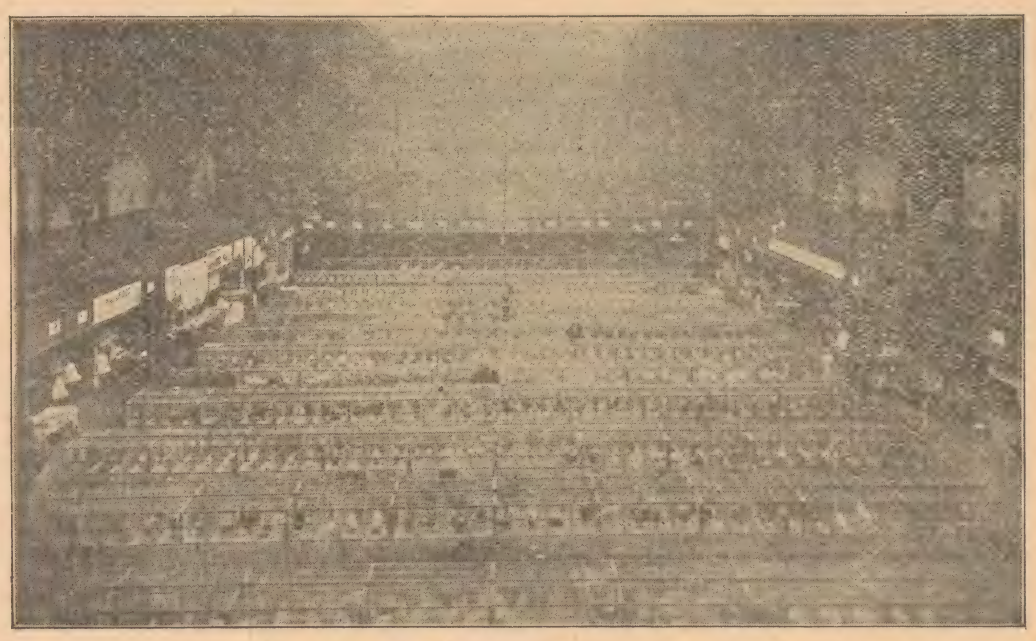
As an example of the value of well developed pullets, as compared with old hens, the following record is given:

Ten well developed pullets laid an average of 122 eggs each during the year. Four dozen of these were laid before the middle of March. Three of the pullets were allowed to hatch and rear a brood of chickens.

Twelve hens (Barred Plymouth Rocks, one to three years of age), laid an average of 84 eggs each, about a dozen of which were laid before the middle of March, and five were allowed to hatch and rear broods of chickens.

Trap nest boxes have been used during the season to a limited extent, and there is no doubt as to the value of these nests when one is desirous of building up a flock of good layers, as it clearly shows the drones as well as the heavy producers. It is equally valuable in breeding exhibition stock, which requires sure and accurate pedigree breeding. It is quite true that these boxes require considerable attention, but the results far more than repay the time taken in recording the number of eggs laid. By the use of these nests we found that one hen in the pen did not lay a single egg, although always bright and vigorous; another did not lay more than seven eggs before becoming broody, while still another never showed the least inclination to sit. This last hen laid 180 eggs during the nine months in which the box was in the pen.

There is no doubt but that many of the pens would make a much better average egg production were it not for the handling by students from January to April and the constant disturbance by excursionists during the month of June. This is particularly true of the lighter and more excitable breeds, such as the Andalusians and Leghorns. In order to nave fowls do well, they must be very carefully handled, and rough treatment or frightening is always to be avoided.



HATCHING SEASON.

Eggs were not so fertile as usual this season, nor was the vitality of the germs so strong as in previous seasons. This was a general complaint from all parts of the country, and appeared to be chiefly due to the cold weather during the month of March. The fowls appeared to have suffered much from the long confinement, and it was only those who had conditions such that their stock could exercise in the open air that were successful in getting large hatches early in the season. It is claimed by some that hens which are forced to lay during the winter lay eggs lacking in vitality during the spring. They consider that the hen's constitution is not equal to the excessive strain of constant egg production, without impairing the fertility of the eggs produced. Our observations on two pens of pullets—one of early hatched birds, laying well during the winter, and the other of late hatched birds, laying but little during the winter—do not support this claim.

There is room, however, for much experimental work along these lines. The question is a serious one for broiler raisers and it undoubtedly requires close observation. I am of the opinion that had the fowls in our poultry department been able to take exercise out of doors, on manure piles, or in open sheds protected from cold winds, we should have had a much larger percentage of fertile eggs. Hence I ask for a small appropriation for the construction of a house on this plan.

The first incubator was started on January 16th with 158 eggs, from which 49 chickens were hatched. The percentage of fertile was not high and there was a number of weak germs among those that were fertile. During the early part of the season the germs were much stronger than in March. The percentage of strong germs in the fertile eggs did not increase much until about the 20th of April. Eggs laid after that date hatched as high as 78 per cent. The average for the season was 51 per cent.

[To be continued.]

Cleveland Show, 1901.

All About Eggs.

Any one knows an egg when he sees it, but comparatively few persons know anything about eggs. The extent, generally speaking, of Anglo-Saxon information about the egg is that it is the fruit of the hen and good to eat. Among other peoples also an egg is an egg, but whether it is to be classed as the fruit of fowl, reptile or saurian depends upon latitude and longitude—for in some countries snakes' eggs are considered a food delicacy, and in still others the eggs of alligators, crocodiles, turtles, lizards, certain insects, gulls and all other sorts of sea fowl are common articles of diet. Plover eggs are prized in England and Germany, while in this country the eggs of sea birds have long been gathered for food. On the eastern shore of Virginia eggs of the laughing gull are eaten frequently and the eggs of gulls, terns and herons were a few years ago gathered in great quantities along the coast of Texas. Thousands of eggs of gulls and murres have been gathered annually on the Farallon Islands off the coast of California.

Turtle eggs are highly prized in most countries where they are abundant. They were once more commonly eaten in America than now. The eggs of the terrapin are usually served with the flesh in some of the ways of preparing it for the table. Fish eggs, especially those of the sturgeon, are eaten in large quantities, preserved with salt under the name of caviar. Shad roe is also a familiar example of the use of fish eggs as food.

A fertile egg contains an embryo and is at the same time a storehouse of material for the development and growth of the young individual from the embryo until it has reached such a stage that life is possible outside the narrow limits of the shell. The embryo is situated quite close to the yolk, which furnishes the nutritive material for its early development, the white being used later.

Since in all cases the egg is designed to furnish the sole source of material for growth and development of the young individual for a considerable time, it is evident that it must be a perfect food for the purpose intended. Milk is another familiar example of animal food containing all the elements of a complete food

for the young and growing individual. Milk and eggs are frequently spoken of as perfect foods on this account. The designation is. however, misleading, for although it is true that they contain all the required elements for the growth and maintenence of the young bird or the young mammal, as the case may be, the elements are not in the right proportion for the sole nourishment of an adult individual.

The eggs of different kinds of domestic poultry vary in size as well as appearance, and there is also a considerable range in the size of eggs of different breeds. Thus, hens' eggs range from the small ones laid by Bantams to the large ones laid by such breeds as Light Brahmas. On an average a hen's egg is 2.27 inches in length and 1.72 inches in diameter or width at the broadest point and weighs about two ounces, or eight eggs to the pound (½ pounds per dozen.) Generally speaking, the eggs of pullets are smaller than those of old hens, those of ducks somewhat larger than hens' eggs, while those of turkeys and geese are considerably larger. Guinea eggs, on an average, measure 1⅞ by 1½ inches, are rather pointed at one end and weigh about 1.4 ounces each, or 17 ounces to the dozen. Goose eggs weigh about 5.5 to 6.7 ounces each, or about five pounds to the dozen—that is, more than three times as much as hens' eggs.

Eggs are especially rich in protein, the nitrogenous ingredient of food. This material is required by man to build and repair the tissues of the body. Some energy is also furnished by protein, but fats and carbohydrates supply the greater part of the total amount needed. Combining eggs with flour and sugar (carbohydrates) and butter, cream, etc., (fat) is perhaps an unconscious effort to prepare a food which shall more nearly meet the requirements of the body than either ingredient alone. When eggs, meat, fish, cheese or other similar foods rich in protein are eaten, such other foods as bread, butter, potatoes, etc., are usually served at the same time, the object being, even if the fact is not realized, to combine the different classes of nutrients into a suitable diet. The wisdom of such combination as well as of other generally accepted food habits, was proved long ago by practical experience. The reason has been more slowly learned.

The shell of the hen's egg is made up very largely of mineral matter, containing 93.7 per cent. calcium carbonate, 1 3 per cent. magnesium carbonate, 0.8 per cent. calcium phosphate and 4.2 per cent. of organic matter. The shell of the egg is porous, and the micro-organisms which cause the egg to ferment—i. e., to rot or spoil—gain access to the egg through the minute openings. Like the moid spores, these micro-organisms are widely distributed.

It generally is conceded that eggs which are perfectly fresh have the finest flavor. After eggs have been kept for a time the flavor deteriorates, even if there is no indication of spoiling. Such differences are especially important when eggs are used for table purposes. The flavor of even perfectly fresh eggs is not always satisfactory, since it is influenced more or less by the character of the food eaten by the laying hens. The New York State Experiment Station studied the effect of different rations upon the flavor of eggs. Those laid by hens fed a highly nitrogenous ration were inferior to those from hens fed a carbonaceous ration. They had a disagreeable flavor and odor, the eggs and yolk were smaller, and the keeping qualities were inferior. In a test at the Massachusetts Experiment Station to compare cabbage and clover rowen as the green portion of a ration for laying hens, it was found that the eggs produced on the former ration, although heavier and possessing a higher per centage of dry matter, protein and fat, were inferior in flavor and cooking qualities to eggs produced on the ration containing clover. The North Carolina Experiment Station studied the effect of highly flavored food upon the eggs produced. A small quantity of chopped wild onion tops and bulbs was added to the feed of a number of hens. After about two weeks the onion flavor was noticed in the eggs laid. When the amount of onion feed was increased the flavor became so pronounced that the eggs could not be used. A week after the feeding of onions was discontinued the disagreeable flavor was no longer noticed. From these tests it appears that the flavor of eggs may be materially influenced by the food consumed.

Occasionally a person is found who is habitually made ill by eating eggs, just as there are those who cannot eat strawberries or other foods without distress. Such cases are due to some personal idiosynerasy, showing that in reality "one man's meat is another man's poison." A satisfactory explanation of such idiosyncrasy seems to be lacking.

Overindulgence in eggs, as is the case with other foods, may induce indigestion or other bad effects. Furthermore, under certain conditions eggs may be the cause of illness by communicating some bacterial disease or some parasite. It is possible for an egg to become infected with micro-organisms, either before it is laid or after. If an egg remains in a dirty nest, defiled with micro-organisms which cause typhoid fever, carried there on the hen's feet or feathers, it is not strange if some of these bacteria occasionally penetrate the shell and the egg thus becomes a possible source of infection. Judged by the comparatively small number of cases of infection or poisoning due to eggs reported in medical literature the danger of disease from this source is not very great.

Eggs are used in nearly every household in some form or another in varying amounts. From the results of the numerous dietary studies made under the auspices of this department and by the agricultural experiment stations, it has been calculated that on an average eggs furnish 3 per cent. of the total food, 5.9 per cent. of the total protein, and 4 3 per cent. of the total fat used per man per day.

There are many ways of testing the freshness of eggs. "Candling" is the method most commonly followed. The eggs are held up in a suitable device against a light. The fresh egg appears unclouded and almost translucent; if incubation has begun a dark spot is visible which increases in size according to the length of time incubation has continued. A rotten egg appears dark colored.

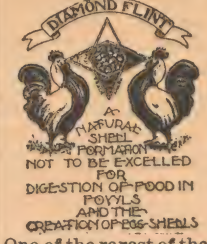
The age of eggs may be approximately judged by taking advantage of the fact that as they grow old their density decreases through evaporation. A new laid egg placed in a vessel of brine made in the proportion of two ounces of salt to one pint of water will at once sink to the bottom. An egg one day old will sink below the surface but not to the bottom, while one three days old will swim just immersed in the liquid. If more than three days old the eggs will float on the surface, the amount of shell exposed increasing with age, and if two weeks old only a little of the shell will dip in the liquid.

Eggs are sometimes removed from the shells and stored in bulk, usually on a commercial scale, in cans containing about fifty pounds each. The temperature recommended is about 30 degrees Fahrenheit or a little below freezing, and it is said they will keep any desired length of time. They must be used soon after they have been removed from storage and have been thawed.

In the East Indian Archipelago salted ducks' eggs are an article of diet. The new laid eggs are packed for two or three weeks in a mixture of clay, brick dust and salt. They are eaten hard boiled. In China ducks' eggs are buried in the ground for ten or twelve months and undergo a peculiar fermentation. The hydrogen sulphid formed breaks the shell and escapes, while the egg becomes hard in texture. The final product does not possess a disagreeable odor or taste. Eggs treated in this or some similar way are on sale in the Chinese quarter of San Francisco. A sample recently examined had the appearance of an egg covered with dark-colored clay or mud.

Different methods of evaporating or desiccating eggs have been proposed and several products prepared in this way are now on the market. The egg is dried in or out of a vacuum, usually by a gentle heat or by currents of air. When placed on the market the dried egg usually is ground. Sometimes salt, sugar or both have been used as preservatives. Such material is merely egg from which the bulk of the water has been removed. If the process of manufacture is such that the resulting product is palatable and keeps well, the value of evaporated eggs under many circumstances is evident.

This material is used by bakers to some extent as being cheaper when fresh eggs are high in price. It is also used in provisioning camps and expeditions, since desiccated foods have the advantage of a higher nutritive value in proportion to their bulk than the same materials when fresh. Fresh eggs contain about 25 per cent of dry matter. If all the water is removed in preparing evaporated eggs one pound will furnish nutritive material equivalent to about four pounds of fresh eggs. One of the commercial egg products recently tested appeared to be dried egg coarsely ground. For use it was thoroughly mixed with a small quantity of water. The mixture could then be fried or made into an omelet, etc., and was found to be very palatable, closely resembling in taste the same dishes made from fresh eggs.



An egg substitute has been manufactured from skim milk. It is said to contain the casein and albumen of the milk mixed with a little flour, and is put up in the form of a paste or powder. Such material is evidently rich in protein, and, according to reports apparently reliable, is used in considerable quantities by bakers and confectioners in place of fresh eggs.—New York Press.

American Black Minorca Club.

At a meeting of the Board of Directors of the American Black Minorca Club, held in New York City on the 1st of May, the names of George H. Northup, F. B. Zimmer and Rowland Story were recommended to the Philadelphia poultry show from which to select a judge of the Minorca class at the next Philadelphia meeting. Northup received 27 votes, Zimmer 22, Story 7, others 4. Since last club meeting fifteen new members have been received and the outlook for many more is very encouraging. Those wishing a copy of the club catalogue will please enclose a 3-cent stamp to the secretary, who will be pleased to forward the same.

—Pigeon men and hen men should push the American Fancier. Advertisers claim they get better results than from any other paper.

One of the rarest of the Rare Deposits yet found in the bowels of the Earth.

DIAMOND FLINT. Nature's blending of Grit, Lime and Phosphoric Acid, not to be excelled for Digestion of Food in Fowls and the creation of egg shells, adding vigor to the strongest of your flock.

Scientists claim this deposit to have been formed more than 5,000 years ago, and it is recognized by them and the natives, who have been using it for more than 100 years for their Poultry, as one of the most valuable products of the earth yet discovered for any and all kinds of fowls—Second in Hardness to Diamonds Only, hence the name "DIAMOND FLINT," 'tho formed of a hetercgeneous mass of shell-fish and shells from which a milky substance flows when first exposed to the air. Does away with all need of oyster shells. Instead of buying a ton of oyster shells and a ton of ordinary poultry grit, order a ton of DIAMOND FLINT and you have all the properties to be obtained in both the others, and many other beneficial qualities not contained in either, at a great saving of time, labor and money.

Doctoring Fowls.

S. L. Roberts, in the California Cultivator, says: The amount of stuff that goes into the press in relation to ailments of fowls and the prescribed cures therefor would apparently argue against the business of poultry culture. It has the tendency to make people think thoroughbred fowls are delicate simply because they are thoroughbred. This is, per se, not true. Indeed, if one follows the practice of crossing breeds every year for the purpose of maintaining stamina he will soon learn that his stock is deteriorating in vigor; but if he go further and "change roosters" every year within the breed he will introduce disease if he do this without understanding. Putting in new males every year augments the chance of putting in new disease, for how can one know if the consignor has not diseased stock? A diseased bird may apparently be healthy, but in time the bad blood in its circulation makes its appearance in some form or other. No doubt the breeder has seen a cockerel grow up from the shell and until matured to all appearance remain free from any indication of diseased blood. Then will appear bronchial trouble or rheumatism, liver complaint, roup in head or foot and so on. And this bird has grown up with those from imported eggs to be with the native stock, the latter all remaining healthy. I saw a case of this kind this spring. The specimen developed a severe case of roup in the right foot. Aside from coarse leg scale and a tendency to elephantiasis, he is a fine specimen, and is yet, although the diseased foot is in evidence against him. The foot was lanced in three places, treated, re-lanced and re-treated, and will probably recover. But his blood would be unsafe to use.

Whereas if one breed in line, keeping within his own blood of males and be cautious and slow in bringing in new infusion by way of the female, the danger is minimized and the breeder knows what he is doing all the time. He has little need of the medicine chest, provided, always, the breeder keeps his stock properly and has commenced with the right stuff at the foundation.

In case of need it may be well to keep on hand for emergencies the following simple things:

Turpentine—For bruises, inflammation, worms, broken limbs.

Tincture of Iron—For chickenpox and ulcers on face and canker.

Chlorates of Potash—For swabbing throat and fauces and of epiglottis.

Castor Oil—For movement of bowels and general cleansing of the crop and gizzard in cases of diarrhœa occasioned by indigestion.

Bicarbonate of Soda—For putting into mashes to aid digestion and prevent "sour crop."

Camphor—To be used with charcoal, sulphur and soda in cases diagnosed as cholera, blindness being one of the indications.

Splints and Surgeons' Plasters—For broken limbs and wings.

Olive Oil—For vent gleet and the removal of broken eggs from oviduct.

Silk Thread and Needle—For sewing crop when it has been opened for disgorgement.

Carbolic Acid—Disinfectant.

None of the foregoing is costly and much of each is not needed. Put them in a little locker and put the key thereto on your key ring—and don't forget it.

You may not need these things at all—not all of them in a year, but when you need them you want them bad.

A GOOD PER CENT.

The American Fancier is responsible for a good per cent of my orders.

ALFRED THOMAS.
Rockville, Conn., May 11, 1901.

EXPLAINED.—First Long Island Hen: What a studious young rooster Mr. Piymouth Rock is, always burning the midnight oil. Second Long Island Hen: Well, it is hereditary with him. You know his mother was a kerosene incubator.—Brooklyn Eagle.

Standard Breeds in Verse.

A verse I'll write of chicken fold;
Classes 11 there are, we're told:
American, Asiatic, and the "Med,"
All good birds and high bred.

Then Polish, Hamburg, French and Dorking.
Bantams three, of various sorting;
And Class 11, the Miscellaneous class,
Although the last, we'll not them pass.

The Plymouth Rocks are four kind,
And in Wyandottes five you'll find;
The Javas two, are very slick,
And also comes fair Dominic.

In Asiatics we find three again—
Brahma, Cochin and good Langshan;
Of Brahmas two and Cochins four,
And in Langshan just two more.

Then comes the "Med," of class three,
In that lot five you'll see—
Leghorn, Ancona and Minorca fair,
Andalusian, Spanish, another pair.

In the Polish class, seven's their lot,
Each with different colored spot;
White and Golden, Silver, Buff,
And Black and Bearded, that's enough.

Then comes Hamburg and good Redcap,
How proud they look when their wings they flap;
Gold and Silver and Spangle, too,
And some are Pencilled, quite a few.

White and Black are also there,
A fine, good bird and very fair;
All are rich and very choice,
But Minorca leads, that's my voice.

Creve Cœur, La Fleche and Houdan,
All come in the "Frenchy" clan;
You will find, on their back,
Some are mottled and some are black.

The next one follows is the Dorking breed,
Which bear good and fruitful seed;
White and Colored and Silver Grey,
A good investment at any day.

Then Class 8, the Bantam Game,
Fowl which won quite great fame;
Black and White, Silver, Gold,
A first-class bird, so I'm told.

Birchen, too, Breasted Red,
Always game 'tis always said;
We also find some Red Pyle,
A bird of good and pleasing style.

In Class 9, Game Oriental,
Fine and good, and Ornamental;
Indian, Malay and Sumatra style,
Malay Bantam is in this file.

Then Class 10, with good Sebright,
Rosecomb, too, Black and White;
Booted, Brahmas and Japanese,
Some prefer birds like these.

And the Polish, Cochins, we'll not forget,
Of various colors, they're in this set;
And now we come to the last call,
I think I've mentioned one and all.

Silky White and Sultan, too,
Frizzles, Rumpless, will that do?
All are good and all are fine,
But good Minorca, that's my line.

Her eggs are cheap and for sale
If an order to me you'll mail;
The price is low and stock is fine,
Story's first in that line.

ANON.

Superintendent of Pet Stock at the Pan.

Mr. T. Farrer Rackham has been appointed Superintendent of Pet Stock at the Pan-American. This is a most excellent choice and it rests with fanciers of pet stock whether the exhibits will reach the high standard set for it by Mr. Rackham. The Belgian hares, rabbits, cavies and cats as well as other pets will prove a great drawing card at the Pan and exhibitors are bound to reap substantial benefits in more ways than one.

Transfer of Pedigreed Belgian Hares.

This is to certify that I have sold to Messrs. McCance & Snoddy, of Oil City, Pa., all my Belgian Hares, good will and cuts, and refer all intending purchasers to these honorable gentlemen.

L. L. LUCAS.

Oil City, Pa.

PIGEONS.

Lofty Thoughts of the Editor

The excitement is over and the meeting of the American Tumbler Club at Boston, May 8th, concluded a remarkably interesting meeting by voting to hold a special meeting at the Pan-American Exposition during the week the pigeon exhibit is on. They also appointed a committee of three to look over the proposition of the feasibility of an amalgamation of the two Tumbler Clubs, the Western and the American. Mr. Murry offered his resignation as a club judge, which was accepted, and after a very spirited nomination of Messrs. Edwards, Muir, Gavin, and Weston, Mr. Edwards was elected by 22 votes to 18 for his nearest competitor. The matter of Mr. Doremus' protest regarding the awarding of club prizes was not allowed, and the action taken at the annual meeting at Boston show was sustained, after much debate and the reading of many affidavits, together with a most remarkable explanation as to the manner in which one of our contemporaries, as explained by its editor, change, rechange and change again its advertisements, which was thoroughly enjoyed by those who are not on the inside as to the pecuniary arrangements of our modern fanciers' journals. Another very laughable incident was an offer of a wager of one hundred dollars by ——— that he could judge pigeons, and especially Tumblers, better than a man whom he had never seen nor had in any way any idea of the qualifications of the person to whom he was referring. The laughable feature was, he was the only man who took himself serious. Messrs. Twombly, Joos and Gavin, as representatives of the pigeon press, were made honorary members. There was a rumor to the effect that the old Boston Exclusive cup was to be surrendered by its keeper to the club and that it will be competed for at the Pan-American for the first time since it was won and lost.

—

Geo. J. Asman, of Detroit, president of the Western Tumbler Club, reports having quite a nice lot of young on the floor and is in hopes of having one or two good ones for the early show at Buffalo. He is in favor of amalgamation of the Tumbler Clubs, if an arrangement of one year East and one West could be brought about.

—

Why wouldn't it be a better idea to have the arrangements based upon a two section idea, keeping the two clubs as they are, but both under one set of rules and by-laws, and being, instead of two clubs, two sections of one club, holding yearly a western meet and an eastern meet, with an annual business meeting one year East and the next West for the transaction of business only?

—

In a letter from Mr. K. J. Muir, secretary of the Western Tumbler Club, he says: "I notice what you write in May 4th issue of the American Fancier regarding a national association of pigeon clubs. I wrote to the Pigeon News last year my opinion on the matter, and I think it is the only way out of it. I think you and I are not far apart on the question. My idea is to have each club elect one or more delegates to represent them at a national council meeting, and in that way you get fanciers of all varieties together. Give them power to act on all questions. Such delegate could get the feeling of his club on the most important questions; then, in case a member of his club wished a bill passed the national, let him have it presented by his representative. But to try and form a national club of individual members all over the United States, life is too short, I think. Would it be possible to have the specialty clubs send a delegate to the Pan-American, with power to act for the clubs, and so form a national council there?" This is the idea exactly, and we have plenty of time to do it, and if all hands will express their opinions in a short and concise manner and talk it over among the members of the club to which they belong, there is not a particle of doubt a representative body of fanciers can be called together at Buffalo and organize a club or association that will be of lasting good to the pigeon fancy, and in such a concentrated form that we have such organizations as are now in existence behind them.

—

Our western friend, Robert Joos, expressed great surprise some time ago about one of our pigeon fanciers going in for the Belgian. But from a rumor that looks good, Henry Tiemann, of Baltimore, has a Fox Terrier bitch coming over (Trefula Dame), half sister to Champion Go-Bang, and in whelp to H. J. Weaver's winning dog, Roath Rightaway. Pretty stiff, Henry. You must have saved your money while away last winter, and don't, for goodness sake, go entirely to the dogs.

—

Mr. Geo. D. Eustis has just bought a choice pair of Pigmies from Mr. Tiemann, from the Verge's lot.

—

Mr. Smith, of Brookline, Mass., the new recruit to the Pigmy Pouter Club, has not only bought the cream of Mr. J. Rough's winners, but has wound up by buying every Pigmy he owned, so that at the present time Mr. Rough does not own a Pigmy. We hardly think this will be the case long, however, as the little fellows hold a strong place in his affections.

—

As Boston and New York, as per schedule at present, are to clash, there will have to be a few new judges trotted out, for the old liners can't judge at both places at the same time. Let us hope, for their own good and our own pleasure, an arrangement can be made whereby it can be avoided, for we love them both. They are the backbone of the fancy, and while we shall do all we can for both let the conditions be what they may, how much more we can do if a clash is avoided.

—

We have asked secretaries of clubs and anyone who have any news or communications of interest to the pigeon fancy to not hesitate in using these columns, and have also in the invitation pointed out what a mistake for the furtherance of their own club's interest they make by not availing themselves of the privilege, but with few exceptions invitations are in vain. One of the exceptions is the genial secretary of the Owl Club, Mr. George Feather. He never tires in his efforts to further the interests of the club, and if a club in the interests of the Owl can be brought up to such a high position so can others. What a grand opportunity to push to the front such breeds as Carriers, Barbs, Fantails (one of the most popular of pigeons as well as beautiful), Show Homers, Archangels, Oriental Frills, Turbits, &c., but never a word. Wake up, secretaries, and say something. The strongest and largest clubs in this country have been brought about by using the press. I once heard a remark by a Fan man to the effect "that the paper was nothing but Tumblers; if they went fighting over their show-room battles they were saying what a wonderful bird the Tumbler was and writing descriptive articles of different varieties, etc.," and it was and is the truth, for you will see more Tumbler in the fancy papers than any other two breeds, and that's the secret of their success. It's only a few years since the first exhibition was held, at which some one hundred and sixty Tumblers were shown, and the aforesaid writing about them commenced by the dyed-in-the-wool enthusiasts, such as Messrs. Walton, Gavin and others. At the last Boston show there were over six hundred Tumblers on exhibition. Just think of it, nearly a show by themselves. The week following with Chicago and New York clashing, Chicago had nearly five hundred and New York nearly two hundred, making thirteen hundred Tumblers shown in two weeks and an expenditure of $750 for entry money. Now all breeds cannot do this perhaps, but there is no reason why the example of the Jacobin Club which from a state of dormancy, with some twelve or fourteen old standbys, has jumped from these numbers to some thirty-nine members in the course of one and one-half years, under the hustling regime of Mr. Charles Lang as secretary. The same can be said of the Western Tumbler Club. An effort was made some time ago to form a club at Chicago but it failed through the lack of effort as put forth by its secretary. See what a live one has done. Elect good secretaries and then let them talk things over through the journals, not forgetting that it takes money to run a paper, that ads. for the sale of surplus birds, feeds and loft utensils are always acceptable if the cash comes along with the order, and the persons so offering the same are up and above board. F. W. GORSE.

Highlandville, Mass.

DOWN A LITTLE FOR JUNE.

The demand for Silver and Partridge Wyandotte Eggs at Beaver Hill Farm has been heavy. We have returned dozens of orders that we could not fill at our regular prices, $3 per setting for Silvers and $5 for Partridge eggs.

In response to numerous requests for lower rates later in the season we have decided to name

THE FOLLOWING LOW PRICES FOR JUNE:

Silver Wyandotte Eggs $2 per Setting; 3 Settings $5.
Partridge 'Dotte Eggs $3 per Setting; 3 Settings $8.

Orders for eggs at these special prices will be filled in the order received.

A majority of our famous prize winners the past season were hatched in June.

A few Breeders of both varieties for sale in June
A good time now to get one of our fine Collie Pups

BEAVER HILL FARM, :-: BEAVER, PENN.
T. E. ORR, Prop. W. D. POOLE, Supt.

Pigeon Judges at the Pan-American.

The list of pigeon judges as approved by the executive committee of the Pan-American Exposition are as follows:

Joseph Gavin, Boston, Mass.
George Ewald, Cincinnati, Ohio.
F. L. Weston, Medford, Mass.
K. J. Muir, Chicago, Ill.
F. W. Gorse, Highlandville, Mass.
Charles E. Lang, Buffalo, N. Y.
Joseph Bardroff, Washington, D. C.
A. M. Ingram, Milford, N. H.
George Feather, Dorchester, Mass.
Henry Tiemann, Baltimore, Md.
Wellington Kennedy, Red Bank, N. J.
R. D. Craft, Somerville, Mass.

These twelve men are to form the jury who will pass upon the pigeon exhibit of the great Exposition just opened at Buffalo, N. Y. Twelve names better known to the pigeon fancy in America would be hard to find, and with but one or two exceptions all are men of wide experience and known ability. Nearly all have officiated with credit at our largest and best shows, and every one has been selected for his knowledge of pigeons as a whole, and especially of the breeds over which he will be called upon to officiate. Study this list of pigeon judges and not one will be found who has not been long connected with our fancy, not one will be noted whose name is not well and favorably thought of as honest, upright gentlemen and fanciers, whose aim for many years has been to build up the pigeon fancy in this country. Not one name can be pointed out as being put on that list as an ornament or through a so-called pull, or from any reason other than that of being a competent judge of pigeons. The aim of the management of this already assured the largest pigeon exhibit ever held on this continent will be to make it the cleanest and most satisfactory show yet held. Every exhibitor or intending exhibitor will be courteously treated, every question will be promptly answered and every promise will be rigidly kept.

Beginning with the list of judges, the first that we find is Joseph Gavin. Probably no fancier in this country is better known as a judge and writer than Joe Gavin. Where is the fancier old or young who does not know him? As an

all round pigeon judge, Mr. Gavin's ability and proficiency is well known. It would be hard to say what breed is really his specialty, for he is one of the very few who is considered capable of handling any class of fancy pigeons. Oriental Frlls and Tumblers have prob - ably fallen to Mr. Gavin's lot more often than any other varieties, but as a judge of Flying Homers and Dragoons he is equally proficient, and in Turbits and Owls he is very much at home. In fact, as previously mentioned, it would be hard to name the variety that could not be given to Mr. Gavin.

Next we have George Ewald, everyone knows him, and to personally know him is to like him. Like many others, how-ever, who have led a somewhat public life, he has his enemies, but his friends are legion and his ability or honesty as a judge of high-class pigeons has never been questioned. Mr. Ewald is another of our justly termed allround judges, and is to the West what Joseph Gavin has been to the East. It cannot be said of him that any particular breed is his specialty. Pouters have fallen to him at our recent large shows, and that he has handled them with a master hand is the opinion of a majority of those who have seen him at work. Fantails too, can be given to Mr. Ewald with perfect safety, as can be Turbits, Owls or any other Short Faced varieties.

Mr. F. L. Weston may be properly considered a specialist. His variety is Tumblers, and to place him at his best the Muff Legs come first on the list. At the two last Boston shows Mr. Weston has done the honors, and that his appoint-ment for Buffalo will receive the approval of all Tumbler breeders, there is little room for doubt. Mr. Weston has been a fancier and breeder of Tumblers for many years. He keeps pigeons because he likes them, and being well supplied with this world's goods is not in the fancy for monetary gain. As a genuine and thoroughly posted pigeon fancier, Mr. Weston is the true type, and many Tumbler fanciers will look forward to meeting him at Buffalo with much pleasure.

Mr. K. J. Muir is another specialist, and he will handle a portion of the Tum-bler exhibit. Although not so well known as Mr. Weston, his popularity among Tumbler fanciers in the West is conceded, and as secretary of the West-ern Tumbler Club has done good work for that organization. Mr. Muir judged all varieties of Tumblers at the Cincin-nati show last season, and his name will be found among the official judges of the Western Tumbler Club.

Mr. F. W. Gorse is well known to fanciers all over this country, and in the Tumbler fancy especially, his past record as an exhibitor of high class birds is sur-passed by no one, and approached by few. Mr. Gorse may be considered a specialist in Tumbler judging, but he is also competent to take on many other varieties.

Mr. Joseph Bardroff is a Pigmy Pouter breeder and a Pouter specialist. He says he knows no other breed and don't care to, but his knowledge of the little fellows makes up for what he does not know about other varieties. Members of the Pigmy Pouter Club will be pleased to hear of Mr. Bardroff's appointment, for they will feel that they can send their birds with safety if Joe is to be there to look after them. Mr. Bardroff has never judged at any of our large shows but his time is coming, and that he will give a good account of himself no one will doubt.

Mr. Charles E. Lang is another well known fancier, but he will also make his debut as judge at Buffalo. Mr. Lang is the popular secretary of the Jacobin Club, and although he is not particularly a specialist on this variety, he would perhaps feel most at home among them. He has been a fancier for many years and has bred many kinds of Toys as well as Pouters, and he should be qualified to pass upon most any variety set before him.

Mr. Wellington Kennedy officiated over the Jacobin classes at the last New York Show where some 200 specimens of this variety were shown at an average of ten or twelve per class. His work was well done, and the masterly way in which he went through his classes brought favorable comment from all who had the pleasure of watching him. Mr. Kennedy is a breeder of Jacobins, Owls and Turbits, and on either of these varieties very few can be found who could give him points.

Mr. Henry Tiemann is another of our allaround men, and his services at the leading shows both East and West the past 2 years have been much sought for. Probably no fancier handles or sees more pigeons of a high class order of all vari-eties in a year than Mr. Tiemann. Many consider him at his best on Magpies, but Turbits, Barbs or Oriental Frills would be considered proper varieties to fall to his care.

Mr. R. D. Craft is a fancier well known in New England. His services as judge at many of our smaller shows has been in demand, and at the great Boston show the past two years he has received the majority vote of the Dragoon Club to pass upon this section of the show. Whether or not he will judge Dragoons at Buffalo cannot be said, as the Dragoon Club will be invited to name the judge. As a fancier and judge, Mr. Craft is con-sidered well posted on all varieties, and whatever classes that are given to him will be properly handled.

Mr. George Feather has judged pigeons for many years at all of our largest Eastern shows, and the list would hardly be complete without him. Mr. Feather has passed upon Owls more than any other variety but quite at home on many other varieties, Archangels having fallen to him quite often. He is considered one of our competent allaround men, and has been a fancier and breeder of several varieties for many years. Every fancier or exhibitor who has ever attended the Boston or New York shows, knows George Feather. He will in all probability handle the Owls at Buffalo, which will undoubt-edly bring out a strong entry from the members of the Owl Club of which Mr. Feather is the secretary and treasurer.

Last but not least is Mr. A M. Ingram, whose smiling face is always in evidence where pigeon shows of any account are being held. Here we have another good allaround judge, who may at the same time be called a specialist on several varieties. Magpies have been allotted to him perhaps more than any other variety at the big shows, but he has also bred and judged Jacobins, Swallows, Nuns, Turbits and Owls during the past few years. As a keen observer and strictly up-to-date fancier, Mr. Ingram will not be found wanting, and in all classes over which he officiates fanciers can rest assured that the best bird will receive the blue ribbon.

This completes the official list of judges for the Pan American exhibit in October. As yet it is impossible to tell just what classes each and every judge will handle, but this will be published in due time. Judges and fanciers should co-operate from this time on to make the entries in all varieties as large as possible.

C. E. TWOMBLY,
Sup't of Pigeons.

Stralsunders.

Stralsunders are a small and elegant Cumulet from the province of Stralsund, in Northern Germany, and are, I believe, named after the town of that name on the shores of the Baltic, facing Rugen Island. As far as I can learn, they are a very ancient breed, and in the place of their nativity they are highly prized, the best specimens being very scarce and held in few hands, the possessors being loth to part with them, as they are considered to be the best of all high flyers. In appearance, especially when squeakers, they some-what resemble the big Cumulets (so-called English, but extraction question-able), but are smaller, have very brick-red eye ceres, the redder the better, and are much more graceful in every way. There are three colors, white, brown and black. The Whites are generally heavily ticked with red when squeakers, but it almost entirely dis-appears at the first moult, leaving them a most lovely pearl white. The Browns and Blacks are rich whole colors, lustrous in sheen, but having white flights. Their chief points are, first, the beautiful rich red eye ceres, which get more pronounced every year and give a most lovely appearance to the birds; eyes of a pearl color with a reddish inclination, clean legged, and a shape and carriage I can only describe as the personification of all that is graceful, as, whether in the loft or on the wing, one cannot help being struck with their wonderful style and grace; in fact, it is impossible to imagine anything more pleasing than a kit of these charming birds.

I find them terrific breeders and capital feeders, but their young are somewhat delicate till through the moult, when they are "as hard as nails," although they differ even in this respect, as the imported birds' young ones are much more difficult to rear than those bred from their young ones, therefore I confidently believe in time the difficulty will disappear and they will be no more trouble.

I was so delighted with my Whites that I simply longed to possess the colored ones, and at length, through the great kindness of Mr. Byron Cliff, of Bramley, near Leeds, my hopes were realized. I shall never forget my delight when they arrived; they sur-passed even all I had imagined them. The Whites were lovely, but these were simply superb, with their rich deep colors and beautiful iridescent hues.

As to their flying powers, I find they will soar in the air for from four to six hours without any training and at such a height as I have never seen attained by any other breed; in fact, I think they may be safely dubbed the king of high flyers. The Browns and Blacks are even higher flyers than the Whites, and are especially kept to send up after them to show them off, as it is difficult to follow white birds at any great height.

In the lofts they are the most charm-ing pets I have ever had, mine being so tame they will allow me to handle them at pleasure, and the cocks are the liveliest birds I have ever seen, always on the go, more like kittens than pigeons. Kept clean and not over-fed, I am sure none will ever regret having taken up this lovely little pigeon.

As an instance of their extreme tame-ness, I may say that a White pair I sent for portraiture had eggs a week before, and as I particularly wished to send this pair I slipped their eggs under some Rollers I had sitting. When the Stralsunders arrived back, I put their eggs back into their own nest and the hen immediately took to them and sat on them as contentedly as ever. I do not believe many birds would be so tractable and think it shows that we are on the best of terms.

STANDARD OF POINTS.

Head—Slim, not too big and strong, with flat foreheads or crowns.

Throat—Well cut.

Beak—Pretty long, the hen's being somewhat longer than the cock's in this respect.

Feathers (of Whites)—Pure white, inclined to be silky to the touch, a few chocolate feathers ticked on neck allowed, but never chucked or bearded.

Cere—Brick red, becoming more pronounced with age.

Eye—Pearl, fine centre, full of life, inclination to a reddish eye.

Appearance—Aristocratic and dili-gent.

Figure—Long, small and erect.

Blacks and Browns, pure and distinct breeds, same in points as their White relatives, but with a certain distinct number of white primaries, none entirely black or brown. The eyes resemble the White ones, but in the Black breed the red cere shows to greater advantage.—Arthur H. Walker in Feathered World, Eng.

American Owl Club.

Editor American Fancier: I am pleased to announce that Mr. E. C. Duffy, 308 E. Street, N. W., Washington, D. C., and Mr. Fred. C. Hanaford, Mansfield, Mass., have recently been admitted to member-ship in the above club. Fanciers who have not yet joined our ranks would do well to consider the inducements offered by the Club in the way of specials for next season's shows, and I may here state that ever since our organization in 1893 every special offered by this Club has been delivered to the member that won it.

At the forthcoming Pan-American Exposition to be held at Buffalo, N. Y., the last week in October, this Club puts up three silver cups valued at $12 each. At the New York show they offer fourteen handsome sterling silver dessert spoons, and in addition to these, Mr. Tom Willetts, band manufacturer, offers for the best 1901 bred Owl, any variety, wearing his enameled band, one of his elegant and now popular silver medals. The Club also offers six specials at the Boston show.

The secretary will be pleased to mail a copy of constitution and by laws, list of officers and members, copy of Standard and cut of its ideal Owl, with any other information required to all those who contemplate joining the Club.

GEO. FEATHER, Sec'y-Treas.
Ballou Ave., Dorchester, Mass.

PET STOCK.

The Black Belgian Hare.

Among the varieties which have sprung from the Standard or Red Belgian Hare, the Black is a promising and interesting one. This color is, I believe, due to reversion rather than to a new variation, and in the best specimens is intense in hue and pos-sessed of a rich gloss. It gives to its possessor an interesting appearance and will prove of value in propagating other varieties, if such a course should seem desirable. But in and of itself it is worth preserving.

Black is always a strong color. Unlike some colors, it is, also, an evidence of vigor. Black fowls, as a rule, are among the most vigorous varieties and are apt to breed with great fidelity. And what is true of fowls seems to be likely to be true of Belgian Hares. It is hardly to be expected that any variety will displace the Red in popular favor, but if any can, the Black, it seems to me, has the best chance of so doing.

If the skins are ever used in the manufacture of furs, which is a possi-bility not to be lost sight of, the Black ones will prove of the greatest value. We hear statements made frequently that the pelts of the Red Belgian are worth eighty cents each for this pur-pose, but so far as the writer has been able to ascertain the makers of these statements have substituted hopes and expectations for realities. But these hopes may eventually be realized. If one looks back a little he will find that skunk skins have increased in value from about ten to twenty-five cents to from one to two dollars each. And the highest price paid for skunk skins are paid for those which are most nearly solid black. And this, we believe, will be true of the Belgian skins, if fashion ever dictates their wearing and furriers demand them. The black ones then will be the ones which will have the call. Even for the purposes to which they are now put, the manufacture of hats, the black ones are really the most valuable, though the value at the present time is inconsiderable.

Black fowls for market purposes are objected to on account of the pin feathers, which, to some extent, dis-figure the carcasses. This renders lighter colored fowls more valuable for market purposes. But the objections made to black fowls are inapplicable to the Black Belgians, because the removal of the skin leaves the flesh as white in them as in any other variety. So, while the skins may be more valuable, the carcasses will not be less valuable. For market purposes, therefore, the Black Belgian is properly to be reckoned with.

To many persons the Black variety will make a strong appeal, because of the uniformity which it is possible thus to secure. There will always be in the Red variety a great variety in the coloring of the different animals. They will not look uniform because the shades of red will vary and the amount of black ticking will be greater or less in

1500 Incubator Chicks
FOR SALE WEEKLY.

Price $15 per 100 from my laying matings, see below. 32-p. Des. Cat. Free
BREEDERS, EXHIBITORS AND SHIPPERS OF
Line Bred (Since 1892) **Exhibition Stock. Line Bred** (Since 1888) **Laying Stock.**

The Kind to Market.

ELM POULTRY YARDS, - - HARTFORD, CT.
State Agent For The Star Incubator Company.

the different specimens But a well bred herd of Blacks will look alike to those whose eyes are not trained to discriminate carefully in figure. Color is always the most striking characteristic. A flock of Black Langshans look, at first, as nearly alike as so many black beans, but a careful study will show that there is no such thing as absolute uniformity. What looked uniform was simply the color, but the fowls have each its own individuality. So it is with Black Belgians. At first they create the impression of uniformity—individuality is a later discovery. But this first impression is what most men seek, and having found it, they are satisfied. Black Belgians will produce this first impression much more strongly than will the Reds.

Then, too, the black ticking of the Reds is one of the most valuable features of the variety. Amateur judges sometimes lose sight of the fact and favor a nice Red almost devoid of ticking, but an experienced judge would be obliged to pass such specimens with almost no notice. And it is a fact that this ticking is due to the Black ancestor of the Belgian Hare. English breeders, who have had an experience of from five to ten times the length of that of American breeders, find it profitable to cross in the Black specimens at times. especially when the does lack in vigor and color, in order to restore hardiness to their hares and to improve the quality of the ticking. More than that, black will be found useful in giving tone to the red color. Pigeon breeders found this out long ago, and some of the best red pigeons are bred from a mating of a black and a red. The red in the Standard variety of Belgians, where Standard specimens are bred together, has a tendency to grow weak and have a washed out effect. A cross with the black would deepen the red and give a livelier tint to it. The Black Belgian, therefore, is not without its use to the breeder of the Standard variety. An American writer of considerable experience as a breeder has said of the black: "If it fails to appear out of each one hundred born be assured that you are approaching a danger point, and see that you at once veer to the black. Cultivate the black in your strain if you wish perfection."

The Black Belgian Hare, therefore, because of its own beauty, the value and probably increasing value of its skin, the uniformity of appearance of the herd, and its use in sustaining the color and vigor of the red, deserves and is receiving considerable attention, and is likely to be one of the permanently popular varieties of this prolific animal.

SHINEMAN, Canajoharie, N. Y. 10–tf

WHITE PLYMOUTH ROCKS.—W. C. Pierce & Co., 1st, 2d, 3d cocks, 96¼, 95¼, 95¼; 1st, 2d, 3d (tie), 4th hens, 96, 95½, 95¼; 3d, 4th cockerels, (tied 2d), 95¾, 95¼; 1st, 2d, 3d, 4th pullets, 96¼, 96¼, 96¼, 96; 1st, 2d pens, 192 9-16, 191 5 16; also best display. This was made in hot competition, 78 birds in class. This record with our wonderful winnings at Chicago last year stand alone and unequaled on this variety. W. C. PIERCE & Co., Indianapolis, Ind. 78–24

BEAN'S BUFFS are the real winners as the following records for 1900 will show: At Cambridge, N. Y., one 1st, four 2ds, three 3ds; Watertown, N. Y., two 1sts and three 2ds; Poughkeepsie, three 1sts and three 2ds; Dryden, N. Y., four 1sts and two 2ds; Trenton, N. J., one 1st and two 2ds; York, Pa., five 1sts and four 2ds; Lancaster, Pa., four 1sts and two 2ds; Hagerstown, Md., in the hottest competition of the year, four 1sts, two 2ds and three 3ds. This is an unequalled record. Write for prices on show and breeding birds. All my stock is farm raised. Address F. G. BEAN, Fairview Village, Mont. Co., Pa. 73–24

"PARALLEL(=) BAR" Rocks.—Eggs during March and April, $2 per 13; $8 per 100. Stock direct blood of Gardner, Thompson and Montauk. New York winners. My birds have won in good company and chicks from these eggs will win for you. Send for leaflet. H. T. BROWN, Box 471 a, White Plains, N. Y. 79–30

BARRED PLYMOUTH ROCKS.—The 1st prize hen at the Johnstown show was pronounced by competent judges the best of the season. She won in the very hottest competition; so did my other hens. My stock is only of the very best and held its own at leading shows of America. Stock and eggs for sale. Eggs $2 setting. JOHN C. RICE, Johnstown, N. Y. 90–tf

JAVAS.

JONES. the "Java Man."—Mottled Javas, Blk. Javas and Silver Duckwing Leghorns. Satisfaction every time or your money back. Eggs $3 per 15 and no reduction. JOHN R. JONES, Suffield, Conn. 39tf

WYANDOTTES.

BUFF WYANDOTTES exclusively since 1894. I haye them as good as grow; and have been winners wherever shown. Breeders and show birds for sale at reasonable prices. Guaranteed fertile eggs from my best pens, $2 per 15. W. P. PRATT, Chatham, N. Y. 02–04

MADISON SQUARE Garden Winners. We have won 1st prizes two successive years at the above show on our White Wyandottes. 1901 won 1st hen, 3d and 5th pullets and 3 specials on 6 entries, 1900, won 1st cock, 3d hen and 2 specials. For the balance of season, will sell eggs at $1 per 13. Booklet free. ALLEN C. ROBERTS, Spring City, Pa. 02–tf

BUFF COCK—Son of 1st cock at Boston 1900, bought of Mr. Dutcher, is offered for sale. Also several prize hens and pullets. Tell me what you can put into birds and I will tell you what I can send you. DR. N. W. SANBORN, Wellesley Hills, Mass. 01–03

"WHO KILLED COCK ROBIN?"—Robbins' Buff Wyandottes are the real Buff with solid Buff wings and tails, and have won prizes in Boston, Cambridge, Rochester, Syracuse, Troy and Poughkeepsie, N. Y.; Brattleboro, Vt. and Philadelphia, Pa. I have all my prize winners in my yards and will sell eggs at $5 per 13 straight. Stock for sale at all times. Satisfaction guaranteed or money refunded. R. B. ROBBINS, Cambridge, N. Y. 42–tf

JOHN LOWE, - Swansea, Mass.

HENS WILL SIT
and do their level best when given the right kind of a nest, the right number of eggs, the right kind of food, the right kind of care and dusted with the right kind of insect powder. For this latter purpose Lambert's Death to Lice fills all of the requirements.

EGGS WILL HATCH
when the breeders are kept free from lice, and when they have daily out door or scratching shed exercise. Under these conditions eggs from healthy birds are usually well fertilized. When good eggs fail to hatch the trouble is often outside of the eggs. Lambert's Death to Lice Powder never injures the fertility of eggs for hatching, the sitter or the little chickens should they hatch in a handful of it.

CHICKS WILL GROW
when started free from vermin and kept so from the shell up. If allowed to become lousy they lose strength and vitality, which will stunt them in growth or cause an early demise. More chickens die every year from this cause than any other, while a little Death to Lice Ointment would save their lives. 73-24

DEATH TO LICE REMEDIES:
Death to Lice Powder for dusting layers and sitters—5 oz. sample, 10c postpaid; 48 oz , 50; 100 oz., $1.00, from here or nearest agency to you by express. Death to Lice Ointment for head lice on children or chickens also scaly shanks on fowls, 10c and 25c postpaid Death to Lice Special, for making a liquid louse or mite killer and for mixing with the regular powder for fleas on dogs, moths, etc., 4 oz., 10c; 16 oz., 40c by mail postpaid. Death to Lice Liquid for spraying poultry houses, painting roosts, etc., (already prepared) 1 qt., 35c; 2 qts., 60c; 4 qts., $1.00, f. o. b. here. Book and "How Best to Set a Hen" sent free. **D. J. LAMBERT, Box 248, Apponaug, R. I.**

First Prize Pen at New York.

"RINGLETS" SOAR STILL HIGHER.

AT THE IMPERIAL SHOW OF THE NATION— MADISON SQUARE GARDEN, N, Y., THE WORLD'S RECORD OF

E. B. THOMPSON'S BARRED PLYMOUTH ROCKS

4 YEARS IN SUCCESSION was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ver accomplished in the annals of the New York Show; Winning during 4 ears in succession MORE THAN THREE TIMES AS MANY 1 ST PRIZES as n y other exhibitor, and as many 1 ST PRIZES as ALL COMPETITORS COMBINED, besides more than twice as many c ups and Specials as all, including the superb challenge Trophy, value $100. for best cock, co ckerel, hen, pullet and exhibition pen; $100 Sterling Silver Cup for finest exhibit, Grand Special Prize Sweepstakes Cup value $100 presented by the President for best P. Rock cock, cockerel, hen and pullet, any variety. My clean sweep of

FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES

on pullets has never been approached in Madison Square Garden, and stands alone and unequaled.

The world's record of 1st on exhibition pen at New York 3 years in succession is the undisputed Champion. With their 1900 record the "RINGLETS" have won at New York a grand total of 77 PRIZES. 31 of these prizes are 1st and specials, being 17 more 1st and special prizes than won by any competitor in the history of the show. Rare bargains in yearling breeders in lots of a trio or 100. Show bird fit to win in the fastest company. Richly illustrated 24-page catalogue on application. Elegant breeders in any number. Eggs from finest exhibition matings, 1 sitting, $5; 2 sittings, $9; 3 sittings, $12; 4 sittings, $15. ADDRESS 91-tf

MUFFED TUMBLERS FOR SALE.

WINNERS IN ENGLAND AND AMERICA.

The grandest collection of winning Muffed Tumblers ever gotten together is now on sale, and can be seen by appointment and birds selected. I will sell any Muffed Tumbler I own and arrangements can be made to take the entire lot. The varieties are Blue Saddles, Black Badges, Black Mottles (Yellow Rose cock, 1st Boston and Chicago, price $15, one of the best living) and several other odd birds, all winners or will produce winners. My Tumblers possess characteristics peculiarly their own, having been bred carefully for years, and are streets ahead of any other strain. In the past five years I have bred more winners than all others combined. Stock birds sold to others have bred their best birds; why, then, waste time and money by breeding from ordinary stock, when for an ordinary outlay the best birds living can be obtained? Those who would like to win and breed winners are invited to correspond. Prices very low, but nothing in muff legs under $5 per bird. (Some as low as $2.50 in surplus Clean Legs.) Testimonials from dozens who have purchased winners in all parts of the country. Satisfaction guaranteed. State wants fully. See winnings at Birmingham, Eng. (1st and medal), Boston, Chicago and New York. While winning here I had a team of six winning at Birmingham, Eng., the greatest Tumbler show in the world, irresistible argument as to the quality of my stock. 48tf

F. W. GORSE, Box 228, Highlandville, Mass.

S. C BROWN LEGHORNS..

My birds are equal to the best. Have won more prizes on a given number of entries than any Leghorn breeder. Circular. free, will prove this. At Boston this year, 3 entries. 2 1sts, 1 3d; at Erie, 1900, 1st pen, 1st cock, 2d hen, 1st c'k'l, 1st, 2d, 3d, 4th pul, $5 spec. 10 highest scoring Leghorns, special best trio, silver cup best ck, ckl, hen, pul, a showing of 121 Browns. Eggs, $2 for 15. 93-tf L. O. BROMLEY, SILVER CREEK, NEW YORK.

Now is the Time you want Eggs

By feeding your fowls a little

BANNER EGG FOOD AND TONIC

your hens will lay lots of eggs, and you can double your profits, as this is the season of the year when fresh laid eggs are scarce.

REMEMBER, this TONIC does not force your hens to lay; it only brings them up to the pink of condition which is necessary for egg production.

TO THOSE who have never used it, we simply ask you to give it a trial, and be convinced.

PRICES: 1 lb. can, 25cts, by mail, 40 cts; 5 cans $1 on board Ex. at New York. 78-tf

CIRCULATION WORLD-WIDE.

The American Fancier

A WEEKLY JOURNAL DEVOTED TO

Poultry, Pigeons and Pet Stock.

VOL. XVI. NO. 403. JOHNSTOWN, N. Y., SATURDAY, MAY 25, 1901. PRICE FIVE CENTS

ADVERTISEMENTS CLOSE TUESDAY NOON.

Winner of 1st at Pittsburg, Feb. 18, '01. She and five other pullets we had at this show were hatched in June All were above standard weight and all laying at the time. During the 6 days of the show this pullet and the winners of 2d and 3d prizes laid 16 eggs. That is why we like them; they are able and willing to lay eggs. This pullet, more than the other two, has the "egg shape"—The others are more typical Wyandotte in shape and we expect them to win over her;—but judge Drevenstedt said: "This one is good enough for me."

We have in our Partridge Wyandotte yards at Beaver Hill Farm FIFTY ONE FEMALES. Sixteen of these have been entered a total of 20 different times this year at seven leading shows, including New York and Chicago, and have won

Eight First, Four Second, Four Third and Two Fifth Prizes, getting left only Twice.

Six of our seven males now mated with these females have, at the above shows, won

Eight First, Two Second, Three Third, One Fourth Prizes in remarkably hot competition.

Busy as Beavers are the Birds on

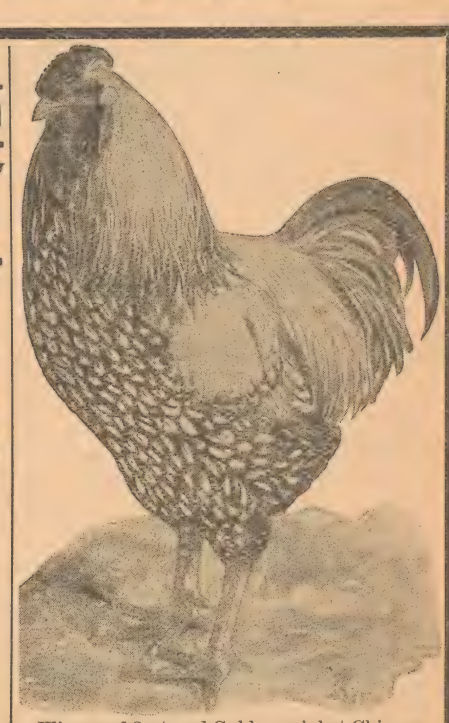
SILVER AND PARTRIDGE WYANDOTTES

AND SCOTCH COLLIE DOGS.

Of these last we now have some fine youngsters ready for shipment.



The proprietor of Beaver Hill Farm began breeding Silver Wyandottes twenty years ago. He helped to make and revise the Standard for them. He breeds the Whittaker strain exclusively and adheres to Line Breeding and Single Mating Methods. :-: His Booklet on WYANDOTTES Free for the asking.....

..Prices of Eggs Reduced for June..

SILVERS $2 SETTING; 3 SETTINGS, $5.
PARTRIDGE $3 SETTING; 3 SETTINGS, $8

A few Breeders of both varieties for sale soon.

BEAVER HILL FARM, BEAVER, PA.

Winner of first and Gold special at Chicago, 1901. Also head of first pen at Pittsburgh.

We have in our ten breeding pens at Beaver Hill Farm, a half dozen male Silvers that we esteem more highly than this one; but he was considered good enough to be worthy of the following:

A FEW OF THE MANY PRESS COMMENTS.

1st cock, good shape, nice silvery bird, firm in wing bars, open laced and clean all through, one of the best handled this season.—AM. FANCIER.

The best Silver Laced Wyandotte cock that we have seen; grand shape and color, an all around good bird.
FANCIER'S GAZETTE.

A cock that is a wonder in the perfection of form and color.—COM. POULTRY.

1st pen one of the attractions of the show; three of these females are exceptional beauties, the other being a trifle darker than the rest. The cock is a grand bird in shape and color, a treat to look at.—[AM. FANCIER'S comments on the Pittsburgh First Prize Pen.

Champions at Pittsburg, 1901....

BUCKEYE CHIEF.

In a class of 162 we won 1st and 4th on cocks; 2nd cockerel, (losing 1st on condition, easily best male in class); 2nd and 3rd hens; 3rd and 4th pullets; 2nd breeding pen and our 1st cock and 2d cockerel were the talk of the show.

AT CANTON we nave been holding the reins for years. 1898, Bridge, judge, 1st cock; 1st cockerel; 1st and 2d hen; 1st and 2d pullet. At Canton, Jarvis judge, 1st cock; 1st hen; 1st and 2d pullet; 3d cockerel; 1st pen. Canton, 1900, Lambert judge, 1st ck; 1st cockerel by error of 3½ points in weight; 3d pul; 4th and best of all, 1st breeding pen. Canton, 1 01, Myers judge, 1st cock, 92½ 3rd cock, 92; 1st cockerel, 94; 3rd cockerel, 92¾ and A CLEAN SWEEP OF 1st, 2d and 3rd PULLETS, 94¼, 93½, 93¼; 3rd hen, 92½; 1st breeding pen 187.

Besides this I have sold the winners for many shows this season.

EGGS I sold last year produced winners! Why not book you for a few settings and for once in your life have Barred Rocks of standard shape and color? Don't hesitate, but send stamp to-day for my illustrated catalogue explaining all.

The Belgian Hare Guide

This book is acknowledged to be the finest and most reliable book out on the Belgian hare industry. It contains complete and practical information on the following and many other subjects pertaining to the industry: History and Origin, The Belgian for Utility, The Belgian for Fancy, The Business and its Outlook, How to Begin, Houses and Hutches, Foods and Feeding, Feeding Green Stuff, Mating and Breeding, Care of the Young Pedigrees, Score Cards and Judging, Belgian Hare Color, Dressing and Cooking, Diseases and Remedies, Preparing for Exhibition, Crating and Shipping, Caponizing, Queries and Answers Miscellany, Belgian Hares vs. Poultry, The Belgian in England, The Belgian in California, Black Belgians and Flemish Giants. It is elegantly printed on fine paper, illustrated with numerous beautiful photo engravings, and is substantially bound. No one interested in Belgians can afford to be without it. Send your order today. **Price, 25 cents**

COLUMBIAN WYANDOTTES

Have 'U' Seen Them?

THE OTSELIC EGG BOXES.....

I make the neatest, cheapest and best Egg Box on the market to-day, for shipping eggs for hatching. Over 10,000 settings were shipped in my boxes last year, and not one bad report. If packed according to directions which go with each box, there is no possible chance for eggs to get jarred or broken. My boxes are made of dressed pine with slide cover fastened with screws, handle on cover and pasteboard fillers on inside, made large enough to allow plenty of packing around each egg.

MY PRICES FOR 1901 ARE:

	PER DOZ.	PER 100.
15 Egg Size.....	$1 25	$ 9 00
30 " "	1 60	11 50

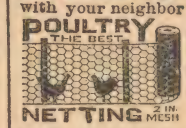
"Profitable Poultry Keeping in All its Branches."

This is the title of the new and elegant Catalogue issued by the Cyphers Incubator Co., for 1901. It contains 224 pages, 8x11 inches in size, over 200 fine new half-tone illustrations and a wealth of interesting, down-to-date matter, covering the subject of **Poultry for Profit** in all its branches.

This is a Brand New Book,



not a re-hash of old ones. Contains special articles written by experts, and illustrates and describes over fifty of America's largest and most successful Duck, Broiler, Roaster and Egg Farms. It also contains the endorsements of over one hundred of the foremost breeders of this country—men and women who are using the **Cyphers Incubators**—and shows photographic views of many of their poultry plants and favorite poultry houses. Ask for Book No. 9 enclosing 10c in stamps, and address nearest office.

SATURDAY MAY 25 1901

From the Editor's Perch.

Editor Morris Davenport, of the Poultry Star, remarks: "Do not neglect the hen. She will pay your grocery bill." If Bro. Davenport will kindly send about twenty such hens up to our office, the "boys" will be awfully glad to try a hen on the grocer.

***

"Turkey Culture" is the title of a new book published by the Excelsior Wire & Poultry Supply Co., 28 Vesey street, New York City. It is the best book of its kind at the price ever published. Practical turkey raisers, including the well known expert, J. F. Crangle, are among the contributors. The price is only 50 cents. It can be secured through the office of the American Fancier.

***

The Live Stock Premium List of the Pan-American Exposition has just been issued. The classification for poultry, pigeons and pet stock is very liberal and up-to-date. A supplementary list will be issued July 1. In the meantime we advise our readers to send at once to Frank A. Converse, Superintendent of Live Stock, Buffalo, N. Y., for the list mentioned above.

***

The poultry specials offered at the Pan-American by various clubs and individuals are not complete yet, but the showing made so far is excellent. Of the associations the National Wyandotte Club alone offers 110 dollars in cash on the different varieties of Wyandottes. Certainly a fine showing when it is taken into consideration that the club show is held in Philadelphia next December. Another feature of the specials offered by this club is: That they are open to all and not to members only.

***

The American Indian Game Club is also very liberal in its offerings of cups and cash specials, and when a complete list of all the specials is published it will reflect great credit on all the specialty clubs and many individual fanciers.

***

Cambridge, N. Y., opens the show season of 1901-2 August 26th. This great fair is advertised as the Pan-American of the East. It is certainly a star function in the poultry division, and efforts are being made to make the poultry, pigeon and pet stock department greater than ever.

***

When our Western representative, H. L. Lamb, stated in the American Fancier that the first big show of next season was the Pan-American Major John L. Cost had a fit. The Major writes: "I notice in a late issue where 'Lamb Chops' says: 'The next show of any importance will be at Buffalo.' Now, that Lamb ought to stray away from home sometimes and wander through the green pastures of the Cumberland Valley, where he will find nestling among the hills of that famous valley a small town of about seventeen thousand inhabitants called Hagerstown, and he will also find that Buffalo is not the only 'can on the dump.' We take exceptions to his opinion." The exception is well taken, and it's "up to" Mr. Lamb to buy the Potomac bass (not White Label or Dog's Head) supper.

***

"Spratts Dog Culture, with a Chapter on Cats," is the latest book and catalog issued by Spratts Patent. It is not only readable but extremely valuable to all lovers of the dog and the cat. Can be had for the asking by addressing Spratts Patent (America) Limited, Newark, N. J.. if the American Fancier is mentioned.

***

The Fanciers' World published by F. M. Simmonds, Jr., has engaged new quarters in Chicago, and all future issues of this journal will be issued there. Mr. Simmonds promises many valuable improvements to his paper and no doubt he will be afforded many opportunities to do so while in his new location.

***

Commercial Poultry, published at Chicago, has opened a branch office in New York City under the management of C. J. Ross formerly editor of the Northern Fancier.

***

The catalogue issued by the Partridge Wyandotte Club of America, is a credit to the members and especially to the secretary, Theo. Haight, Jr. It can be obtained for a stamp by addressing the latter at Astoria, L. I., New York.

***

We notice in the latest edition of the live stock catalogue of the Pan-American that specials are being offered on Golden Penciled Wyandottes. Why is this? The American Poultry Association at Chicago adopted the name "Partridge Wyandotte" instead of "Golden Penciled" and we can see no justifiable reason for placing specials on a variety that is not recognized in the Standard of Perfection under the name of "Penciled" but is recognized under the name "Partridge."

***

In England several writers are heralding the Partridge Plymouth Rocks as something new and wonderful, originating in America of course. While they are not exactly new, they will no doubt find plenty of admirers on both sides of the pond.

***

But why has not some genius succeeded in producing a Golden Barred Plymouth Rock? Such a bird will create a furore, provided it can be bred the counterpart of the favorite Blue Barred Plymouth Rock, excepting of course the ground color which should be a golden bay.

***

Mr. W. Vale, a well-known English authority makes the following remarks in Poultry on feeding chickens:

"I have already said that it is not advisable to feed more than a small proportion of grain, and the products of grain to chickens, but the reverse is the rule. When receiving chickens for post mortem examination I am very frequently told that they have had egg and bread crumbs for the first week, followed by porridge, groats, small wheat, rice and similar unsuitable diets, and I am not surprised at receiving the chickens for examination. I am often met by the remark, when condemning the too free use of the cereals as food, "What about the Scotch who live on porridge, are they not healthy and strong?" Even if it were true that the chief part of the diet of some Scotch folk consisted of porridge these people take no count of that perfect food and the milk eaten with it. Moral.—When making porridge for chickens do not forget the milk."

There is no doubt about milk being a perfect food and the poultry raiser who is fortunate enough to obtain it at a small cost or produce it on his own farm can find no better food for the very young chickens. Still we object to mixing it with porridge. In our experience milk is best fed when diluted one-half its bulk with boiling water. As to porridge we easily find a substitute in rolled oats and pin-head oatmeal. These are fed dry.

***

Mr. Vale further remarks:

"Porridge so made forms a fairly nourishing foodstuff for chickens, but dry oat-meal or groats does not, and when fed to them, together with other cereals or their products, the diet is very unsuitable. Egg or animal matter and juicy vegetable should be fed to the chickens from the time that they are first fed. The egg and the animal matter may both be fed to them during the first week, and the animal matter and juicy vegetable at all times. After the first week some hemp seed, rape seed, tail wheat, or, better still, the screenings from wheat, may be added to their diet. Later on they may have some of the best French buckwheat, which is in color silver-grey, also some small Indian corn. It is an advantage to feed a little of the latter to yellow legged chickens."

As far as feeding is concerned, admitting the truth of the above, we are inclined to doubt the value of small Indian corn as a producer of yellow color.

Transfer.

This is to certify that I have sold all my Silver Wyandottes, including my winners at the last Johnstown show, to R. R. Topping, proprietor of Mohawk Valley Farm, Amsterdam, N. Y.

(Signed), WM. SPOLL.

Johnstown, N. Y., May 18, 1901.

The Cleveland Show.

Editor American Fancier: You will no doubt be interested to know that we have merged the Cleveland Poultry Association into a stock company, capitalized at $5,000, with the entire amount of stock for sale now sold. This movement was found necessary in order to enlarge, modernize and place future Cleveland shows on a plane above that ever before attempted here.

The excellent results had at our show here last season were in the main responsible for this decision, and the management greatly encouraged to place before the poultry fraternity a show of the first magnitude.

The company was incorporated under the laws of Ohio, and we are now ready to do business in a manner which must meet with the approval of all breeders.

The dates selected for the coming show are December 4 to 11, 1901, and Gray's Armory, located in the central part of the city, patronized by the best people of the city, has been engaged in which to hold it.

The score card system of judging has been decided upon, as a majority of breeders in this section of the country desire it.

We greatly desire the cooperation and confidence of breeders generally, that we may work in harmony and give to the exhibitors of the Mid-West a show of proportions equalled only by the best in the country.

The officers of the company are: President, Mr. John Zipp, who is also president of one of Cleveland's largest wholesale houses; vice-president, Mr. Geo. E. Conkey, secretary-treasurer of a large contracting firm of this city; treasurer, Mr. George G. Brown, State agent for Ohio, Pennsylvania and Indiana for the Maryland Casualty Co.; secretary, Mr. F. R. Hunt, of the Hunt Mfg. Co.

The directors of the company, Mr. John Zipp, Mr. Geo. G. Brown, Dr. H. M. Ladd, Mr. Geo. E. Conkey, Mr. F. R. Hunt, together with the stockholders of the Cleveland Poultry & Pet Stock Company, represent some of Cleveland's most conservative and responsible business men, and nothing but what is correct and right will be tolerated.

Cleveland show should be on the list of all breeders as being the proper show at which to exhibit the coming season. The prospective plans of the management for the coming great show will be given from time to time as they mature.

F. R. HUNT, Sec'y,

The Cleveland Poultry & Pet Stock Co.

Cleveland, Ohio, May 16, 1901.

A NEW BOOK ON GARDENING.

The Farmer Company, Philadelphia, have just published a new book on gardening entitled, "The Garden Book for Practical Farmers," written by Mr. T. Greiner. Mr. Greiner has for thirty years been preaching and practicing the gospel of good gardening with marked success, and hence is well qualified for the task. Thirty years of actual soil contact by a man who loves his work and follows it in all its detail with indefatigable patience, means much when it comes to teaching others. In the Garden Book the author epitomizes that thirty years' work in a most entertaining and instructive manner. The man who has a garden, large or small, and the man who intends to have one, will be equally interested and profited by a study of its pages. It is one of those books which inspires its readers to reach out for better results through more thorough work, and is in line with the previous writings of Mr. Greiner, which have done so much to advance the gardening interests of the United States. The book is handsomely printed in clear type on fine paper, containing 129 practical illustrations. The price is 50 cents, postpaid. It is right for every day reading and right for every day reference.

—Pigeon men and hen men should push the American Fancier. Advertisers claim they get better results than from any other paper.

Poultry Work at the Ontario Agricultural College.

[By W. R. GRAHAM, Manager of the Poultry Department.]

(Continued from May 18th Issue.)

HENS VS. INCUBATOR.

There was but little difference in the percentage of eggs hatched by hens or by the machine. The latter gave a slightly higher percentage of chicks. When one wishes to raise over one hundred chickens the incubator will, in most instances, give better satisfaction. The machine requires much less attention than the number of hens required to cover an equal number of eggs, and there is no worry about vermin when the machine is used. Where brooders cannot be secured for rearing the chickens hatched by the machine, little difficulty will be found in getting broody hens to mother the chicks. Hens that have been broody for a few days will take the chickens readily if one or two eggs are removed from the machine just before hatching and placed under the broody hen. When the chicks are ready to be taken from the machine, place them under the hen at night and in nearly all cases the hen will mother them well. Our experience is that it is seldom advisable to give a hen more than fifteen chickens. Where more are given, the weaker ones are usually killed by their more vigorous comrades. We used the above plan to advantage during the latter part of May, when all our brooders were filled with older chickens.

REARING EARLY BROILER CHICKENS.

As mentioned in a previous paragraph, our first chickens were hatched during the first week of February, the eggs having been set January 16th. When the chickens were about 36 hours old they were removed to a hot air brooder, the temperature of which was a little over 90 degrees Fahrenheit, at which temperature it was kept during the first week. The first feed consisted of hard boiled eggs (chopped fine), bread crumbs and finely chopped raw onions, in about equal proportions. This was fed for the first four or five days, after which they were gradually weaned from hard boiled eggs to cooked liver (chopped), and, to a certain extent, from bread crumbs to a mixture of grain in equal proportions of bran, oatmeal and cornmeal, slightly moistened with skim milk, care being taken to avoid sloppiness, and a little grit being added occasionally. By way of variety, the onions were at times omitted, and, in their place, root sprouts and sprouted grains were used. Our aim throughout the whole period was to feed nearly equal proportions of animal, green vegetable and grain foods.

After the chicks were ten days old, they were induced to take exercise by feeding cracked wheat or millet seed, scattered in cut straw over the floor. Good pure water was at all times in easy access. They were fed five times a day in just such quantities as were readily consumed. The chickens were occasionally driven into the open air because of our conviction that more or less fresh air is necessary to the production of strong, healthy chickens.

These chickens were all successfully raised and were exceptionally thrifty. A dozen were killed on May 4th and shipped to Toronto, where they were sold at $1 per pair. At that time their average weight was about one and one-half pounds each.

Later in the season (up till 9th June) some more broilers were shipped and sold for the same price, viz., $1 per pair. The shipment sent on the 9th of June brought 80 cents per pair.

REARING AND MARKETING DUCKS.

Our first ducks this year were hatched April 20th and sold July 5th in Toronto by a commission merchant for $1 per pair. These were of the Pekin variety and weighed when dressed nearly nine and a half pounds per pair. Another shipment was made July 17th, which sold for 75 cents per pair. This shipment was equal in quality to the first shipment, the difference in price being caused by the amount of a similar class of fowls offered for sale at that time.

Feeding.—The ducks were fed on a mixture of equal parts of bran, corn meal and ground oats, moistened with skim milk. About twice a week grit was added to the feed in the proportion of about one-half pint to a peck of grain. This is necessary to secure good digestion of food. Water was given for drinking purposes only, as ducks grow much faster when not allowed to swim in water.

Breeds.—The Pekin variety proved to be the best market duck. They mature earlier than other varieties, and having a creamy white plumage they present a nice appearance when dressed. The Cayuga was, on the average, one-half pound less in weight after nine weeks' feeding. They are also inferior to the Pekins when dressed, being somewhat dark in appearance, owing to having black plumage. Their flesh, however, is said to be of superior quality, having a better flavor than that of the other breeds. The Rouen ducks were large when matured, but grew rather slowly, not weighing over eight and one-half pounds to the pair when nine weeks old. Their colored plumage is also a disadvantage when they are dressed. A cross between the Pekin and the Rouen was tried, but proved to be but little superior in growth to the Rouen. It, however, dressed better in appearance, owing to the large proportion of white in the plumage. The Pekin drake was mated with high grade Rouen ducks. The dealer in Toronto pronounced the Pekin the most desirable market duck.

The Old English Five-Toed Fowl.

ERRONEOUSLY CALLED THE DORKING.

When I wrote about the Old English Game fowl I fully intended saying at least something about another old English breed when opportunity offered. Like the former, the latter is a fowl of sterling merit, of undeniable high qualities as a table bird, massive in make by comparison with others, big, full breasted and well proportioned; though broad and thick, still of showy and good carriage, well feathered, with large wings and tail, short legs or shanks, and feet with five toes It is a stately, well favored bird, that cannot fail to attract the admiration of the amateur fancier, the farmer who is a lover of good stock and looks to the marketable value, or the ordinary higgler who ranges far and wide in search of poultry of fine quality, for which there is always a ready sale, and with it a good price and proportionate profit. For such reasons alone, if for no other, although I have during a long life kept almost every variety and breed, yet I know of none for general commercial purposes that equals the old Kent and Sussex five-toed fowl, commonly called Colored, Grey, or Red Dorking, much less surpasses it.

True it is, from time to time, ever and anon other breeds, mongrels and cross-breeds are lauded, boomed, and each and all said to be of superior merit and more wonderful in all respects. Yes! marvellous fowls in many ways, and in as many instances there is some truth in these numberless assertions, and though admitted as true, may not as much, and in some cases even more, be said for the grand and noble looking Old English breed as of any? I think so. Our southern beauties as commercial table fowls still hold their own.

Also, it has been and is still said that the Dorking(?) is tender and difficult to rear. This, no doubt, is so with the treatment given by some, and it is indeed wonderful that chickens of any breed thrive at all or more than barely exist with such uncultured usage and ignorance of their nature, wants and requirements. It would be interesting to know how many hatched Dorking chickens Mr. Herbert Reeves, of Emsworth, loses in "the bringing up" as compared with those vaunted varieties of fowls kept by other fanciers. I should be in no way surprised to hear that his chicken mortality was less than that of the keepers of boasted "hardy birds."

My own experience of the Dorking (so called) has been long and wide. In my younger days I have seen long rows of coops near to and about the farm homestead, each with a hen and usually with eight to fourteen chicks taking new life about the grassy meadows or pastures. There were no artificial rearers then, but the natural one. The hen had such throngs of "little ones" as would astonish the "progressive" fancier of today. Ask any of the farm henwives then if their fowls were delicate and difficult to rear, and the invariable answer would be: "No, not with the proper and due attention." If anyone starts with the idea that all poultry is to be treated alike, there is more than a possibility that his or her failures would be numerous. The ways, habits and constitutions of the various breeds differ widely; the novice must learn this, but the one of long observing experience knows it. In 1851–2 I kept Shanghais and also Dorkings. Did I attempt to rear the chickens of both in the same way? Certainly not. I sat amongst the new comers hours and hours, taking note of all their habits and what food they liked best, and I found that they might have and thrive on entirely different treatment to my Dorkings(?) and Game, and they had it, did well, and finally were bought for, and all were sent to, America. I merely mention this in passing. Treat a Dorking as it should be, as a bird, and it is not a tender variety to keep about the farm, but it is a highly profitable one. At least I have always found it so, and that for over sixty years.

I have no intention in these notes of drawing any comparison between our old English fowl and this of today. I have carefully watched the vicissitudes of the breed for more than half a century and can safely say that at no period do I remember the Dorking at a lower ebb as to truthful quality than in "the eighties," and the improvement since this has been and is deserving of praise, especially in the Silver Duckwing Greys, and of these Mr. Herbert Reeves has been the most successful—marvellously so.

The Dorking was always a fairly good winter layer of pure unglossed white oval eggs. These were large, good in flavor, and, what is more, usually hatched well. With snow on the ground the hens would lay, while other hens were resting(?). One hears of breeds, cross-breeds, and mongrels that are said to lay up to 300 eggs in a year. It is possible, yet I have never known it by experience to be fact, but have had Dorkings lay as many as 180 and been more than satisfied with the ultimate results. There are those I know that will upcry the new and there are all those who love the old proverb of "let well alone." I am of the latter, and say, and fully believe, that for general purposes there is no breed like the old Kent and Sussex five-toed fowls, so-called Dorkings, and if another, then the Game for a "luxury." But if a colored egg is wanted, then of all breeds the naturally proportioned Black Langshan is preeminently first of all other varieties.

Of colors, they were originally bred to please the fancy of their owner, as were the Old English Game, and were of almost every tint save and excepting black, though I have seen some nearly so, and if not quite, having hens myself that were black, with only a little dark gray on the upper part of the breast and the midribs of the back feathers were white. These had the very whitest shanks, feet and toe nails that could possibly be desired and which is so distinctive a peculiarity of the breed. The Old Gold and Gray White Spangles were beautiful in the extreme and the Black Breasted Red had a splendor of their own that had to be seen to realize, while the Old Gray, with their black-tipped feathers and white feather shaft, were in their way charming. And the Whites, though somewhat less in size, are beautiful now, though the single combed birds are discarded. This I regret, as they were more in my favor than the rosecombs of today.

But what is still more regrettable is the extinction of the old breed of rose combed colored birds. These were always more massive than the single, and some would have six toes and even more and would occasionally be "double spurred." Not that this in any way helped to their usefulness, for it did not, but it was to a degree some proof of the excessive growth gained by domestication, nor were these so excellent as layers of such large white eggs as they of lighter build. Would that I could now again see such fowls in our Kent and Sussex farmyards and about our homesteads, where now instead roam mongrels and cross-breeds, with big bones and of almost every hue of feather and shank color, with flesh and fat varying from light gold to orange; some "trousered," as they are locally called, and others not so. No! for a certainty and for success, I am quite clear of one thing, and this is that the pure old breeds are far away the best. And of these for quality and high class prices and ready sale, the old Kent and Sussex pure bred breeds, carefully selected, mated and bred with judgment, are of the very best. And as they cluster about our haystacks, our farmyards, or sun themselves under our hedgerows, they look English and a veritable part of the home "belongings" and not as foreigners, as those fluffy, loose feathered and short tailed importations, though they, for reasons best known to themselves, are said to be preferred by some persons even for commercial purposes. And for this, in some localities, doubtless they have their peculiar advantages, but for its size and high quality for the table I have never seen any fowl approach, much less surpass, the grand old English bird, the old Kent, Sussex and Surrey five-toed fowls, the so-called Dorkings.—Harrison Weir in Poultry, England.

Stearns New Model No. 7
Ball Bearing Bone Cutter
Back Geared Three to One.
It is geared to save power, making it the easiest running, fastest cutting bone cutter ever built. It will cut anything a fowl will eat—green or dry bone, gristle, meat, corn or vegetables. Self-regulating. *It cannot be clogged.*
Green cut bone brings the young chick to maturity quicker than any other food. Our book, "How to Make Poultry Pay," explains how and why. Sent *free.*

E. C. STEARNS & CO.,
Box 12, Syracuse, N. Y.

The Cambridge, N. Y., Show.

The Cambridge show will be held August 27, 28, 29 and 30. Increased premiums and coops will be offered and provided in the poultry department. H. D. Qua will act again as superintendent. J. H. Drevenstedt and Sharp Butterfield have been engaged to judge the poultry.

CAN'T KEEP CHICKENS WITHOUT THE AMERICAN FANCIER.

No use trying to keep chickens without the American Fancier.

B. E. WHEELER.

Clark's Summit, Pa., May 16th, 1901.

A Practical Poultry Association.

Only four months ago the poultrymen of Maine were considering the question of forming a state poultry association and with quite a number the question was whether such an organization could be made a success and hold an annual exhibition. Grave doubts were entertained by some of the fanciers and breeders while others felt that if a start could be made, we should in the course of the year secure a membership that would warrant the name of a State poultry association. The most courageous among us did not anticipate the success that is now clearly in sight, while even yet we have made but a beginning in the great work that is before us, for our state must be made to produce more of its poultry and eggs, and the distribution of thoroughbred stock, and the awakening of hundreds of poultry breeders to the advantages thereof, as well as the dissemination of a knowledge of the best methods of management, feeding, etc., are among the objects of this organization.

This organization has been duly incorporated under the laws of the state of Maine, under the name of the Maine State Poultry and Pet Stock Association, and has chosen the following officers: President, Charles L. Cushman, Auburn; vice president, I. V. McKenney, West Auburn; secretary, George P. Coffin, South Freeport; assistant secretary, A. L. Merrill, Auburn; treasurer, H. C. Day, Auburn. The first exhibition will be held in the City Hall, Lewiston, December 17th to 20th, 1901. The poultry judges chosen are Messrs. A. C. Hawkins, D. J. Lambert and W. B. Atherton. Liberal prizes will be offered on all varieties of poultry, and particular attention will also be paid to the utility side, and the display of dressed poultry and eggs will be an interesting exhibit. There will also be literary exercises consisting of lectures and practical talks by the most skillful breeders in the country. Certain lines of experimental work will be undertaken and object lessons of great value thus brought out. In short the exhibition promises to be of great importance to every poultry breeder and farmer in the state and deserving of the liberal patronage it hopes to secure.

But there is other work that the association is doing that is of incalculable value to the state, the free lectures and talks that are now being given by some of the members, who are thereby interesting people who have not been hitherto engaged in poultry raising, and awakening in others the desire to raise better stock.

The first of these lectures was delivered at Y. M. C. A. Hall, Lewiston, March 21st, by Dr. G. M. Twitchell of Augusta. Dr. Twitchell is an able and interesting speaker and successfully handled his subject, "The Poultry Crops of 1901." The following is an extract from the lecture:

"In the minds of the public, the poultry industry is looked upon as a trivial matter, but it is, like every other business, made up of little details aggregating tremendous results. Official estimates give us the value of eggs, 175 millions; dressed poultry, 130 millions; live poultry, 150 millions; or a total of 455 millions annually for this country. So that in considering the industry, we should attempt to grasp its magnitude. To the state of Maine it means two and a half millions yearly for eggs and poultry, and we are yet in the infancy. We have not opened the door to the possibilities of the business. If that door is to be opened, it must be by an appreciation of the present demands.

"Hens were created solely to perpetuate the species—which means one or two clutches of eggs yearly. Man has reconstructed the animal, until to-day our flocks yield two hundred or more eggs per hen—wholly unnatural, wholly artificial and abnormal, and yet to be largely in the future, as men with large conceptions, clear ideals and a dominant will, direct the currents and increase the functional work of the intricate machine wrapped up in the little body. As with all other classes of stock, the whole thing is involved in the thought of the objective mind working upon the subjective. Herein lies the secret of success in all nature. Man was pleased here to have dominion, and that dominion comes only through his ideals, out of his enthusiasm by persistent application. The forces of nature may yield unconsciously and consciously to his clearly defined purpose.

"All this renders necessary breeds and especially families. The work of the fancier is to establish breeds, to fix traits, to create tendencies and direct them into habits, that size may be increased, egg production multiplied, and profits realized by the grower. Doing this, the fancier becomes a public benefactor, serving others as he serves himself. The state of the future is to be the state of individuals; breeds are what we make them. Families represent individual ideas. If your desires are for a flock yielding two hundred eggs or more, begin now, select your best layers. Type governs purpose. One thing never to forget is that you can force meat production, but eggs come only by invitation. You are dealing now with nervous energies, nervous functions; and while the body does the work it is the brain of the hen which directs. And again, the necessity for the objective mind of the owner, with its large conceptions, becomes absolutely necessary to direct the energies of the animal. If you want two hundred eggs per hen, then breed from great producers. Grow twice or three times the number of chicks wanted and apply the weeding process. Weed by type. Weed also by the Standards of utility. Study your flock, become familiar with your hens; know which are producers. Kill every inferior bird; keep nothing but the best. Aim for a high standard of quality in each individual animal, and for the greatest possible average in the flock. Establish your reputation for quality in all the goods you manufacture. Advertise freely and impress upon the public the value of the work you are seeking to do. Get into your exhibitions and provoke competition, for out of it will come a clearer conception of what is involved in this great industry which is yet to bring wealth to the lovers of poultry.

"In breeding, select that variety which suits your fancy and nothing else. Never run contrary to your fancy, for out of that alone can come the ideals which inspire courage and enthusiasm.

"One thing more. In putting your goods upon the market, remember that the only standard to be taken into account is that of the consumer—his palate, his taste, his fancies, must dictate, and your conception of merit or quality has nothing to do with the case. Fit the market, not fight it. Doing this, increasing the flocks, multiplying the numbers, putting business into the breeding, the poultry industry becomes one of the great industries of the state, and we stop this tremendous drain of capital going out to supply our hotels, boarding houses and summer resorts. We bring wealth to the growers all over Maine, and out of it will flow prosperity to all the people."

The second of these meetings was held at the home of President Cushman, and was in many respects a new method of studying the science of incubation. By means of a fine stereoptican and calcium light, eggs were examined in the various stages of incubation from the twelfth hour to the seventeenth day. Many of the eggs were also broken in saucers that the visitors might observe the appearance of the egg. The whole was explained by Mr. Cushman who by this unique method has made many experiments along this line. The speaker referred to the necessity of testing the eggs, and also of determining the fertility of eggs laid by individual hens and of the uses of the trap nest. He also brought out a ten pound capon to show the quality of the flesh, etc. He has experimented considerably with capons and finds it profitable to caponize them for the purposes of securing the plump growth, even though they are marketed as roasters.

Mr. Cushman then explained that the object of these meetings was to advance the interests of the State Poultry Association. We want this industry to centre in Lewiston and Auburn. We must develop the industry and get up a reputation for good fowls. We must also educate the people on these subjects. Most people who keep hens know but little about the scientific side of the question, and do not understand its economies. We must get together and study to evolve this whole breeding problem. We want assistance and we want you all interested. We want you all to become members of the association. We shall have experts come here from time to time and take up different branches of the subject. Some will talk on trap nests and some on other subjects. Every branch will be fully covered. We are not doing this work, said Mr. Cushman, for the fancy breeder, but for the benefit of the man and woman who earn their bread by the business. To day the poultry business has a splendid prospect in Maine. Our state is fast becoming the summer resort of the nation. Our great summer hotels are now obliged to send to Boston for their poultry and eggs. This is all wrong. You must supply them. This Association and this business will surely succeed, but we want your assistance.

Dr. Twitchell then showed the audience the "inside workings" of the poultry business by dissecting a laying pullet. Nature, he said, had made a form for every animal, but man had changed many of them. In the natural state of the primitive hen, when their food was largely composed of grubs and worms, there was no trouble about reproduction as the eggs were generally fertile, but since the fowls had become domesticated and subject to the care and feeding that is generally bestowed upon them by their owners, regardless of the natural breeds of the hen, the fat that is packed inside the fowl obstructs the workings of some of the organs and especially those of reproduction.

All the internal organs of the fowl were shown, and each in turn was explained. The entire oviduct was removed and cut open and placed under a microscope to show its structure and the formation of the egg. What appears to the naked eye as a membrane is shown to be a mass of minute yolks, which in the course of time are to be developed into eggs or (if the development is continued by incubation), chickens. This, with Mr. Cushman's demonstration, was a grand object lesson not only of the science of incubation, but of the development of all animal life, which follows on the same system.

As one observed these changes and listened to the able explanations, the only question that seemed to lack an answer was that old one of "what is life." And while none could answer it, and as all could observe some of the mysterious workings of that potent force, it led all to have a greater respect for the hen and her products, and taken all in all was an object lesson not soon to be forgotten by any of those present.

Mr. Cushman by his interest in this organization, is doing much for the poultry interests of the state and deserves great credit for the work he has done, and the hospitality shown in extending a general invitation to all interested in poultry to attend this meeting at his beautiful home. He is leaving no stone unturned in the effort to make the coming show the largest in New England, outside of Boston, and in many respects the best poultry show ever held.

The membership book is still open and the secretary would be pleased to hear from any one who wishes to join the Association. Two dollars pays for membership fees and a year's dues. Every poultry breeder in the state should lend his assistance in carrying out the work that is now being planned, for in so doing. we can help the great poultry interest in our state, as well as helping our fellow workers.—The Poultryman and Pomologist.

One of the rarest of the Rare Deposits yet found in the bowels of the Earth.

DIAMOND FLINT. Nature's blending of Grit, Lime and Phosphoric Acid, not to be excelled for Digestion of Food in Fowls and the creation of egg shells, adding vigor to the strongest of your flock.

Scientists claim this deposit to have been formed more than 5,000 years ago, and it is recognized by them and the natives, who have been using it for more than 100 years for their Poultry, as one of the most valuable products of the earth yet discovered for any and all kinds of fowls—Second in Hardness to Diamonds Only, hence the name "DIAMOND FLINT," tho formed of a heterogeneous mass of shell-fish and shells from which a milky substance flows when first exposed to the air. Does away with all need of oyster shells. Instead of buying a ton of oyster shells and a ton of ordinary poultry grit, order a ton of DIAMOND FLINT and you have all the properties to be obtained in both the others, and many other beneficial qualities not contained in either, at a great saving of time, labor and money.

M. S. Gardner's Plymouth Rocks.

Editor American Fancier: A few days ago I spent a day with my friend, Mr. M. S. Gardner, the Barred Rock specialist, and thought it might be interesting to the readers of the American Fancier to hear something of the man at home and of his poultry plant. As I drove in I was made welcome by the remark of "hello there, Lamon," and after taking care of my horse, started in to see the birds. I might mention here that Mr. Gardner is still limping around on account of not being able to get cured of rheumatism, which has bothered him the past winter. Probably many of your readers will remember when he was at the New York show that he had to use a cane to help himself about. Well, as I said before, we started in to see the birds which are housed in seven different buildings strung out nicely over the farm, each pen having a fine large grass run. In all he has about three hundred birds, and I did not see a sick one in the flock, and as regards to the quality, I hardly need speak of it, as it is well known that as a Barred Rock breeder Mr. Gardner stands second to no man in America to-day. Every bird on the place traces directly back to a first place New York or Boston winner, and they look every inch of it. When you think of it, Mr. Gardner has won every first on male birds at New York during the last three years, and five out of six under such judges as McGrew, Zimmer, Rockenstyre, Drevenstedt, Bridge, Scudder and Butterfield at other places including Johnstown and Boston. Will anybody question that his birds are among the very finest to be found anywhere on this continent? It would be impossible for me to have handled all the birds on the place, but among the ones I did were the 2d Boston cockerel "Pilgrim" 1900, the sire of "Pioneer" 1st at New York 1901, and "Pathfinder" winner of 2d at New York same date. I also handled the mother of the above New York winners, and I believe she is the best cockerel bred female I ever saw. "Pilgrim" is holding his own in splendid shape and is fit to show anywhere, and in regard to "Pioneer" I will here state what Mr. Bridge said of him at Johnstown when he scored him 94, "this bird is not matured but he has the best wing I ever saw on a Barred Rock male or female, he is simply grand, a winner anywhere." Then there was the 4th New York cock, 1901, fit to show again, one even shade all over and barred to the skin, and if I am not mistaken the cockerel that was in Mr. Gardner's 3d prize pen at New York last winter will make them all hustle as a cock. There are not many better ones. In closing this article I want to give the readers of the American Fancier a little tip. Mr. Gardner told me he wanted to cut down his stock on account of his health and I know just what I am talking about when I say this is a grand chance to get some good ones reasonable.

HARRY M. LAMON.

Watertown, N. Y.

A Day With Mr. Herbert Reeves' Dorkings at Emsworth, England.

Dorkings and tulips everywhere. Tulips in the spring flower borders which circumgirt the spacious lawns. Tulips in the hall of the most artistic and truly delightful residence, tulips in the reception-rooms, tulips in big gay bunches on the luncheon table. Broad bandeaux of tulips to cut from in the kitchen gardens, the flowers in the latter place being in profusion, red, yellow and white, and after an April shower the blossoms exquisitely scintillated, like miniature electric lights, in the bright spring sunshine. Tulips and Dorkings everywhere, for where there were not tulips and flowers there were Dorkings. Dorkings, silver-grey and colored, all over the paddocks, grass runs and plantations, woody enclosures and farm buildings. Dorkings, once more, everywhere.

This was the delightful spectacle which met our gaze when interviewing Mr. Reeves on April 12th last. It is some six years ago since we had the pleasure of visiting Northlands, for that is the name of the beautiful residence belonging to this Dorking king. We then gave in these columns a short description of the yards as they existed in the springtide of 1892. With six years' growth of the numerous shrubberies and woody enclosures, which are composed of choice conifers and other non-deciduous trees, the surroundings have marvellously improved, so much so that we can certainly now pronounce this to be an ideal English home, one, too, where in conjunction with Mrs. Reeves, kind and unstinted hospitality abounds. Yes, that was truly a delightful and most enjoyable Tuesday which we spent at Northlands on the day following the last Bank Holiday.

Mr. Reeves has seceded from the White Dorking variety, which we consider to be a great misfortune to the breed, since the Whites are apparently losing several supporters year by year. In Silver Greys, however, as also in the colored variety, this exhibitor is most brilliantly to the front. To win last November at the Great National show, as this fancier did, cup first, second, third, fourth and fifth in one class with Silver Grey cockerels alone was, indeed, a magnificent and unique performance. By the way, the cockerel figured on our front page was one of this illustrious five. This bird, which is a marvel of symmetry and true Dorking characteristics, was the first and cup Birmingham winner. He was second at Sydenham, but his brother, Mr. Reeves' challenge cup winner at that exhibition, having been sold, the two brothers met at Bingley Hall, and there the honors were transposed and the Palace victor had to take the second place in fresh hands. Still they were about as grand a brace of Silver cockerels as ever were penned, and no one can deny the fact. We must, however, hark back a bit. On our arrival we first visited the block of buildings utilized in conjunction with this big Dorking establishment. There was an egg and box room where Mr. Reeves has his own cases made. All was in perfect order, timber and tools all having their proper places. We do not remember that we have heard before of an amateur egg vendor making, upon the premises, his own egg-boxes. After this the incubator room. One machine used for the first and only time this season, contained fifty eggs, shortly to hatch out. Mr. Reeves assured us that he had almost finally discarded incubators, having used hens exclusively this season for hatching his choicest eggs. Broody hens, he told us, he could always obtain in plenty from the neighboring farms. We next visited the meal room, and here all was done in a most business-like and methodical manner Every hundredweight of meal or corn is weighed and sampled before being consigned to the bins. Here, too, was horseflesh to hang up in the enclosed runs, wherewith exercise is provided for the birds by jumping up to pick at the savory *mo ceaux*, as well as animal food. After this we started for a thorough inspection of all the Dorkings. We first came to a fine row of eight grand runs of great size, all *en bloc*. The sides were highly boarded up to prevent any fighting or draughts, while the houses and all the woodwork shone brilliantly under the influence of bright black varnish. In the first there was a Colored cockerel and nine hens. The former was a grandson of the well-known "Masterpiece," the hens being all winners; among them being the champion cup pullet of 1896, and winners at Redhill, Boscombe, etc., in fact, all over the country. They formed a real picture of beauty and good health, while not a flaw was visible in one of the birds. In the next pen was the second Redhill Colored cockerel, accompanied by nine beautiful mates, in fact, nine more excellent young hens could rarely be found. These had been purposely selected for breeding from, out of the owner's great flock which he bred in 1897. Then followed a pen of Silver Greys. Here was a massive, big bodied cock, with splendid feet; he has never been exhibited, but has been kept for breeding purposes only, surely a most wise proceeding. This bird had with him seven pullets of exquisite color. Robin breasts, too, they had of the most charming tint. In No. 4 of this row of pens we again found a grandson of "Masterpiece," the latter having been bred by Mr. Padwick. He was wonderfully massive in body, with very good legs and white feet. This bird, Rufus, the very smart and courteous manager told us, was the father of all the January and February chickens. Truly has he proved himself to be a good stock getter, but more of the younger fry presently. In the fifth enclosure were once more Silver Greys. Here was the cockerel third at the Crystal Palace, first at the Royal and first at Birkenhead. The cockerel is well known to all Dorking exhibitors, but he has vastly improved since the Sydenham meeting. He had with him seven good hens, including one which won first at the Royal as a pullet, first Tunbridge Wells, etc. This typical bird figures on this page and is a perfect gem. Mr. Ludlow has made a fine portrait of her. Of the other six companions we may probably have seen, individually, larger birds, but for quality and color *en bloc*, never. Pen 6 had Silver Greys once more. Among this group was the winner of the special at Boscombe, with many other well-known winning birds. Enclosure No. 7 was occupied by a very fine half-score of home-bred colored hens, being almost wholly of pure Reeves' blood. They were a grand lot, and have this season thrown some very excellent chickens. The last run of the series once more contained Silver Greys, the cockerel being a great winner, including among his triumphs first at Chichester last year. With him were some grand hens, all so good that it seems invidious to select any special one for mention. We were particularly attracted, however, by one, and found on inquiry that she gained first at the Bath and West of England show in 1897. We may add that among this vast array of breeding Dorkings all were in the pink of condition. Moreover, we did not notice one bad-footed bird, one wry-tailed one or one unhealthy. This block of runs was planted with choice fruit trees, which annually yield, we were told, a good profit; affording at the same time ample shade and shelter for the inmates. This was as fine a row of enclosed breeding pens as we ever remember to have seen.

Next we visited a big batch of Single cocks and cockerels of both varieties, which were placed on one side for exhibition later on or for sale. Among them was a Silver Grey with his hackles the color of a newly-minted crown; then another almost ditto, after that we noticed a particularly fine colored bird. Next followed a grand old colored adult, one who had done much good work in the past, among his varied honors being 1st and challenge cup at the great National show as a cockerel, then exhibited by Mr. Padwick; and lastly, in another compartment, was a most beautiful Silver, with the most perfect head points and delightful color. This bird has never been exhibited, but is being held in reserve to be, all well, produced as an adult during the coming autumn, a proceeding we most highly approve of. We afterwards came to a well-shrubbed paddock, with excellent and sweet pasturage, in which was a group of hens—Silver Greys and Colored. Some were eighteen months of age and some pullets of the past season. These were for purchasers at any time to select from, and really we saw but little difference between most of this goodly collection and the choicest of those in the breeding pens. We believe that it is an open secret that Mr. H. Reeves has sold nearly £500 worth of Dorkings and eggs since Christmas last. How now about the decadence of the Dorking fancy? Dorkings will always be popular. The most radical and progressive of Englishmen will always uphold the Dorking and Game fowls of the old country. We shall never see them extinguished. The huge and increasing classes of the former at the Great National shows and of the latter at Bingley Hall, amply demonstrate the fact.

Here we must pause, for this week, in our description of perhaps the most unique Dorking yard of the Colored and Silver Grey varieties in Great Britain. We may add, however, that we consider that Mr. Reeves was exceedingly shrewd in purchasing all Mr. Padwick's stock of the Colored variety when last year it was in the market. We saw quite enough of the young stock at Northlands to see that the two strains have blended together in the most admirable and useful manner, and this truly is well! Just one more interesting fact we may here mention. Through an advertisement in our business columns Mr. H. Reeves had an order for five dozens of Silver Grey eggs. These hatched so well that another order followed for five dozen more, and then once again another cheque was forwarded and five dozen more eggs were ordered, making in all fifteen sittings to one purchaser. Verily, we thought on hearing this interesting fact, "advertising, indeed, is to trade what steam is to machinery."

Continuing our survey of this great Dorking establishment, we were next taken to a cluster of runs forming a fine block of seventeen enclosures, all beautifully grassed and the walks gravelled. We were very much taken with the red glazed waterpans, for they had such a bright and fresh appearance on the green sward, and were sufficiently heavy as not easily to upset. We have not space to particularize the inmates of all these pens. We may, however, mention that in compartment one we found another grandson of the celebrated "Masterpiece" with four large hens, possessing deep keels, very rich color and the whitest of feet. In enclosure two was the fifth Crystal Palace cock of '96, white as alabaster in feet. He had running with him a champion winner and two other hens of great beauty. Victors they were at Newport, Carmarthen, etc. Following on we noticed a Colored pen of great merit, the cock weighing, we were told, twelve pounds, which is a great weight for a breeding bird at this season of the year. All his hens were of good color with excellent feet. In the fourth compartment was an enormous Silver Grey cock, pure color with perfect legs and toes. He was mated with 3 very fine hens of superb quality. The fifth run contained more excellent specimens, including the cockerel first at Henley-on-Thames, first Wisbech, etc. With him were three home bred hens, weighing just upon 10lb. apiece. In run No. 7 was the cockerel which was illustrated on our front page last week. As before mentioned, he won the cup at Birmingham over his brother, the Great National challenge cup winner, the latter being exhibited at Bingley Hall by his new owner, Mr. Fitton. For a description of the perfect points of these two birds we have only to refer our readers to the reports of the Dairy Show and the Crystal Palace and Birmingham exhibitions, as recorded in the Stock-Keeper in the autumn of 1897. In another enclosure we found the father of the celebrated quintet of Silver heroes, and once more this illustrious bird has proved the father of a fine team of youngsters this present season. In another pen adjoining was a perfectly colored cock of 1897 very similar to the bird which graces our outside page this week, the latter being a great winner, including second at the Dairy Show when he was hardly ready. With the first-named were four fine big bodied hens, of even color. They had never been exhibited, their owner said, being kept for stock. Still they were fit for any show pen. Following on these was a pen of Silvers, including eight sisters to the challenge cup Great National winner and his four remarkable brothers. They were, indeed, a goodly lot to look upon, ruddy in breast, clear in color, low on the leg, and sound in feet.

We then passed on to the chickens, and once more Mr. Reeves is to be congratulated, for indeed he has a splendid array of both colors of all ages. Taking them as we came to them, we first found a score of Silver chicklets, in two broods, cooped on a most beautifully cut grass plot under the shelter of pine trees. Wherever conifers do well so do Dorkings, for they both revel in a sandy and dry soil. The coops Mr. Reeves uses, we noticed, had wooden floors, which were kept very clean, being dusted very frequently with sharp grit and small gravel. All over the place we found troops of young Dorkings in various stages of growth, and their owner had the satisfaction of telling us that he had not had to have one killed for malformed feet or crooked bodies. We never saw chickens in a more healthy and thriving condition, and we believe that the secret of this success lies in the fact that the birds are never coddled, but simply fed with the most nutritious and best of foods in variety. This, combined with absolute cleanliness and an unlimited supply of road scrapings, in which the youngsters revel by pecking, dusting and basking, undoubtedly accounts for the excellent condition of Mr. Reeves' flock of young birds.

We then followed the manager to an enclosure where were some older birds of both colors. They were hatched on the last day of January, and are consequently now just three months old. They all had admirable feet, white and well clawed. One cockerel we particularly commented on, and the manager said that it was the best bird that he had ever bred, or, in fact, had ever seen at that age. Then we came to some earlier hatched chickens still, for they were born on New Year's morning, and among them were some rare Silver pullets for quality—chickens which, we fear, would make many a Dorking fancier break the tenth commandment to possess. There was also here a great bodied, massively built rare colored cockerel, beautiful in feet and low on the legs—a bird he was that, all well, should have a fine career. These youngsters certainly displayed, for early chickens, the greatest merit. Then we came once more to another fine batch of chickens running under the protecting shelter of a big belt of conifers. Here was a Colored Dorking cockerel only just three months old which turned the scales at four pounds —a bird moreover quite full of quality

DOWN A LITTLE FOR JUNE.

The demand for Silver and Partridge Wyandotte Eggs at Beaver Hill Farm has been heavy. We have returned dozens of orders that we could not fill at our regular prices, $3 per setting for Silvers and $5 for Partridge eggs.

In response to numerous requests for lower rates later in the season we have decided to name

THE FOLLOWING LOW PRICES FOR JUNE:

Silver Wyandotte Eggs $2 per Setting; 3 Settings $5.
Partridge 'Dotte Eggs $3 per Setting; 3 Settings $8.

Orders for eggs at these special prices will be filled in the order received.

A majority of our famous prize winners the past season were hatched in June.

A few Breeders of both varieties for sale in June
A good time now to get one of our fine Collie Pups

BEAVER HILL FARM, :-: BEAVER, PENN.
T. E. ORR, Prop. W. D. POOLE, Supt.

and of much promise. There was also an exquisite Silver cockerel with hackles already shimmering with the purest color. We followed Mr. Reeves next to a delightfully shaded paddock near the railway line. No young birds could desire a more charming home than they had there. Shade, shelter, grass, water, all were to be found. Chickens, Colored and Silver Gray, abounded. Some were raking in the sandy soil; some were perching on the low boughs of the young trees in happy mid-day rest; some were preening their feathers with expanded wings in the rays of the noon-day sun, and some were making little expeditions into the shrubberies grub and worm seeking. This was, indeed, a chickens' paradise. From these we suppose that some great winners will be evoked, since their color and feet seemed, so far, to leave nothing to be desired. Many of the twelve weeks old cockerels weigh now 3½ and 3¾ lbs. apiece and some even go up to 4 lbs. Our last visit was across the road to a fine paddock of nearly three acres, which Mr. Reeves has lately acquired at great cost as accommodation land to prevent the same being covered with cottages and thus injuring the beautiful views from Northlands. Here were hens in numbers, Silvers and Colored, and a bonny lot they were; not one did we see but possessed the very whitest of feet and true Dorking symmetry and style. We had now inspected all the Dorkings, and although from their great numbers we have only been able briefly to tell the history of their merits. their winnings, their beauty, and their healthiness, still we have described enough to show what a splendid Dorking establishment Mr. Reeves possesses, and this, too, combined with all the most useful and most modern poultry appliances of a simple character. We had just time before catching our train to have a look at the well arranged apiary, stored to repletion with sections of honey, well filled and of the purest color, while jars and bottles of the golden produce were staged four-fold thick upon the shelves. Mr. Reeves is proud of his bees, and in surroundings so charmingly floriferous we do not wonder at his great success. Then we had a look at the Gold and Silver Pheasants, which were in glorious condition and are great pets of the household. Even then our host said we had a few minutes to spare, so we adjourned to the hot-houses, where order and beauty were once more visible. The loveliest of spring blossoms were here on view, and Mrs. Reeves moved among her floral treasures as if she loved them all. Jersey cows of pedigree we saw in the distance and well bred porkers, without number almost, in the farm-yard; but pigs and cattle are not for these pages, so with one more admiring glance at the tulips we left. We took with us the most pleasant recollections of kind hospitality and an enjoyable day, with the supposition, moreover, that the North country Dorking enthusiasts will have to buckle up their armor if they want to beat the Northlands Dorkings at the coming summer and autumnal exhibitions.—Stock-Keeper, Eng., April 29th and May 6th, 1898.

Toronto Industrial Fair.

Editor American Fancier: At a meeting of the Toronto Industrial Fair Poultry Committee the following judges were selected for their approaching exhibition, viz.: Jos. Bennett, Toronto, Barred Rocks; George H. Burgott, Lawton Station, N. Y., Leghorns; I. B. Johnson, Games, Game Bantams and Pet Stock; T. H. Smelt, Woodstock, Red Caps, Hamburgs, French, Silkies, Minorcas, Spanish, Andalusians, Orpingtons; S. Butterfield, London, Asiatics, Ornamental Bantams, Javas, White and Buff Rocks; L. G. Jarvis, Montreal, Wyandottes, Dorkings, Polands, Geese, Turkeys and Ducks; Chas. F. Wagner, Toronto, Pigeons; Jas. Bertie, Toronto, Cage Birds. The prospects for a large show are very bright. A. W. BELL.

Toronto, Canada, May 17th, 1901.

—Advertise in the American Fancier. Good results will follow.

To the Members of the National Bantam Association.

In accordance with the motion passed at the last annual meeting, I have the pleasure of making public the report of the Treasurer for the year ending February 1st, 1901. We also append a brief statement of receipts and disbursements from December 15th, 1894, to April 5th, 1901.

RECEIPTS.

Cash on hand as per balance, Feb. 1st, 1900	$109 04	
Cash received in annual dues and donations	274 30	
Total		$383 34

DISBURSEMENTS.

Printing and Stationery	$ 14 90	
Ribbons for Specials	69 94	
Cash Specials paid	233 00	
Electros, Revenue Stamps and Exchange	8 14	
Stenography and Typewriting	13 90	
Expenses of Secretary	14 00	
Total		$353 88
Cash Balance		$ 29 46

STATEMENT OF RECEIPTS AND EXPENDITURES, December 15th, 1894, to April 5th, 1901.

Total amount received from all sources		$991 90
Total amount paid to Members in Cash Specials	$769 68	
Total amount paid for Printing, Postage, Stationery and Secretary's Expenses	192 81	
Total Expense Account.		$962 44
Balance		$ 29 46

Respectfully submitted,
A. A. PARKER, Treasurer.
By order of the Treasurer.
E. LATHAM, Sec'y.

London (Canada) Fanciers.

Any person who is wide awake and professes to know good weather from bad will unhesitatingly join us in pronouncing the 26th and 27th of April two of the finest days of the season; as good as we sinful chicken cranks could ever expect to have the privilege of enjoying. These were the days we visited the London fanciers; typical days to bring out the warm hearted smile on the faces of chicken enthusiasts and the liveliest kind of growth in the chickens too.

We honestly believe there is no place in America that can produce as many genuine poultry and pet stock fanciers to the square inch as the beautiful city of London, and we doubt if there is any city, big or small, that can turn out as many purely high class show birds. London is celebrated the continent over for its good poultry. The high-grade pianos, trophies, silver cups and other valuable specials which have been won by London birds at such shows as Chicago, Kansas City, New York, Boston and the Ontario are too numerous to mention. If we were to undertake to enumerate the comparatively small number that we are personally aware of that have been won it would take up the principal part of our paper.

Leaving the realities of the city chicken fancy we will now try to impress on the minds of our readers why we think London has gained this much deserved honor of being the leading prize chicken town of the continent. In our opinion it is due to three reasons: 1st, because it can boast of having the oldest active breeder in Canada, i. e., Mr. Allan Bogue; 2d, it is surrounded by a hilly country, which is specially adapted for poultry raising; 3d, the soil which is a sandy loam is the best to raise healthy poultry on.

The city itself is one of the most beautiful inland places in Canada. It is located on the fork of the Thames River and is surrounded by the Alps—or some other kind of hills.

HUGH WYATT.

As the east bound 10:10 morning train steamed into the London depot we through the car window observed the genial features of "Uncle" Hugh Wyatt and his worthy son, Edward. After descending to terra firma we were greeted by a hand shake that made us feel right at home. "Come this way, my rig is around here," was among the first sentences uttered by our big hearted friend. In a few moments we were speeding westward through the broad avenues of London in a carriage drawn by a beautiful grey pony. By the way, she was molting though, but we did not have time to notice that we were being covered with crisp grey hair. As we drove along we occasionally heard from a shop door or from a window, "Hello, Uncle Hugh." In a short time we were out of the west side of London and up on the hills, and a few moments more landed us at the home of Mr. Wyatt, and a charming place it is, too, decorated on all sides by beautiful evergreens. Mr. Wyatt informed us later that he had two daughters, but they were both married. It was no surprise either to hear this, because a home like that would entice any well bred young man. Among the first things to catch our eyes were some gigantic bundles of buff feathers roaming about the yards. They were beauties. We all know about Wyatt's Buff Cochins, but before going farther we might say the cockerel that heads his best pen is a crackerjack. We asked Mr. Wyatt where he picked him up, but he answered us with a smile and "never mind." We next inspected his choice stock of Partridge Cochins and Light Brahmas. Mr. Wyatt very justly prides himself on keeping the best and only the best. He has now caught the Belgian Hare fever and has purchased a grand pair from a noted American breeder. Our visit to the hare hutches will be remembered for a good time to come. Eggs have hatched very poorly for Mr. Wyatt, and at the time of our visit he had no chicks out. The famous watchdog of the Wyatt plant is certainly a wonderful dog. He is a "blue blood" English Setter and almost as intelligent as some human beings. If anything, no matter how small, goes wrong around the yard he knows it and will tell his master in his peculiar dog talk. If he sees a hen out of its own yard or a neighbor's hen on the premises he is not contented until things are righted. He also has a great hatred for tramps, but he can easily distinguish them from other people and took no familiarities with our pants, nor even did he bark at us. There are no two branches of farming that give better results coupled together than fruit and poultry raising. These are what Mr. Wyatt makes his money at, and he certainly makes it, too. By the time we had finished our look around the poultry houses the good lady of the house informed us that dinner was ready, and we lost no time in planting ourselves around a well spread table and for the next hour our waistcoat gradually but surely seemed to contract. After dinner, accompanied by the Messrs. Wyatt, we called on two nearby prominent poultrymen,

ROBERT B. MILLARD AND FRANK MOORE.

Both were at home and in good talking shape. Mr. Millard's yards are located on the top of a hill overlooking the city. The hill slopes to the south and makes a splendid place for raising early chicks. Mr. Millard breeds Barred P. Rocks, White Wyandottes, White and Black Cochins, and the quality was just all right. You can depend that any birds that "Bob" has in his yards will do your eyes good to look upon. We were very sorry to learn that Mr. Millard had had a few days before three very valuable birds (Boston prize winners) killed in broad daylight by a low down, mean contemptible cur. It always raises the temperature of our blood to hear of a dog killing chickens. If it was a common sheep or pig that had been killed the law would make the owner of the dog suffer, but when it is only a "chicken" nothing is done, no matter if the bird is worth one hundred dollars. We will now come back from where we drifted to the original subject. Mr. Millard had a number of promising chickens out, ranging in age from a few days to three weeks. Mr. Frank Moore's lot adjoins Mr. Millard's to the south, and is also on the side hill, and is completely sheltered from all north winds. Mr. Moore breeds White Wyandottes exclusively, and he has good specimens of the Wyandotte type. He reports good hatches and from the appearance of the production of his flock (chicks) we think his assertion true. Frank says the reason other breeders got poor hatches was because their stock lacked in vigor. His birds certainly did show great activity. We next called at

LATTA BROS'.

Yards, which are located in South London, but were disappointed to not find Mr. C. Latta at home, although we took the liberty of looking through the pens and yards. Everything was neat and clean and the stock in the best of condition. Messrs. Latta Bros. breed all varieties of Cochins, and they are Cochins indeed, in shape, color and abundance of feather. We recognized a number of their last winter's prize winners, especially in the Whites. We did not notice any chicks. but perhaps they were some place we overlooked. Before leaving the city we met Mr. Charles Latta on the street and had a short talk with him. He is in the insurance business now and it deprives him of much spare time to spend with his poultry. We now drove south through London and out in the country. After going a number of miles through a beautiful well drained country we came to the home and yards of

ALLAN BOGUE,

Canada's oldest breeder and one of her most prominent and active workers in the fancy poultry industry. Mr. Bogue has been engaged in breeding and exhibiting poultry for the past forty-seven years, and has not tired of it yet. To put the matter very mildly we believe now, in fact, he is more enthusiastic in the fancy than seven-eighths of the younger fanciers of to-day. He can talk henology from daylight till dark and not be weary of it, nor weary his listener either.

The day we visited Mr. Bogue's farm he was laboring under the disadvantage of having a cold and it affected his throat considerably, but he did his best to entertain us and succeeded splendidly. Perhaps Mr. Bogue is accustomed to disadvantages, as he has fought the battle of life alone, or, in other words, he has worked through life without ever hearing the cheering voice of a wife. His farm possesses everything that is needed to produce strong, healthy stock—sunny side hills, abundance of shade and a stream of clear water fed by a never-failing spring which runs through the farm. Mr. Bogue breeds all the most popular varieties of water fowls, all varieties of Polands, Houdans, Dorkings, Hamburgs and Partridge Cochins. He was the first man in Canada to handle some of these varieties, and he named over several of these that he had bred continuously for the forty-seven years. Whatever is on Mr. Bogue's farm is of the highest quality, or it would not be there. He is not satisfied unless he can win every time. Mr. Bogue is so well known that it is useless for us to say much about him personally. He has filled the highest position the poultry fraternity has to offer a man, i. e., President of the American Poultry Association. He has also been president of the Poultry Association of Ontario. Ever since the last mentioned association was organized, Allan Bogue has been one of the most prominent workers.

At the time of our call at the Bogue poultry plant. very few chicks were to be seen. The experienced proprietor told us that he would keep on setting eggs until he had a sufficient number, and he would see that they got their growth before cold weather. Our space is too limited to make mention of the quality of each variety and Mr. Bogue's system of mating. The poultry buildings are not fancy in structure, but are built for use. Some of the buildings look rather ancient, but everything is kept in the best of repair. Mr. Bogue has a separate house and yard for each variety during breeding season, and therefore he has no trouble with birds passing from one pen to another through doors or gates accidentally left open.—Breeders' Advocate.

GILBERT'S NEW PIGEON BOOK.—The latest and best book devoted to pigeons. Thoroughly American and up-to-date. The author, Major F. M. Gilbert, is world famous. Handsomely bound in cloth. Price $1.00. Free to all sending us two new subscribers.

PIGEONS.

Pigeon Hints.

So far the new century has been anything but suitable for the breeding and rearing of young pigeons, but at last there seems to be some hope of the weather settling, when there will be a better chance of success. Still, much care and attention must be paid to the breeding stock, and it must not be forgotten that for the next month or two we have to reckon with the east winds, which often play great havoc with the very young squabs in the nest when left, even for a short time, by the old ones. They seem to have also a bad effect upon the eggs during the time of incubation, causing delay in hatching and even producing shell-binding and death if timely help and assistance are not given in breaking through the shelly covering. The past month or at least the latter half, has been a most trying time for both stock and young ones, owing to the severity of the weather, and even those fanciers who had wisely delayed breeding operations did not come off scot free. In most cases the birds had settled down to the work of sitting, and in some instances young ones had appeared in the nest when the cold spell commenced and these fared very badly. The old ones, however, had gained strength and condition while waiting, and were therefore much more able to withstand its influence than those mated up much earlier and weakened by the strain of breeding, sitting and rearing young ones. The latter, therefore, have been the chief sufferers, and they have had to experience pretty well all the ills and troubles that are likely to affect them during the breeding season.

Never have I known a time when there has been so much sickness and mortality among the stock, and in many cases even old and well-tried fanciers and breeders have been almost inclined to give up in despair, while young and untried hands must have had a bad experience for their first entry to the world of pigeon breeding and rearing. Perhaps the best idea will be given of the immense amount of mortality during the last two months when I mention a case that was brought to my notice, when a young fancier told me that he had two or three youngsters hatched early in the year that were then in full moult, but that there were no others produced since, all the following nests being either unfertile, had not hatched out, or the young ones had died after a day or two. If such a case as this is not sufficient to convince even the most stubborn upholder of early breeding, then I am afraid nothing is likely to have any effect, and the effects of such an unwise proceeding must be borne as best they can.

Cases of egg-binding, weakness of limb before or shortly after laying, have been most frequent, thin-shelled eggs, or even eggs without shell covering at all, have been most common, and, as a further sign of weakness and want of condition, the laying of single or very small eggs has not been wanting. To make matters worse the weakness and want of condition have in many cases been intensified by what can only be looked upon as a lack of common sense, even if a still harder term might not be used with truth. What greater folly can it be to let such birds go to nest again after showing such signs of weakness? And how can it possibly be expected for them to improve and grow stronger under the trying strain of laying and sitting, especially under the influence of bad weather? Many a time has the young fancier been warned that success in breeding cannot be expected unless the old ones are in thorough health and condition, even under the most favorable conditions, and how, then, can good results be expected when they are out of sorts and under the ill effects of cold and bleak winds? These latter, again, have been the means of great loss from a cause that is not, happily, of frequent occurrence.

The old birds, and more especially those mated up early in the year, have not sat so closely as they should have done; they have come off and stayed off longer than usual, or in extreme cases have even deserted the nest altogether. In the former it has come about that hatching has been delayed until the nineteenth or twentieth day, and the old ones have not been in a proper position to feed them, owing to the soft food having begun to thicken or even in some cases to have turned sour in the crop, in either case bringing about the death of the newly-hatched squab unless timely help has been afforded by means of hand-feeding. In other cases the old ones have forsaken the nest when the usual period of incubation has been completed, and the young ones have become cold and died in the shell without showing any signs of chipping. In such cases it is well to test the eggs for signs of life before throwing away and when found to be alive inside to endeavor to find another pair to put them under to hatch out. The best means of thus testing is to put the egg into rather warm water, and if life is still extant the egg will commence to bob up and down.

From what has already been said I think it will be plain to the merest novice that the only thing to be done with any chance of success in grappling with any weakness or want of condition in the stock birds is to at once relieve them for the time of the arduous duties of breeding, sitting and rearing young ones. This done, they may be brought into a better state of health and body by means of good feeding, a tonic, and a course of cod-liver oil capsules. Let them have plenty of freedom and exercise in the open air when the weather is favorable, and a bath once or twice a week under similar conditions; and these benefits, together with the absence of care and the strain of breeding, cannot but have a strengthening effect upon the system and once more get them into a proper condition for the remainder of the season.

Of the diseases that have so far been rather prevalent, and which must be guarded against during the coming months, those most to be feared are roup and canker. We are likely for some time to come to experience the bitter effects of east winds, and there is every possibility, too, that there will be plenty of rain, and both these must be kept out of the loft as much as possible, the former by protection from the quarter whence these winds blow and the latter by soundness of the roof and sides of the building in which the birds are kept. Many young ones have died in the nest from roup and canker in the throat, and in many cases before it has been discovered what has been the cause, and therefore it would be well to examine the young ones periodically to see that they are going on properly. If taken in hand at the earliest stage, and more especially when the young ones are well grown, a cure may be effected by removing the matter accumulated, washing out the mouth with vinegar and water, and cleansing the blood by administering a pinch of Epsom salts once or twice a day. When very young the case is pretty well hopeless, and the best thing is to put the little sufferers out of their misery and thus prevent the disease from spreading in the loft.

I have been asked several times lately if these diseases are inherited from the parent. In the case of canker I think this is probable, but am not so sure about roup, although in very bad cases where the whole system is impregnated with the disease, it would seem only natural that the young ones bred from such parents should be tainted from their birth. Where, however, the old birds are suffering intensely there would be sufficient outward signs of the disease to warn the owner against using them for breeding purposes. That has not been so in the cases that have come under my notice lately, but rather that the old birds have appeared in perfect health, and it is the young ones only that have shown signs of the disease. I have used the words "appeared in perfect health" advisedly, for it is quite possible that in their case they may be developing the germs in their system, and may pass it on to the young ones with the food before exhibiting any outward signs of the disease themselves for some time after the squabs have succumbed to the complaint. Again, it is even possible that the very passing on of the germs to the young ones may of itself be the means of relieving them for the time being of the disease, or it may be that what to them is only a very mild attack may be fatal to the weak little squab. Such a theory would readily account for each succeeding nest being infected without the old ones showing any signs, and many cases of a like nature have come under my notice during the past. When this happens the only thing to do is to remove the cause and then the effects will cease. It is useless trying to doctor the young ones, but the old ones themselves must be taken in hand, separated, and put through a course of roup pills and Epsom salts and the young ones destroyed. The loft, or at least that part inhabited by the infected birds, should be cleared of all material, which should be taken out, cleansed or burnt, and the resting-place thoroughly washed down with disinfectants, and, last of all, a coat of hot lime-wash put on.

It must not be forgotten, however, that there are other causes which are likely to bring about the disease. For instance, the nests may be situated in a draughty place or exposed to the influence of damp, and by these means the tone of the body may be so reduced as to predispose to an attack of the disease by making the body and more especially the blood, a fitting habitation for the germs to live and multiply. Again, the same effects may be produced by feeding on corn that has been badly stored and has thus become dirty, mildewed or infested with the larvæ of insects, and also when it has been allowed to lie about and become fouled by the droppings. The water may also become a source of infection by the same means, or when it has become stagnant and impure by want of frequent changing or from exposure in an open vessel.

I have already referred to the ill effects of east winds upon the eggs during incubation, by means of which delay in hatching or even shell-binding is brought about. In nearly every case this is produced by the hardening and toughening of the membrane lining the inner coat of the shell, and to such an extent may it proceed that the young one is quite unable to force its way through the leathery substance and come out of its prison walls. The hardening process may be further helped and intensified by the birds' inability to obtain a bath, while even when a bath is provided the severity and bitter action of these winds may prevent them from taking advantage of it. When this is found to be the case the eggs should be lightly sprinkled, or, better still, sprayed with warm water, and this should be done once a day for the last week of incubation. Care should be taken that the eggs and nest material are not saturated with the water and that the sitting hen is not kept off the nest too long and the eggs allowed to become chilled. The best time to perform the operation is after the morning feed when the hen comes off the nest and the cock takes his turn at sitting. When this is done the bird is not frightened or driven from the nest in alarm, and it also prevents the chance of the eggs being injured if the bird struggles or strikes out with its beak and wings to escape from the hand, or in defence of its nest. Some birds will become very tame and can be handled with impunity, and, when possible, this state of things should be effected, as it can be done generally by care and quietness of action when performing the different offices of cleaning and overlooking. But with some of the shyer and wilder breeds even the near approach or raising of the hand is sufficient to cause the bird to make a wild dash from the nest, and in its flight scattering the eggs and often smashing them against the hard nest pan.—W. Fellowes in the Feathered World, Eng.

[To be continued.]

Cat a Mother to Chickens.

Freehold, N J., May 17th.—Judson Bray, who lives near here, has a cat which apparently takes great delight in acting as mother to chickens. It has been Mr. Bray's habit to take young chickens to the house as soon as hatched in the incubator and put them in a basket. When the cat sees the chickens in the basket she climbs in among them and lets them snuggle up to her as though she were the mother. Last season the owner of the cat tried a lot of goslings, and the cat did the same thing.

PET STOCK.

A Veteran English Fancier's Views.

Editor American Fancier: I have recently received through a friend a copy of your valuable paper of April 6th last, and on page 11 I read with great interest a letter on the Belgian Hare, which I, as one of the oldest, if not the oldest, breeders living, cannot quite agree with.

1st. The Belgian is the pet rabbit. Why? Because it requires patience and deep interest to breed successfully winners, but, believe me, after this boom is over, Belgians will always command a high figure. Before ever this boom was I have sold many for home requirements at £15 to £20.

2nd. The demand has been temporarily checked, as many of your importers have been most shamefully treated. Even some of our "big pots," as they are called, of mushroom growth and little or no real knowledge, have been going all over the country picking up hares to supply your men—and such animals, not worth the carriage.

3rd. The exact origin was a direct cross between a black English and a sandy or yellow, the young bred twice in and out, and then crossed with a rabbit, which was called a hare in Belgium, but it was no other than the Flemish Giant. The English rabbits were the means of getting shape and quality—the Belgian of today. Only a few years since, say ten, they had scarcely any color on hind feet and the fore heavily ticked and very short. Now our best hares are well colored on belly and legs free from ticking, deep lacing, and long thin ears and bold eye.

I personally am strongly of opinion that all varieties of domesticated rabbits should be treated very differently to what is usually done. I never give root crop or green stuff, only as a medicine. A rabbit in confinement is quite a different animal to one which has its freedom, consequently must be treated differently. A tablespoonful of middling pea chips and just a little linseed meal, mixed with boiling water, and served cold at 8 a. m.; to each hare at night an egg cup full of black oats and the same quantity of pure water, a handful of clover dry or good hay. Bucks must not have bedding. If the eye of the hare is not bright and full give a little celery or parsley and you will find in twenty-four hours she will be quite bright and her water again all right, free from redness, but should it not be so, give a twig of common broom (yellow), and that will, I feel sure, put them all right. I mix lime, sawdust, and Joy's purifier and sprinkle it after cleaning every day and groom every night. I never breed from stock until after it is nine months, bucks and does, and never let my youngsters be with the mother after one month (usually find it better to take them away at three weeks and put them to the mother every night for a short time). I don't keep more than four with a doe. I have foster mothers; they only have four.

Now, after being a fancier for over fifty years, I must say that Mr. H. S. Babcock is quite in error, as I can truthfully say I have bred some thousands of Belgians and have never seen or heard of a white one. It is equally true that no Belgian of the best blood ever had a white one, and what is more, how could it come? There is no white blood in the construction of the hare, and what has been sold to your buyers from this country as White Belgians is simply a fraud. Blacks will frequently come by too long inbreeding, but never a white one. I am afraid the seller who ever said so must be a big white man who

State Agent For The Star Incubator Company.

has told a very big black one. You see, as I stated at first, these young men of mushroom growth may have fancied they had seen white ones in the nest when they had come home from some convivial meeting I guess many mistakes are made after these midnight gatherings, but I must add I have never yet mistaken a black for a white.

But for all that Mr. Babcock's letter is most interesting and valuable, and if any of your readers desire further information I can only say I shall be very pleased to enlighten them to the best of my knowledge, and I am very proud to say that the Council of the National Museum must think something of my knowledge and stock to select mine as a specimen to be exhibited for the benefit of breeders.

Finally, I do hope that all your buyers will now insist on having a full pedigree given with each hare and that such authenticated document must be declared before your consul here, then if a "made up" one is proved you bet you can go straight for him But the certificate of the National Belgian Hare Club counts for very little, as it is only open to those who choose to be members, which I don't—but honest pedigrees I do.

May 5th, 1901.

Raising Belgian Hares in the City.

[Fourth Annual Report Philadelphia Vacant Lots Cultivation Association. Season 1900.]

With a view of providing employment of a closely allied nature, one that at present is not overcrowded, your superintendent established a Belgian Hare rabbitry with a view of testing the possibilities of this little animal as a meat producer. The growing of Belgian Hares for their meat and fur is a new and profitable industry. From very reliable sources he learned that from a trio of Belgian Hares, properly cared for, 200 to 300 hares could be easily grown in one year. Food upon which they thrive best is produced in great abundance on the gardens. The hares grow to maturity in five or six months, weighing at that age 5 to 8 lbs. each. By starting each of the gardeners with a pair or trio of Belgians they could, in addition to growing their own vegetables, grow their meat in their back yards and with but slight labor and expense.

With this idea in mind, early in May a pair of Belgian Hares was secured as a test. Your superintendent discovered that one of the gardeners, an old German woman, was actually growing in a small back yard the meat which her family consumed. In a space 10x12 feet she kept fully 50 hares, from which she was able to kill four or five each week without diminishing the herd. This woman gave your superintendent a pair of hares. To his great surprise and delight, in less than two months there were eighteen head of hares in his rabbitry thus started. This was about July 1. The rabbitry then contained nine grown hares and sixteen youngsters. With little care and no food except the waste from the gardens, this hare family multiplied so rapidly that by November 1 there were nearly two hundred in the herd.

Many of the gardeners watched the experiment and five of them began to establish a rabbitry. The experiment established the fact that from a trio of hares one can easily grow in a year a family of two to three hundred, each of which will weigh 4 or 5 lbs. About November 1 the superintendent was instructed to start a few selected gardeners in the new industry at the association's expense, on condition that they pay the association for the hares or return within six months a number equal to the number they received.

PEDIGREE BELGIAN HARES..
Belgian Hares direct from Banbury, the English headquarters of this popular Rabbit.
ROBERT A COLT, of Pittsfield, Mass.,
Being in England on business, has associated himself with JOSEPH PETTIPHER, of Banbury, for the purpose of selecting and shipping to America pedigreed Belgian Hares of both sexes, for either stock or show purposes in any quantity. Arrangements have been entered into whereby selections to suit all purchasers can be made from the leading Rabbitries in England, and the utmost care will be taken to ship the best possible value for the money with any order that may be placed in our hands. Address
Colt & Pettipher, 76-tf
Woodway House, Near Banbury, England.

My Buffs outrival the famous Barred P. Rocks. They have a rich, even buff plumage with low comb, clear yellow legs and the proper Rock shape.
They have won 21 1sts and 12 2ds this year in the hottest competition.
Eggs 15, $2; 30, $3.50; 45, $5; Inc. eggs 100, $6. Write for ill. catalogue.
Hazelmere Poultry Yds.,
Cranston, R.I. 99-tf

HENS WILL SIT
and do their level best when given the right kind of a nest, the right number of eggs, the right kind of food, the right kind of care and dusted with the right kind of insect powder. For this latter purpose Lambert's Death to Lice fills all of the requirements.

EGGS WILL HATCH
when the breeders are kept free from lice, and when they have daily out door or scratching shed exercise. Under these conditions eggs from healthy birds are usually well fertilized. When good eggs fail to hatch the trouble is often out side of the eggs. Lambert's Death to Lice Pow der never injures the fertility of eggs for hatch ing, the sitter or the little chickens should they hatch in a handful of it.

CHICKS WILL GROW
when started free from vermin and kept so from the shell up. If allowed to become lousy they lose strength and vitality, which will stunt them in growth or cause an early demise. More chickens die every year from this cause than any other, while a little Death to Lice Ointment would save their lives. 73-24

DEATH TO LICE REMEDIES:

First Prize Pen at New York.

"RINGLETS" SOAR STILL HIGHER.

AT THE IMPERIAL SHOW OF THE NATION—MADISON SQUARE GARDEN, N, Y., THE WORLD'S RECORD OF

E. B. THOMPSON'S BARRED PLYMOUTH ROCKS

4 YEARS IN SUCCESSION was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ever accomplished in the annals of the **New York Show; Winning** during **4 years in succession MORE THAN THREE TIMES AS MANY 1ST PRIZES** as any other exhibitor, and as many **1ST PRIZES** as **ALL COMPETITORS COMBINED,** besides more **than twice as many Cups** and **Specials** as all, including the **superb challenge Trophy,** value **$100.** for best cock, cockerel, hen, pullet and exhibition pen; **$100 Sterling Silver Cup** for finest exhibit, **Grand Special Prize Sweepstakes Cup** value **$100** presented by the **President** for best P. Rock cock, cockerel, hen and pullet, any variety. My clean sweep of

FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES

on pullets has never been approached in Madison Square Garden, and stands alone and unequaled.

The world's record of 1st on exhibition pen at New York 3 years in succession is the undisputed Champion. With their 1900 record the **"RINGLETS"** have won at New York a grand total of **77 PRIZES. 31** of these prizes are 1st and specials, being 17 more 1st and special prizes than won by any competitor in the history of the show. Rare bargains in yearling breeders in lots of a trio or 100. Show bird fit to win in the fastest company. Richly illustrated 24-page catalogue on application. Elegant breeders in any number. Eggs from finest exhibition matings, 1 sitting, $5; 2 sittings, $9; 3 sittings, $12; 4 sittings, $15. ADDRESS 91-tf

E. B. THOMPSON, Amenia. Dutchess County, New York.

MUFFED TUMBLERS FOR SALE.

WINNERS IN ENGLAND AND AMERICA.

The grandest collection of winning Muffed Tumblers ever gotten together is now on sale, and can be seen by appointment and birds selected. I will sell any Muffed Tumbler I own and arrangements can be made to take the entire lot. The varieties are Blue Saddles, Black Badges, Black Mottles (Yellow Rose cock, 1st Boston and Chicago, price $15, one of the best living) and several other odd birds, all winners or will produce winners. My Tumblers possess characteristics peculiarly their own, having been bred carefully for years, and are streets ahead of any other strain. In the past five years I have bred more winners than all others combined. Stock birds sold to others have bred their best birds; why, then, waste time and money by breeding from ordinary stock, when for an ordinary outlay the best birds living can be obtained? Those who would like to win and breed winners are invited to correspond. Prices very low, but nothing in muff legs under $5 per bird. (Some as low as $2.50 in surplus Clean Legs.) Testimonials from dozens who have purchased winners in all parts of the country. Satisfaction guaranteed. State wants fully. See winnings at Birmingham, Eng. (1st and medal), Boston, Chicago and New York. While winning here I had a team of six winning at Birmingham, Eng., the greatest Tumbler show in the world, irresistible argument as to the quality of my stock. 48tf

F. W. GORSE, Box 228, Highlandville, Mass.

S. C BROWN LEGHORNS..

My birds are equal to the best. Have won more prizes on a given number of entries than any Leghorn breeder. Circular, free, will prove this. At Boston this year, 3 entries, 2 1sts, 1 3d; at Erie, 1900, 1st pen, 1st cock, 2d hen, 1st c'k'l, 1st, 2d, 3d, 4th pul, $5 spec. 10 highest scoring Leghorns, special best trio, silver cup best ck, ckl, hen, pul, a showing of 121 Browns. Eggs, $2 for 15. 93-tf

L. O. BROMLEY, SILVER CREEK, NEW YORK.

Now Is the Time you want Eggs

By feeding your fowls a little

BANNER EGG FOOD AND TONIC

your hens will lay lots of eggs, and you can double your profits, as this is the season of the year when fresh laid eggs are scarce.

REMEMBER, TO THOSE this TONIC does not force your hens to lay; it only brings them up to the pink of condition which is necessary for egg production. who have never used it, we simply ask you to give it a trial, and be convinced.

Or any real live poultry supply dealer. DON'T ACCEPT ANY SUBSTITUTE. INSIST ON HAVING STAR SPECIFIC.

WHAT SAVED JUDGE CLARK'S CHICKENS.

Scotch Plains, N. J., Sept. 13, 1900—Judge Clark, when not dispensing law and dealing out justice, devotes a great deal of his time to raising chickens and ducks. About two weeks ago his fowls were attacked with a disease which began carrying them off at an alarming rate, notwithstanding all his efforts to check the epidemic. Several authorities on chickens were consulted and it was agreed that the fowls were suffering from some form of cholera. A remedy was at last found to check the disease. This was procured from the Star Incubator Co., of Bound Brook, and it proved to be just the thing, and the Judge is once more happy and will begin at once to replenish his stock.

From Plainfield (N. J.,) Daily Press. September 13th, 1900.

Manufactured only by STAR INCUBATOR COMPANY, BOUND BROOK, N. J., AND 38 VESEY ST., N. Y. CITY.

BUCKEYE CHIEF.

Champions at Pittsburg, 1901....

In a class of 162 we won 1st and 4th on cocks; 2nd cockerel, (losing 1st on condition, easily best male in class); 2nd and 3rd hens; 3rd and 4th pullets; 2nd breeding pen and our 1st cock and 2d cockerel were the talk of the show.

AT CANTON we have been holding the reins for years. 1898, Bridge, judge, 1st cock; 1st cockerel; 1st and 2d hen; 1st and 2d pullet. At Canton, Jarvis judge, 1st cock; 1st hen; 1st and 2d pullet; 3d cockerel; 1st pen. Canton, 1900, Lambert judge, 1st ck; 1st cockerel by error of ¾ points in weight; 3d pul; 4th and best of all, 1st breeding pen. Canton, 1 01, Myers judge, 1st cock, 92½ 3rd cock, 92; 1st cockerel, 94; 3rd cockerel, 92¾ and A CLEAN SWEEP OF 1st, 2d and 3rd PULLETS, 94¼, 9 ½, 93¼; 3rd hen, 92½; 1st breeding pen 187.

Besides this I have sold the winners for many shows this season.

EGGS I sold last year produced winners! Why not book you for a few settings and for once in your life have Barred Rocks of standard shape and color? Don't hesitate, but send stamp to-day for my illustrated catalogue explaining all.

THE OTSELIC EGG BOXES.....

I make the neatest, cheapest and best Egg Box on the market to-day, for shipping eggs for hatching. Over 10,000 settings were shipped in my boxes last year, and not one bad report. If packed according to directions which go with each box, there is no possible chance for eggs to get jarred or broken. My boxes are made of dressed pine with slide cover fastened with screws, handle on cover and pasteboard fillers on inside, made large enough to allow plenty of packing around each egg.

MY PRICES FOR 1901 ARE:

	PER DOZ.	PER 100.
15 Egg Size.....	$1 25	$ 9 00

"Profitable Poultry Keeping in All its Branches."

This is the title of the new and elegant Catalogue issued by the Cyphers Incubator Co., for 1901. It contains 224 pages, 8x11 inches in size, over 200 fine new half-tone illustrations and a wealth of interesting, down-to-date matter, covering the subject of **Poultry for Profit** in all its branches.

This is a Brand New Book,

not a re-hash of old ones. Contains special articles written by experts, and illustrates and describes over fifty of America's largest and most successful Duck, Broiler, Roaster and Egg Farms. It also contains the endorsements of over one hundred of the foremost breeders of this country—men and women who are using the **Cyphers Incubators**—and shows photographic views of many of their poultry plants and favorite poultry houses. Ask for Book No. 9 enclosing 10c in stamps, and address nearest office.

The American Fancier

(J. H. Drevenstedt & Edward Bartlett.)

TYPOGRAPHICAL UNION LABEL FULTON COUNTY No 286

SATURDAY JUNE 1 1901

From the Editor's Perch.

"With all due courtesy to foreign goods and foreign fowls, my sympathies are purely American, and I may be thought foolish when I declare that America leads the world in all things, and that our fowls are the best and finest on earth. Every fowl that has come to us from Europe we have improved and made better in every way. No one can deny this."—J. H. Davis in Fanciers' Gazette.

We admire Brother Davis' patriotism, but the true American fancier is not going to allow his judgment to be swayed by prejudice, a real fancier is broad-guaged. He can see as much good in a bird bred in England by an Englishman as he can in a bird bred by an American. We would like to agree with Mr. Davis but we cannot, when he says "every fowl that has come to us from Europe we have improved and made better in every way." In order to be fair to all and especially Mr. Davis, we will take up the Buff Cochins. They have been improved in this country and we believe America leads the world in that variety. That is glory enough in its limited way. But how about Black Red Games and Black Red Game Bantams? Have we improved on the English strains? If we have why import winners from England? How about Hamburghs? Why do we import so many crack birds from the other side to show at our largest exhibitions? Is the American Dorking an improvement over the English Dorking? If it is why are winners imported by leading breeders? How about Rouen ducks? Where do the monstrous fine ducks come from that attract attention at our leading shows? From England. After they are bred in this country a few generations they seem to get down to the usual standard seen at the fall shows, viz: Good enough in color but too small in size. How many Aylesbury ducks has Mr. Davis ever seen in America that equalled the English strains in size? Who originated the Sebright Bantam and who perfected the clean narrow black lacing? Why English breeders of course. And here again America can claim a division of the honor, for such Sebright experts as Zimmer, Quilhot, Keller, Andrus, Treichler, McNeil, etc., have kept up with the best in England. Yet why do they import birds nearly every year?

***

We could enumerate many more instances, but the above suffice to show that a fancier in America is no different than a fancier in England or any other old place; he wants the best regardless of the nationality of the person he buys from.

***

"The current number of the American Fancier says: An anti-score card club organized in the West is a novelty. Evidently Mr. T. J. Kimmey, the secretary, and the rest of the members, have come to the conclusion that the score card is not the thing it is cracked up to be. We shall await the results accomplished by the above club with considerable interest.

"If the 'Mr. T. J. Kimmey' mentioned above is a misprint for Fred. L. Kimmey we say without hesitation that the 'anti-score card society' mentioned is an iridescent dream, born in the vivid imagination of the one who gave the item to Brother Drevenstedt. If it refers to some other person, then we do not know the gentleman nor know of him, and after some inquiry have not discovered any fancier who does know him. So far as we are informed there is no anti-score card society in the West, nor is there one in contemplation."—Commercial Poultry.

If Brother Purvis will kindly look over his files, pick up the May 4th issue of the American Fancier, he will find on page 10 in the first column an address to breeders and fanciers in which it is plainly stated that on February 7th, 1901, the Anti-Score Card Club of America was formed and that Mr. T. J. Kinney (not Kimmey) is the secretary. His address is Brainerd and Edgerton Streets, St. Paul, Minn. We regret that Editor Purvis did not "catch on" to this, but then his is the paper "that is different." At the same time the American Fancier is not indifferent to his oversight and takes pleasure in helping the brother out.

***

Mr. W. Vale in Poultry, England, sums up a very important and timely matter on feeding chickens as follows:

"In the management of chickens there comes a time when it is necessary for to be a parting of the ways as regards feeding. Those that are intended to be kept for breeding from should have a spare, but highly nitrogenous diet, and also a diet that has a rather high percentage of water combined with the foodstuffs composing it, not added water. Those chickens it is the intention to kill for table use should have a diet containing a large proportion of the carbo-hydrates for about three weeks before the time that they are required for killing, and when so fed it would be found that they would be in much better condition for table than they would be if generously fed with the carbo hydrates from the time they were hatched. In order to lessen the chance of poultry becoming diseased when being fattened, the process should never last longer than about three weeks. It is an error to feed even those chickens intended for killing generously from the time that they are hatched, and it is erroneous to suppose that they would make larger birds than those fed first on the stock-making principle. Those chickens intended for stock may have three moderate meals daily until the time when they are three months old, if they belong to a small or medium sized breed, and up to seven months if they belong to a large breed; and after that time until the breeding season has arrived two moderate meals would be ample for poultry in rather confined runs, and more than enough if they were on a free run, in any but inclement weather. It is necessary for those in confinement to have some animal matter and juicy vegetables daily."

***

Another important matter is the separating of the sexes, where the best results are desired. The fine quality and large size of pullets sold in the French markets is due to the above method. The cockerels are also benefited by the separation in the same way. Mr. Rowland who some eight years ago startled the Pekin duck fanciers by exhibiting enormously large specimens, attained his success in obtaining such heavy weights to the separation of the sexes at the first signs indicating the sex and then keeping them apart out of sight and hearing.

***

Mr. I. K. Felch, in an article entitled "Review of the Show Season 1900–1901 in America," published in the current number of the International Poultry Journal of St. Petersburg, Russia, takes pains to belittle the value and influence of large shows and incidentally give the score card a boost at the expense of comparison judging. We quote the following from the above article:

"A question, however, occurs to one. Is it the large exhibitions, such as those held at New York, Boston or Chicago, which exert the greatest influence on the poultry production of the United States, or is this occasioned by the numerous country exhibitions which have gone to swell the total number of shows held during the past season to 120? At our large city exhibitions, it is true, a great number of town bred sightseers, who, while they are not poultry fanciers or poultry breeders, will readily pay enormous prices for prize specimens. This, naturally enough, rouses the small country breeders to action, but, in spite of this fact, it is the small exhibitions which are held in the heart of our agricultural districts which do the better work. The shows at which from 400 to 1,000 specimens are exhibited are those to which the masses send their stock, and it is at shows such as these where we see true merit. At these exhibitions the purchasing element is not so much to the fore and the judging indicates with greater accuracy the birds of merit, owing to the fact that, in most cases, the awards are arrived at by means of the score card application of the Standard. In the bigger shows the awards are made by open judging with very often extraordinary results. For instance, at one of the greatest shows a 4th prize specimen sold for a higher price than had hitherto been paid for a single specimen in America, and this would certainly not have occurred if the Standard had been applied by score card tabulation of the specimen's defects."

Granting that small exhibitions are of great value and that we see true merit at such, it is very unfair to cast reflections on the great shows that really inspire the smaller ones. Furthermore, it is absolutely unfair to attribute all the blame to comparison judging. We will state for the benefit of Mr. Felch and all other detractors of the comparison system of judging that the hottest and strongest fanciers' show held in the United States is held at Johnstown, N. Y. This every fancier and exhibitor is aware of, and it is a comparison show and always will be. A third prize bird, a young cockerel, was sold for $50 at the last show, but the second and first prize birds were not inferiors; on the contrary, they were held at prohibitive prices. Nobody in this section cares for a score card, but they do care for careful judging minus a lot of mythical cuts, fractions and other arithmetical stunts. If we were to enumerate some of the wonderful valuations given by score card judges to Sebright and Game Bantams we are afraid that the Johnstown and Gloversville Bantam breeders would "go light" and fade away. Zimmer, Quilhot, Mosher, Blunck and Parker tremble whenever they read about Sebrights scoring 96½ points. But for their misguided views as well as for those of our readers who do not believe in inflated scores we will take another paragraph from Mr. Felch's Russian essay:

"We are, however, of the opinion that comparison judging is not so frequently employed now as it was in former times, nor is it so appreciated and depended upon, and the large exhibitions, at which this system is still in vogue, are fast losing their influence on the Fancy, whereas by adopting the score card and by having the various specimens' score card value reported in their catalogues they would greatly enhance their value and would undoubtedly improve the chances of effecting good sales."

The above is simply a crushing blow—the unkindest one of all. It landed in Russia and rebounded back to America. We publish it to please the author and others who would like to see as he sees these big shows, with their horrible system of judging and their idiotic way of trying to be honest and just to the public that pay the money at the gate to see the ribbons up and a catalogue on hand to study the exhibits by.

Maunder Replies to Story.

Editor American Fancier: In answer to Mr. Story's letter in the American Fancier of May 4th, will say that I fail to find a Fancier in my collection with date of January 29th. The nearest I have is January 26th, and friend Story's article does not appear in that issue, but I guess I can find it if I hunt up my papers. I think his article has done the Minorca much good, as it certainly kept them before the public, and not one article on the subject was against the breed. I don't blame friend Story for not telling your readers who M'gr. L. K. F. Y. is. (If I were Story I certainly would tell no one.) But if Mr. Story could see the letters in my possession from prominent and practical breeders of Minorcas, giving their opinions as to the name of the writer, he would no doubt be a very much surprised man.

Now, regarding comb, unless I am very much in the wrong, friend Story was satisfied when the Standard called for five points to comb, for the reason that five was the Standard number. Now he is very glad the Standard has changed it to six points on comb, as he says a proper comb on a Minorca with six points is enough for any bird. Now, I'll admit I am not like friend Story in agreeing with what the Standard calls for, simply because it's the American Standard of Perfection. I think inside of five years the present Standard will be so altered that you will hardly recognize the Standard of today. (There has been lots of it that

has been altered at every meeting of the A. P. A.)

I came out openly and said an eight pound Minorca cock with a five point (or serrated) comb was a ridiculous sight, to say nothing about a ten pound bird, while a five pound Leghorn cock with a good shaped five point comb was a thing of beauty and, I may add here, a joy forever. To my mind, a perfect comb would be one that if it was cut off and placed rear in front it would look just as well as formerly.

Friend Story suggests that if the American Standard does not suit me I had better go back to Old England and breed Minorcas with combs so large that it is a burden for them to hold up their heads; also breed them sooty black in color, while he breeds the green sheen. A very good suggestion in your mind, no doubt, friend Story. But allow me to halve that suggestion with you. I would advise that you take the first part to yourself. Take a trip to Old England, see the Minorcas and how they are raised there, and I'll gamble a cookie to a doughnut that you don't return to America without some of those English Minorcas that at present you seem to enjoy poking fun at. At the New York show last January I believe the first prize hen was an English bird, and quite a few winners there were imported from England. A few years since when Mr. Duff, of Canada, went down and swept the boards with Black Minorcas all his winners (old stock) were imported from Old England and his young stock were raised from them.

As the Minorca is the breed in question, I will stick to them; but how many American exhibitors have shown nearly all varieties of the best birds seen at our leading shows of which either the birds themselves or the eggs from which they were hatched did not come from across the pond? And we need not confine ourselves to fowls. Take pigeons, dogs, etc.

Regarding meeting some of my specimens at New York next winter, as Mr. Story says he should be pleased to do, I really don't think friend Story meant what he said, for the reason that being a director of the American Minorca Club, and the club's next annual meet taking place at Philadelphia, Pa., in December, he certainly would rather meet my birds at the club's show, and if all goes well I shall have a few specimens there. If Mr. Story or anyone else has better birds at that show than mine they will get all the praise from me that I can give them. Now, friend Story, tell us that you did not mean New York but Philadelphia. Don't turn your back on the only chance you have had for a long time to have a man judge your birds that has proven himself qualified in every sense of the word. Be sure and send to the club's show this year now we have a specialist judge elected, and be sure and don't pay expressage on black feathers tipped with grey. I always think that doing so is superfluous.

In conclusion, let me thank you very much for your letter, but I have not words enough at my command to thank you half enough for your most beautiful poetry. I am going to try and get it set to music to the air of "My Country 'tis of Thee" and have same sung at the next meeting at Philadelphia.

FRED. MAUNDER.

Buffalo, N. Y.

Does Fancy Poultry Pay?

Editor American Fancier: The dangerously illusive but tempting advertisements in poultry journals convey the impression to the uninitiated that the breeding of fancy poultry is a veritable bonanza. Many an inexperienced amateur has been dragged into the meshes of this net. It is the old story of the spider and the fly over again, as the crop of "flies" in the poultry run is apt to be largest from now on, the spiders will weave their net-work assiduously. It is next to useless to caution the tenderfoot to beware of buncombe advertisers or fanciful writers in our poultry journals. We are not pessimistic in our views, nor can we look at this question

GILSEY HOUSE

Heslach Farm, Albany, N. Y.
349tf

of "does fancy poultry pay" in an optimistic sense, but prefer to discuss it in a conservative manner.

How many have reaped fortunes at this business? Not many, and some that have owe less to the manner in which they breed or procure their stock than to their utter disregard of principles which should guide an honorable breeder. They are hucksters whose chief aim is to secure the almighty dollar. It is needless to say that this class is responsible to a large extent for the downfall of the amateur fancier. The disgusting statement made by some of these sharks of the thousands of birds they sell and the thousands of dollars they have made are base fabrications. There are honorable breeders enough who make a fair competency breeding and selling fowls, but ask these breeders how many choice birds they sell every year and a startling confession will be the result. Take any breeder of Wyandottes, Plymouth Rocks or any other parti-colored breed and assuming he averages $5 for his 90 point birds, how many 90 point birds do you suppose he has in his flock for sale? If he raises 100 Silver Wyandottes and on the basis of 50 per cent cockerels, he will rarely find more than 5 cockerels to score even 90. The pullets may do better, and if very carefully bred we may get perhaps 10 birds to score 90 and over. This would give us 15 birds at $5 each which is $75. The cost of advertising, exhibiting, etc., is also an item to be considered, which, however, the sale of his other 85 birds would help considerably to decrease. Still the 100 birds would not bring more than $200 as a rule, and it will cost nearly $100 in feed, advertising and exhibiting to realize this sum. This is on the assumption that a man is honest and does not sell culls at $5 each. Where a breeder raises from 500 to 1000 birds the profits will be proportioned somewhat larger, for provided he has proper facilities for caring and raising such a large number, but even $1000 profit in 1000 chicks is not always in sight. The egg trade, however, you will say, pays the expenses. Perhaps it does in some instances, but breeders as a rule do not claim to derive large profits from the sale of eggs—even at $5 per setting. We have taken the Silver Wyandotte as an illustration, but will Plymouth Rocks, Partridge Cochins, Dark Brahmas, etc., average any better? No, some of them even worse. Light Brahmas with careful breeding pay perhaps the best as a parti-colored fowl. They give the greatest per centage of 90 point birds and even the culls sell better as a rule. With solid colored fowls sent as White Wyandottes and Langshans the per centage of culls is small, and provided a brisk demand springs up, the sales will average a good profit.

But you say an extra fine bird is worth a pile of money. Yes, provided you have the bird and the buyer. It is, however, an unsafe speculation. You will perhaps remark that thoroughbred cattle and horses pay their breeders well. This is true and again it is not. The large and phenomenal prices realized for individual specimens is no guide. It is the regular sale of stock at reasonable figures, which must develop the profit. Because $105,000 was paid for Axtell the 3 year old trotter, it is insane to advise men rushing into the business of producing Axtells. Many a man has been swamped through raising trotters. He speculated on the uncertainty of a colt's speed. It is worse than a lottery and costs more. But the sale of legitimate thoroughbred stock for coach, road and draft horses is what tells a different tale. So with fowls, a breed must be selected to meet the demands of the market. The merely ornamental fancy fowls which have their admirers, also have their sales confined to very small limits. The popular fancy fowls, such as Brahmas, Plymouth Rocks, Wyandottes, Leghorns and a few others will meet with ready sales in many instances, and for the benefit of amateurs we will state that should they wish to enter the poultry business as a means of livelihood to look sharp to the practical side. No better illustration can be given of this than the remarkable success of two noted breeders who confined themselves exclusively to one white breed until a few years ago when they added another white breed. They raise hundreds of birds, and the very fact of their having two breeds which properly bred will not average more than 10 per cent culls, it is easy to see why they were success ful, financially and otherwise, they can raise 500 birds and sell 400 at good prices. They have pursued an honorable course and are respected throughout the land. This is no appeal in favor of white birds, but simply a suggestion to amateurs and the unexperienced, who as a rule must rush and select breeds they know nothing about and then hopelessly flounder in the depths until energy, money and ambition is lost and then retire disgusted, claiming that fancy poultry does not pay.

DOMINO.

New York City.

London (Canada) Fanciers.

(Continued from May 25th issue.)

After leaving Mr. Bogue's yards we drove back to the south-eastern side of the city and called at the new plant of

N. T. KETTLEWELL.

The entertaining proprietor was hard at work fixing up his new home and yards, but he found time to show us all his birds and have a good talk about them. Mr. Kettlewell breeds White Wyandottes exclusively, and from his record at the largest Canadian shows for the past few years, every poultry breeder knows he has good ones. He says when he sees a bird that he thinks will improve his flock he will have it if money will buy it. That is the kind of a man that can improve a breed and make money out of it. Mr. Kettlewell has only had possession of the place he now occupies but a short time. We think after he has made the numerous changes he proposes to make and gets his new buildings up that he will have one of the nicest plants in Western Ontario. A few and only a few chicks were to be seen here, but all were looking very strong. After leaving the Kettlewell plant we proceeded to the much-talked-of establishment of

NEWTON COSH & CO.

This extensive, new and up-to-date plant is located west of London, out among the hills and valleys, an ideal place for chickens. When driving up to this plant it reminded us of the large concerns of the same nature in the United States. The buildings and yards are very extensive and embrace all the twentieth century ideas. They are so constructed as to be handy and durable; everything showed thrift—chickens hatched and reared artificially. We saw such large numbers of chickens running to and fro that we were fairly dazed. They were from two months old, down. Messrs. Cosh & Co. must certainly have used good incubators and brooders. Barred Rock chicks seemed to take the lead in point of numbers, and we noticed some beautifully marked ones among them. Blue Andalusians, Buff Wyandottes and Barred P. Rocks are bred at this plant. The Cosh strain of Blue Andalusians have proclaimed their qualities at New York, Boston and the Ontario for a number of years and have no superiors in America. Messrs. Cosh & Co. have recently commenced breeding Barred P. Rocks and Buff Wyandottes, but they are fast coming to the front ranks. Mr. Newton Cosh, manager of the plant, seems to take a deep interest in the Barred Rocks, and says that he will not be satisfied until he is at

E. C. STEARNS & CO.,
Box 12, Syracuse, N. Y.

the top. He has a great battle to fight, but we think he is enough for it. The late hour of the day compelled us to retreat and so we retired for the night. We were on the road again early next morning and drove to the northern part of the city and called on the famous

WILLIAM McNEIL.

"Billy" was very busy as usual, preparing to go down town on business. He only had a very few minutes to spare to show us around, but he said he would do his best. We knew that the minutes he referred to had more than sixty seconds, so we took a good look at everything as we went. Nearly every bird was fit for exhibition—in good health and feather. Mr. McNeil thinks that if a man is intelligent and industrious that he can make a success of more than one variety of fowls, and judging from his record at America's largest shows he must be correct. He seems to take the best prizes no matter where he shows. Mr. McNeil breeds all varieties of Polands and Hamburgs, White Cochins, eight varieties of Bantams and a few rare varieties of chickens and birds. The poultry houses on this plant are rather ancient looking, but seem to be handy and answer their purpose well. They are kept scrupulously clean at all times. The garden was decorated with a small number of downy chicks (about twenty), all looking well. Mr. McNeil raises a large portion of his chicks in his garden, and he says the garden and chicks do not conflict in the least. The sunflowers that he grows supply abundance of shade. Two incubators—a Cyphers and a Prairie State—are used to hatch part of his chicks. We next went to

A. J. MORGAN'S

poultry supply factory, and found the enterprising proprietor busy building boxes for shipping eggs in. Everything that is needed around a poultry plant, from cut clover hay to hatching machines are manufactured here. Mr. Morgan's factory is equipped with the latest improved machinery and the propelling power is furnished by a gasoline engine. The productions are: Incubators (in several sizes), brooders (indoor and outdoor), shipping coops, fattening coops, egg boxes, ground bone, ground oyster shells, cut clover hay, pulverized charcoal and numerous other small useful articles around a poultry plant. Adjoining the factory is a poultry building two or three hundred feet long, divided into pens, with a large yard adjoining each pen. The capacity of the building is something over one thousand fowls. White Leghorns seem to be Mr. Morgan's favorities in the line of poultry. He had one of his sectional brooders in operation with a batch of chicks. We were shown the ins and outs of the machine, and our verdict was that it should be a good one. After seeing everything about the factory we were taken to the cellar of Mr. Morgan's residence where his incubators were in operation. He explained all the good points of the machines and how and where they are superior to the other incubators. It is surprising how fast the Morgan incubators and brooder are coming to the front, considering the short time they have been on the market. Mr. Morgan is also doing quite a business acting as agent for a number of the leading poultry journals.

R. OKE.

The last place we visited was that of Richard Oke, located on Richmond street, to the northern extremity of the

city. Of all the poultry establishments in London "Dick" Oke's presents the most striking appearance. His poultry buildings are extensive and are painted red with white trimmings. Everything around the farm indicates neatness. When we approached the Oke mansion we were met by several comical short-faced little dogs, but our dog knowledge was too limited to discern the exact breed. We thought their bark worse than their bite so we proceeded. We were much disappointed to learn that the proprietor was down town, but his father was very kind to show us all over the place. Mr. Oke exhibits his stock only at the largest shows of America, and his record is an honor to him, and shows his ability for mating and breeding fancy fowls. He handles all varieties of Hamburgs and Bantams, also Creve Cœurs, La Fleche, Javas, Partridge Cochins, and this year he has a choice pen of Barred P. Rocks. A few thrifty Partridge Cochin chicks were running around the yard. When we departed the variegated parrot under the veranda bid us "good-bye." For the want of more time we were compelled to make this our last call.

While going to the train we met Mr. H. Tozer on the street and had a short talk with him. He reported no chicks out, but expected some soon. He thought he was as far ahead as the breeders that had wasted so many eggs in the early part of the season in their frantic endeavors to get early chicks.—The Breeders' Advocate.

Buff Leghorns On a City Lot.

About five years ago, in the spring of 1896, hearing my neighbors tell of the number of eggs they were getting from their hens, I decided I would have some, too. I had only a city lot 50x125 feet, and of course the house and barn take up a portion of it, so I couldn't have a very extensive poultry farm, but found I would have plenty of room for a poultry house and yard and have some space left. I had the house built with a double wall, with a 4-inch space between, and lined it with tar paper.

I started by buying some hens of the butcher,—mixed stock, in which the Plymouth Rock blood predominated. They laid awhile and then wanted to sit. I got a poultry catalogue from a man who raised nearly every breed in the Standard, and as all were praised very highly, I hardly knew which to select. I wanted layers instead of a large meat fowl, so determined to try the Plymouth Rocks or the Leghorns. I bought eggs of three varieties, Barred Plymouth Rocks, Brown Leghorns and Buff Leghorns. At that time I had never seen a Buff Leghorn, but thought from the description I might like them. Having had some experience in raising chickens when a boy, I had very good success, and raised about sixty. I gradually killed and ate them till in the fall I had thinned them down to sixteen—eight Plymouth Rocks, five Brown Leghorns, and three Buff Leghorn pullets. I then kept a record to see which were the best layers. The Leghorns began laying six weeks earlier than the Plymouth Rocks; they often lay before they are five months old, and mine beat the Rocks every month till March; during that month the Plymouth Rocks laid as many eggs as the Leghorns but in the latter part of the month the Plymouth Rocks wanted to sit, so that stopped their good laying record, while the Leghorns kept right on.

I decided that the Leghorns were the fowls I wanted for laying, and that the Buff Leghorns were better than the Brown Leghorns in many ways: 1st, they lay fully as well if not better than the Brown; 2d, they lay a much larger egg, as large or larger than a Plymouth Rock. I have frequently weighed them when seven eggs would weigh a pound, while it took ten to twelve Brown Leghorn eggs, an advantage of 50 per cent in weight, which if eggs were sold by the pound means 50 per cent more per dozen; 3d, the Buff Leghorns are larger than the Brown, making a better table fowl and more popular with people who prefer a larger fowl than the Brown Leghorn.

To my mind the Buff Leghorn is the most beautiful fowl bred when perfected as we have them now, of an even buff surface color from head to tip of tail, especially the females, bright yellow legs, white ear lobes and bright red comb and wattles. When seen on a green lawn or scratching in yellow straw, almost the color of the fowl, they are admired by all and certainly present a very fine appearance.

Well, I sold the Brown Leghorns, bought a Buff Leghorn cockerel and another pullet; since then I have raised nothing but Buff Leghorns, and am more in love with them every year.

In getting new blood to improve my stock and keep it right up to the standard, I bought from the best exclusive breeder of Buff Leghorns in the United States, and had the satisfaction of raising fowls that won first prize at the recent Chicago show, January, 1901. On four entries I won first prize on hen, cockerel and pullet, three firsts out of a possible four. I then bought the first prize cock, paying the longest price I ever paid for a Buff Leghorn in order to have the four first prize birds in my breeding pens this season. The reason I paid the price I did was not alone the fact that he won first prize, but that he was of the same type as my own stock, and of the same blood that has been bred along the same lines, and that he won first prize as cockerel in strong competition at the Chicago show the year previous.

I find that most Buff Leghorn breeders are increasing the weight somewhat, as we think it an advantage so long as they keep their non-sitting qualities. They rarely want to sit, but will sometimes when they grow older; if allowed to sit when they get old, in the only one I ever tried, I found her an excellent sitter and a fine mother, fighting anything that came near her chicks.

The last few years has seen a great improvement in color of plumage and color of legs. Where formerly there was more or less black or white in plumage, especially in wing or tail and the legs of a greenish cast, we now get many specimens of a solid buff color throughout and with bright yellow legs; of course we have culls the same as with all other breeds, but I have never had to sell a pullet for less than $1, even if she is off color, as she is worth that for her laying qualities.

The first three years I raised the chicks at home, but since that I have used all my space for breeders, and had the chicks raised on a farm. I send out the eggs in the spring and bring back the chicks in the fall. I find no trouble in selling all the eggs and chicks I can spare, and while it is a side issue with me I make it pay and get a great deal of pleasure out of it. Some of the large broiler plants are using Buff Leghorns extensively now, as they feather out so quickly and the yellow pinfeathers do not show.

To show in what esteem they are held by the public, I will quote a few remarks heard at the recent Chicago show. I had the four first prize winners together at the end of the Buff Leghorn alley near the centre of the Coliseum. A gentleman came up, a stranger to me, and I afterwards learned not a breeder of any variety, and standing before the first prize cockerel remarked, "that is the most beautiful rooster in the show." Several remarked about the hen, and among them a gentleman who raised several hundred last year: "That is the most beautiful, even colored Buff Leghorn hen I ever saw."

If there was as much written about the Buff Leghorns as some of the other breeds they would be even more popular than at present, and I find that the noted Buff Leghorn breeders have sold every Buff Leghorn they could spare from their breeding pens. I think they stand at the head for beauty and utility.

The American Buff Leghorn Club, of which George S. Barnes of Battle Creek, Mich., is secretary, is bringing the breed before the public, and doing more active work for the Buff Leghorn interests than ever before. The Club solicits the membership of every reputable Buff Leghorn breeder and fancier. Mr. Barnes will send the Constitution and By-laws showing the object and benefits of the Club to all who request him to do so.

CHAS. L. THAYER.

Chicago, Ill.

To the Poultrymen of New York State.

To each and every exhibitor from the State of New York who wins an Exposition cash prize at the Pan-American Exposition, said cash prize will be duplicated by the State of New York. The amount for this purpose was secured by Mr. Converse through the New York State Commissioners. To make it plainer, if a New York State exhibitor wins $5 cash Exposition prizes the State also pays $5.

Supt. of Poultry.

Lawton, N. Y., May 28, 1901.

Grove Hill Poultry Yards.

THE HOME OF MR. BRIGHT'S ELEGANT PLYMOUTH ROCKS AND LEGHORNS.

Just within gunshot of the first station east of the main station of Waltham, Mass., is located one of the farms used for the accommodation of Grove Hill poultry. Just below the high prominence upon which the summer home is built and gently reclining toward the south are the houses for the Brown Leghorn matings; beyond this a large field that is bordered upon three sides with stately elms and maples, the summer home of the growing Brown Leghorn cockerels; to the right across the roadway a large pasture lot with running water, this being used later for the Plymouth Rock pullets. This also has lines of shade trees on either side that protects from both the morning and afternoon sun.

The general arrangement and order in and about this plant is the best we have ever seen where so many fowls are kept. Every point and appointment is to be compared with a well regulated military post. The barns, pens, yards, runs, feed house and kennels all show that complete order that only come under the watchful eye of good management.

At this point we had the pleasure of quietly studying the Brown Leghorn matings, and in these quarters are also kept the Barred Plymouth Rock cockerel first at Boston and his pen of hens. Why they should not be called a very high class mating for cockerels we could not tell. About one mile from these yards is the farm, where some fifty matings of Barred Plymouth Rocks are kept. The same thrift and order pervades the whole farm that is so plainly seen about the home yards. We never saw better planned yards. Each pen has its own run way and outside and beyond each is a very large enclosed grass plot, into which three pens have openings. In this park the several yards can be turned at pleasure, so that plenty of grass run is always assured.

At the farm we noted some grand matings for both cockerels and pullets; we cannot tell how they could be better, the shape, color and barring of all so very perfect, the males used in the pullet pens as distinctly barred almost as those in the pens for males. No experiments are tried in these yards. Birds that have proved to be good producers and their descendants are used in the matings, and hundreds of young chicks in sight show even clear barring that bespeaks good quality for next winter. One feature pleased our fancy and that was the fine, large size and vigor of the females in use. Such give promise of the best results.

The quality of the Brown Leghorns was a pleasant surprise. We admire the clear even brown of the soft even shade, finely stippled as it might be called with the darker shade. Here we saw it to perfection, some of the females so beautiful and even in color, so free from shafting or brown reflections as to look as if one and the same color all over. These also had most beautiful necks and tails. It was quite evident that the best are not always ready for the exhibition when needed, for we saw quite a few that had not been shown that surpassed the winners of last winter. To the credit of Grove Hill farm, let it be known that among the whole collection of several hundred we did not see a single specimen of improper quality.

The grand cock bird that attracted so much attention among the Barred Plymouth Rocks at Boston, his sire and a dozen cockerels, full brother to this cock and the first Boston cockerel, are the main dependents among the matings for cockerels. In pullet matings, cockerels, sire and grand sire in line are used in the several beautiful matings that promise to produce by far better than any yet produced at Grove Hill Poultry Yards.

McG.

His Wife Told Him So.

"What is a home in the suburbs without chickens?" asked George H. Hall of Avenue H and New York avenue, Vanderveer Park. "Chickens around one's place means that some of the benefits of country life may be had within a few minutes of the office. We will have them, and such things as broilers, fresh laid eggs and wholesome chicken pies will be in order in a short time."

"Chickens don't always lay eggs just when you want them to, my dear," mildly suggested Mrs. Hall.

"But we won't depend on the chickens," said Mr. Hall. "I will have an incubator and what is more I will make it myself."

"Don't you think it would be cheaper to buy one?" asked his wife.

"Can't afford it," said Hall. "Besides, I know just what I want and I can make it in no time."

After a day of hard work and absence from business the incubator was completed and placed on the second floor of the house where the sunlight could reach it. On his return from business that evening Hall brought with him several settings of the very best eggs he could buy. Hurrying through dinner the whole family repaired to the room containing the homemade incubator in which the eggs were, and the lamps lit.

"There'll be a great lot of chickens," remarked Hall, as he smilingly surveyed the outfit. "Now, every one of you leave the house and we'll see what will happen."

Shortly after one o'clock the next morning Hall and his family were awakened by the clanging of fire engines and the smell of smoke to find that the incubator had set fire to itself and all the upper part of the house. The damage was $200.

"An incubator would have cost about $50, George," said Mrs. Hall the same night.

One of the rarest of the Rare Deposits yet found in the bowels of the Earth.

DIAMOND FLINT. Nature's blending of Grit, Lime and Phosphoric Acid, not to be excelled for Digestion of Food in Fowls and the creation of egg shells, adding vigor to the strongest of your flock.

Scientists claim this deposit to have been formed more than 5,000 years ago, and it is recognized by them and the natives, who have been using it for more than 100 years for their Poultry, as one of the most valuable products of the earth yet discovered for any and all kinds of fowls—Second in Hardness to Diamonds Only, hence the name "DIAMOND FLINT," tho formed of a heterogeneous mass of shell-fish and shells from which a milky substance flows when first exposed to the air. Does away with all need of oyster shells. Instead of buying a ton of oyster shells and a ton of ordinary poultry grit, order a ton of DIAMOND FLINT and you have all the properties to be obtained in both the others, and many other beneficial qualities not contained in either, at a great saving of time, labor and money.

West Brookfield For 1902.

The grand success of the West Brookfield Poultry and Pet Stock Association exhibition for this year, insures one of the largest in the state being held there January 21st to 24th, 1902, with C. A. Ballou of Worcester and D. J. Lambert of Apponaug, R. I., as judges. At the annual meeting the following officers were elected: R. H. Buffington, president; L. T. Smith, vice-president; E. L. Richardson, secretary; H. J. Stone, assistant secretary; John W. Houghton, treasurer; executive committee, H. A. Flagg, Loring Albee, C. B. Perry, E. R. Sibley, H. J. Stone; hall superintendent, F. E. Pepper. The boys are wide awake this year and are working to make this the best show ever held in West Brookfield. The premium list is under way, and advertisers and those desiring to offer specials should correspond with the secretary at once and secure space. Exhibitors should include the dates of this show in their list of shows for 1902.

E. L. RICHARDSON, Sec'y.

Buff Orpingtons at the Pan.

Editor American Fancier: Please state in your valuable paper that the Buff Orpington Club will offer a silver cup for the best Buff Orpington male shown by a member of the club at the Pan-American. By a majority of the club members voting, Mr. T. F. McGrew was chosen to judge Buff Orpingtons at the Pan-American, and the management have placed him on that class.

(Continued from May 25th Issue.)

FATTENING CHICKENS.

Considerable work has been done during the past year in the fattening of chickens for our home markets. Since September nearly four hundred birds have been fed and killed. Some of these chickens were pure bred, others were grades of such breeds as the Plymouth Rock and Wyandotte, and a few were the common barn-yard fowl.

Fattening was commenced September 10th. Ninety-six grade chickens were placed in the fattening coops. They were divided into eight groups of twelve birds each. These birds were fed from the small V-shaped trough arranged in front of each coop for three weeks, after which they were starved for thirty-six hours so as to empty thoroughly the crop and intestines, and then they were killed. The cramming machine was not used with these birds. The food was mixed with cold water, as skim milk could not be obtained. Eight different rations were used as follows:

RATIONS.	Wt. when put into crates.	Gain in 3 weeks feeding.	Food Consumed.	Cost per lb. gain.
GROUP I. Ration consisted of 2 parts barley meal, 2 parts corn meal and 1 part fine ground oats	36 lbs.	9 lbs.	46 lbs. 13 oz.	5.63 cents.
GROUP II, Ration consisted of 2 parts ground wheat, 2 parts finely ground oats, and 1 part corn meal	34 lbs. 8 oz.	7 lbs. 8 oz.	44 lbs. 6 oz.	7.39 cents.
GROUP III. Ration consisted of 2 parts corn meal, 2 parts buckwheat meal, and 1 part finely ground oats	33 lbs. 8 oz.	11 lbs.	53 lbs. 4 oz.	5.61 cents.
GROUP IV. Ration consisted of 2 parts finely ground oats, 2 parts corn meal, and 1 part pea meal	36 lbs.	12 lbs.	55 lbs. 4 oz.	5.15 cents.
GROUP V. Ration consisted of very finely ground corn	35 lbs.	5 lbs.	35 lbs. 1 oz.	8.2 cents.
GROUP VI. Ration consisted of coarsely ground corn meal	32 lbs.	6 lbs.	38 lbs. 2 oz.	6.63 cents.
GROUP VII. Fnely ground oats	34 lbs.	9 lbs.	43 lbs. 11 oz.	5.6 cents.
GROUP VIII. Ordinary ground oats	34 lbs.	5 lbs.	41 lbs. 14 oz.	8.3 cents.

These chickens did not do so well as those that were fed later in the season, owing to their being small. If they had weighed about four pounds each no doubt much better gains would have been made. They also suffered from the heat. It will be remembered that September was a rather warm month. We were also obliged to feed with water instead of milk, which may have had some little influence in reducing the gains. Cut bone was given about twice a week in the proportion of one-half pound to each group of 12 chickens.

It will be noticed from the table that fine ground oats are superior to coarse ground, owing largely to the fact that the finer ground oats are relished better. Coarse ground oats were not readily consumed and some of the food was wasted by the chickens picking for the finer portions.

The chickens of groups III. and IV. ate their rations more readily than those of any of the other groups. They also made the best gains at the least cost.

The chickens of group I. made a pound of gain fairly cheaply, but the ration was not relished. Hence the pounds of gain are few.

Those of group II. were unthrifty. The ration was not relished. When wet it was pasty and seemed somewhat indigestible.

Those of group V. refused to eat the fine ground corn, except in such quantities as would sustain life. This ration proved a very undesirable one.

Those of group VI. ate the coarse ground corn meal fairly well, but it proved to be an unsatisfactory ration for such small birds, especially during the warm weather.

These chickens were sold in Toronto and Montreal, netting here nine and ten cents a pound respectively. They were bled, but not drawn. The dealers pronounced those in groups III. and IV. to be best suited to their trade.

The second lot of chickens to be fattened were put into the coops early in October and were fed for twenty-four days, two weeks from the V-shaped trough and ten days from the cramming machines. This lot of chickens was over seventy-five per cent pure bred Plymouth Rocks. As in the first lot, there were ninety-six birds, divided into eight equal groups.

The buckwheat ration (Group III.) was the most satisfactory. The birds ate this food with a relish and gained rapidly at a small cost per pound.

The ration containing potatoes (Group VIII.) is an economical one and satisfactory where potatoes are in abundance.

Fine ground oats (Group V.) is not relished so well as the two rations previously mentioned. It is also much more difficult to procure. In a few cases indigestion was caused by the hulls of the oats.

The ration containing wheat (Group II.) was very unsatisfactory. In both trials one bird died of indigestion and the food was not relished.

The rolled oat ration (Group VI.) is much the same as the fine ground oats, so far as the general results are concerned.

The ration containing barley (Group I) produced a pound of gain very cheaply, but it was lacking in the number of pounds of gain.

The ration in Group IV. containing peas is a fairly good one and is relished fairly well.

The ration made up of corn and oats (Group VII.) is also a fairly good one, especially where birds weighing from five pounds each and upwards are to be fattened.

The third lot of chickens, most of which were low grade barn-yard fowls, were put into the coops early in November. These were also divided into eight groups of 12 birds each. The following table shows the rations used, food consumed, amount of gain, and cost of a pound of gain for both lots. It also shows the gain of the lot containing the large number of pure bred birds in comparison with the scrub lot. Both lots were fed the same in every respect.

RATIONS.		Wt. when put in crate	Wt. after being fed 2 weeks, V-shape trough	Food Consumed. Grain.	Food Consumed. Milk.	Gain from 2 wk's feeding, V-shaped trough.	Cost per lb. of gain.	Amt. gain from ten days' cramming.	Total gain from three weeks' feeding.	Cost per pound of gain when finished.

It was not possible to use many of these foods in the cramming machine, owing to the grains being too coarse. All groups were crammed with a mixture of two parts fine ground oats and one part ground buckwheat, mixed with twice its weight of skim-milk.

Where it is not possible to obtain the fine ground oats, shorts and buckwheat, finely ground, may be used in the cramming machine.

Food to be used in the crammer must be about the consistency of gruel and of such a nature that the solids and liquids will not separate when allowed to stand. In order to use cornmeal alone, it is necessary to have it cooked.

MARKET REPORTS.

These chickens were killed and shipped, part to Montreal and part to Toronto. The dealers were asked to report on the quality of the flesh and also as to what color of flesh they preferred, together with the most desirable weight of birds for their respective trades. Mr. Henry Gatehouse, 810 Dorchester street, Montreal, reports as follows:

"Montreal, Nov. 23, 1900.

"Dear Sir,—Enclosed you will please find return of poultry shipped to me. I am allowing you ten cents per pound all round and paying charges on same. I trust you will find this satisfactory. As to weight, I find chickens weighing from four to six pounds are most in favor with my customers.

"If you have any more of this class of stock to dispose of, and my prices are satisfactory to you, I am willing to take all you have to sell.

"Very truly yours,

"H. GATEHOUSE."

The chickens shipped to Toronto were sold by the Wm. Davies Co. and were reported on by Mr. John Porter. These reports were gathered from their numerous branch stores. The following are fair samples of the many reports sent in by the branch stores:

"The chickens from Guelph were exceptionally fine; they sold readily for 12½ cents per pound. We had two customers back this morning saying they had never eaten nicer birds."

"I find that a chicken of a light cream color is preferable to a dark yellow and a chicken weighing from four to five pounds is a better seller than a smaller one."

"Quality very uniform; all sold at 14 cents per pound."

"The chickens I received from Guelph Farm were highly satisfactory in every respect. They were very fleshy, without being too fat. Taking them all round, they were the nicest stock I have had in the store."

[To be continued.]

The Rosecomb—Black and White.

Not a finer coal black beauty
Among Bantams can be seen
Than the Rosecomb, whose chief duty
Is being black, embossed with green.
Not a speck of other color,
Except earlobes. these pure white;
And for shape, 'tis cent to dollar
That nine-tenths of all are right.
With a stately, sprightly carriage,
Flowing tail and dainty legs,
Who can beat my charming image,
Who can lay more dainty eggs?
I'm a shimmering, glistening beauty,
Always happy, never in gloom,
Who have always done my duty,
And will still, till day of doom.
Then, also, by a little slip in marriage,
Kin of mine were made pure white,
But the same style, form and carriage,
Kept by them as their sole right,
Makes them relatives of mine—
As White Rosecombs they now shine.

JOHN G. QUINIUS.

Dayton, Ohio.

—Two turkey herders recently drove a flock of over 30 birds through the streets of Ortega and Tiburcio, leisurely offering them for sale as they went along. The men were hardy mountain specimens, the cut of their clothing showing they had come from some distant pueblo. They carried whips with short wooden stocks and long lashes, and when a customer hailed them from an adjacent zaguan they promptly rounded up the turkeys, caught the one designated by the tail and handed him over for examination, the result being that many Sunday dinners were bought, as it were, "on the hoof."—Mexican Herald.

Advantages Of a Single Breed.

The caption of this article is hardly comprehensive enough, for it is intended to discuss not only the advantages to be derived from limiting one's choice to a single breed, but also the advantages accruing from sticking to that breed through good report and evil report, in days of popularity and days when popularity seems irretrievably lost. This article is intended for the beginner rather than the veteran, for the one who has made but a partial study of poultry culture.

Whatever may be the best course for an experienced poultry breeder--whether he keeps one or many breeds—there is no doubt that for the beginner one breed is sufficient, and that if he so limits his choice, he will obtain much more satisfactory results than if he starts with several breeds. Success with a breed is conditioned upon a competent knowledge of the breed. Different breeds require different management. What will produce good results with one will often produce bad or indifferent results with another. The feeding and care must be adapted to the requirements of the breed to obtain success. A Hamburg, for example, is an active, sprightly fowl, demanding and taking a large amount of exercise. It does not lay on fat readily. Its nervous vitality demands fattening—that is, carbonaceous or heat-producing foods, in order to keep up its activity. A Cochin, on the other hand, is of a sluggish disposition, little disposed to hurry in its movements, taking of its own will but a moderate degree of exercise and readily developing adipose tissue. It does not require so large a proportion of heat-producing foods in its daily rations as a Hamburg, but does require a larger per centage of nitrogenous food. The management and the feeding which will produce the best results must be quite different with these two breeds. Hints and suggestions can be given, but experience alone can give the adequate teaching that leads to success. The beginner has everything to learn, and if he studies a single problem, he will succeed much better than if he has a number of problems to study at once.

Again, successful breeding demands that the breeder shall have a correct ideal of what he desires to produce. He must have the shape, color, markings, habits —in short, everything that is required to make a perfect specimen of his chosen breed—well fixed in his mind. A correct ideal of any breed is made of many minute details, and the omission of any one of these means, to the extent of that omission, a distorted ideal. The ideal a breeder has will determine all his matings, and if he is so fortunate as to realize his ideal, his success will be proportioned to the correctness of that ideal. His results will never surpass his ideal; hence the great importance of a correct ideal. And if one has but a single breed, the chances of obtaining a correct ideal are much greater than if he has several breeds.

And once more, the realization of an ideal in breeding depends upon a knowledge of the breeding tendencies of the chosen breed. These tendencies relate both to color and to shape, and they condition every mating that is made. Take for example the Barred Plymouth Rock. Col. Roessle may know just how to mate this breed to produce success, because he has studied the breed. He knows that the males have a tendency to be too light in color and the females too dark. He knows that this is a natural tendency from the history of the breed, and that, though it is now nearly 30 years since breeders have sought to bring the two sexes to a uniform shade, the tendency fixed by the origin of the breed has not been fully overcome. He knows therefore, that to secure the correct color results, he must so mate his birds as to overcome this tendency, and to do it he must make special matings. But suppose he were a beginner, and instead of having, as he has, but two breeds, he had six or eight, how long think you it would be before he hit upon the exact matings that would bring uniform success? I don't know what are the facts in his case, but I venture to guess that he took but a single breed to start with, and later added a second, after he had mastered the first one.

Now, all these things—the study of the proper management and feeding, the learning of the habits and characteristics, the formation of a correct ideal, and the understanding, through a knowledge of the breeding tendencies, of how to realize that ideal—give ample scope for the exercise of the talents of any beginner. He certainly does not need to have his mind diverted from the one chosen breed and have his studies multiplied by five or ten. in order to give sufficient employment to his faculties.

But there is another advantage in limiting one's choice to a single breed that is seldom mentioned, but really deserves careful consideration. If one has only a single breed, when the time comes to introduce fresh blood, he need buy but one or two male birds—if he introduces it from the male side. If he has five breeds he will need to purchase five or ten birds. The majority of breeders, whether they have one or more breeds, have but a limited amount of money that they feel willing to set apart for this purpose. Say, for illustration, that this sum is $50. The breeder who has limited his choice to a single breed can buy two birds at $25 each and thus insure the purchase of not only well-bred but of superbly excellent specimens. The one who has five breeds will have ten birds to purchase, and he can spend but $5 on each specimen—a sum sufficient to purchase very good birds, but not birds of the character that $25 will buy. And the next season, the flocks will show the effects of these purchases. The one who can afford to spend five times as much for his males, will, other things being equal, improve the quality of his flocks much more rapidly than could the other man.

There is a decided advantage from a business point of view in being known as a breeder of one breed. In other words, after making the selection of a breed, it pays to stick to it. As a poultry writer, one needs to know many breeds; as an experimenter and producer of new breeds, it is necessary for one to handle nearly every kind; but as a breeder who expects to make money out of his fowls directly he needs to cling to some one breed. I could hardly condemn the breeder of many kinds—it would be very inconsistent for one who first and last has studied every breed and owned nearly every one—but I can from this wide experience see the advantages of a breeder's sticking to a single breed.

In the first place, it gives the people confidence in his stock. They say he breeds only one kind; there will be no chance matings among his fowls; he will know what he is about; he can give the buyer the best of the kind. And, singularly enough, people will also argue that as the breeder is a sensible man and has selected one breed, that breed must be the best breed to be had. If he issues a circular, the public's attention is not distracted by rival claims of different breeds so that it does not know what to buy, but it is focused on a single breed and is convinced that that is the breed to buy, and so the orders flow in a golden stream.

Again, the breeder who has a single breed and sticks to it, gets the full advantage of his exhibiting and advertising. Each year's prizes are cumulative. People remember that this man won on Barred Plymouth Rocks at Boston in 1896, New York in 1897, Providence in 1898. His advertising becomes cumulative also, and his name becomes, through the law of association of ideals, inseparably connected with the chosen breed. If one wishes to purchase a given breed, he will at once think of the breeder who has stuck to it for so many years.

It is a strange thing but it is nevertheless true, that no man's name becomes equally associated with even two breeds; it stands for one, and the second is recalled only by an effort of memory. Mr. I. K. Felch has bred not less than four breeds, and Mr. Philander Williams has bred a good many more than Mr. Felch, and yet at the mention of these names the Light Brahma alone is suggested. You cannot think of these two names without recalling this breed; yet the Plymouth Rocks of Felch have enjoyed a good reputation for years, and the Cochins and Dark Brahmas of Williams have been equally well known. If Felch and Williams should cease advertising, or if they should give up breeding Light Brahmas, five years from now there would be people ordering Light Brahmas of them, if the men were still alive.

If Bradley, Brostrus, Thompson, Hawkins or Roessle should cease to breed Barred Plymouth Rocks, still they would years hence continue to receive inquiries for them. I know that I have received inquiries for breeds which I had given up for a longer period than five years, so lasting are the influences of advertising and of reputation. I have sometimes thought that people consulted old advertisements in preference to new ones, so persistent have been the calls for breeds long abandoned. But if this were true, it would still be necessary to advertise in the present in order to capture the trade of three or five years hence. The man who thinks he can jump the printer is sure to get left, the latter is a man that cannot be forgotten, he is a potent fact in the making, preserving and extending of reputations. And it is true that without reputation there will be practically no trade.

If the positions taken in this article are true, one breed is enough for the beginner; if the veteran adds several breeds to the one of his choice, still his chief reputation will rest upon a single breed; and that to obtain the best financial results beginner or veteran needs to persist in the choice he has made, for in no other way can he secure the cumulative advantages of his winnings and his advertising.—H. S. Babcock in the Country Gentleman.

White Plymouth Rocks. Winners at Chicago, 1901. Owned and Bred by U. R. Fishel, Hope, Ind.

THE PIGEON STANDARD just issued by C. E. Twombly, editor of the Pigeon News, is a book that fills a "long felt want." It is well gotten up, contains a number of good illustrations, and is indispensable to every fancier of pigeons. Price, 50 cents. Orders filled through the office of the American Fancier.

—Keep an "ad" in the American Fancier and business will certainly come your way.

Crooked Breastbones.

Farm Poultry recently secured the opinions of a number of prominent poultry breeders regarding the cause of crooked breastbones in poultry. The breeders do not consider it hereditary. They vary considerably in opinion regarding the cause of it. One writer concluded it came from allowing young chicks to roost on narrow boards. The writer says: "The way I overcome this is to have a roost, even for the little fellows, at least four inches wide, with rounded edges. If I do not use 2 by 4's I would take a 4-inch board, round the edge off and put an inch board underneath to form a T, so as to stiffen the roost, and I know that I never get any crooked breastbones, whereas some of the people that raise chickens for me allow them to roost on round sticks and almost any place, and some of them will come with a slight turn."

Another writer says crooked breasts "are caused by roosting too young, or on improper roosts before the bones are thoroughly hardened. I have known cases where nearly every chick in one brood would have a crooked breastbone, while another brood from the same mating would not have a chick so affected, and the difference could be traced directly to the different conditions of roosting when young. Those which slept on floors with straw under them till nearly matured showed no signs of a crooked breast."

An Indiana man says: "I never let my young birds roost on anything but the floor of the coop until breastbone is hard enough not to be bruised by weight of the bird, then I always use 4-inch roosts."

A New Jersey man says: "I do not think it is from roosting too soon, as I have had ducks with crooked breastbones, and of course they sit on the ground to sleep.

"It seems to be in the season, as some seasons there are a great number, and at other times we seldom see any."

Another man gives as his opinion that it is "mostly on account of chicks going to roost when too young."

A Connecticut man says: "I find where I have had fowls from same mating farmed out at different places, those that roost on poles or branches that are easily grasped by the feet while roosting come back in much better shape as to condition of breasts, backs and legs than those that perch on the edges of boards, or on old fence rails. In my belief and experience there is less crowding on poles than on anything else, which allows better development and keeps them more free from vermin than anything I have ever used."

A Massachusetts man says his 20 years' experience make him conclude that fowls raised in a haphazard way, where the hen takes the brood to roost before being weaned and allowed to roost on improper roosts, such as round poles and sharp-edged boards, almost invariably have crooked breastbone. He also states that previous unhealthy condition of chicks' parents is a factor.

A well-known Pennsylvania poultry man says: "We have always held to the idea that improper roosts were the principal cause. Our experience the past year sustains this theory. Not one of our chicks went on to a roost of any kind until after Christmas, and we do not recall a crooked breast in the entire lot of over 400. We do not think it can be blamed on lack of bone-making food, for we recall a bunch of Leghorn chickens raised in the country and supplied with all the requirements for bone growth, but they roosted in the apple trees and more than half of them had crooked breastbones."

The consensus of opinion seemed to be that roosting too young on trees and narrow roosts was the main cause of producing crooked breastbones in chicks.

THE AMERICAN STANDARD OF PERFECTION.—Describes all recognized breeds of fowls. Indispensable to every breeder and fancier of thoroughbred chickens, ducks, turkeys and geese. Latest 1899 revised edition. Price, one dollar. Free to anyone sending us two yearly subscribers at one dollar each.

PIGEONS.

Lofty Thoughts of the Editor

The committee on the pigeon department of the Toronto show, to be held in September, have rearranged the classes in accordance with the wishes of a number of exhibitors, which no doubt will make their entries still larger. They have also appointed Charles Wagner as judge, who officiated last year They are particularly anxious to gain the favor and support of fanciers on this side, and any information wanted will be given by Mr. W. A. Bell, of Toronto, who has charge of the pigeon department. We showed a few birds there last year and had no trouble in getting them into Canada after the necessary papers were made out and signed by the proper authorities. and the birds arrived home in good condition, and in but a few days after the closing of the show a check for the full amount of the prize money won was received. We shall call attention to this show later, and hope fanciers who fully appreciate a clean, business-like show will give the Canadians a chance to see some of the birds that do the winning on this side.

—

In an article in the Pigeon News Mr. Geo. D. Eustis, secretary of the Pigmy Pouter Club, calls attention to a point in classification of young Pigmies that deserves attention by both exhibitors and show managers, that is, the giving of cock and hen classes in young birds, and points out the difficulty in distinguishing sex until a much nearer time to the breeding season than at the time our big shows are held, and suggests a fuller classification, making a class for Splashes, which is good sense, as all who attend the big shows know it to frequently happen that cocks are in the hen class and hens sometimes in the cock class. We have always maintained that in the Pouter family, at least, there is very little certainty as to sex until you breed from them; besides, there is not near the competition there ought to be, and such a large number of classes often is the means of an exhibitor winning empty honors through lack of competition, and the genuine fancier wants to beat something when he gets a first prize ribbon and beat enough to get the prizes offered, which are so conditioned that in all but very few instances unless there are "four birds in a class first prize money will be withheld and second prize money paid," and under such conditions (no competition) how can even a winning exhibitor come out whole after paying entry fees and express charges? It's all very well to say that the winning exhibitor gets enough advertising out of it to more than pay him, but a great many that say this are chicken fanciers and are judging the pigeon fancy from the chicken fancy standpoint, while there is scarcely anything in common between the manner in which the two are conducted. There are scores of chicken men who make showing and selling eggs and stock a business. I don't know of but two men in America who do this in the pigeon fancy, most of the latter being fanciers pure and simple, spending yearly much more than they win in prizes and get for stock sold. While they are not in the fancy for what they can get out of it, they do like to get a fair shake and enough to pay the corn bill when they win. We have too many classes at most of our pigeon shows, and if we had less and more competition and better prize money, with the doing away with the necessity of any given number of birds in each class, the show taking the chances of large profitable classes and also the loss of poorly filled classes, we should soon be down to a solid basis of those breeds that were popular, not having to carry a lot of dead wood in the form of unprofitable classes. Show managers figure pigeons as a whole, not in any particular section, and if there are five hundred Tumblers in fifty classes and two hundred of all other breeds in one hundred classes, they will tell you they only had seven hundred birds in one hundred and fifty classes, which is most unfair to Tumblers. This is not a theoretical case. Just look at Boston and Chicago last year on the Tumbler entry and New York with its Jacobin entry.

—

Mr. Andrew W. Hall informs us that Mr. John Waters, the celebrated Jack fancier, has joined the Jacobin Club and has offered a medal for members to compete for at the club's annual meet, and that he is contemplating sending a team of Jacks over for competition as well. This is good news, and it will make matters interesting to have a team of foreigners in the running.

—

From all reports every one who shows is on edge for a few good ones for the Pan-American, and from the way things look there is going to be the biggest lot of pigeons shown there that has ever been brought together on this side, at any rate. F. W. GORSE.

Highlandville, Mass.

Pigeon Hints.

(Continued from May 25th Issue.)

Another effect of weakness in the stock birds, and which may require great care and attention at the hands of the young fancier, is shown by what may appear as an unseasonable and partial moulting of the feathers, but without the accompanying growth of the new covering, the result being that bare patches of more or less extent are produced about the body, and more especially on the neck and breast. In some instances the feathers break off short before being cast, and when examined are found to be very dry, harsh and brittle a sure sign that they have not been properly nourished and that the blood is not in a fit state to supply the nourishment necessary to keep them in a proper state of growth. This complaint is known by several names, such as "rotten moult," "rotten feather," or "feather rot," and has been generally attributed to want of condition, weakness or poorness and impurity of the blood. In the majority of cases it will be found that the weakness is constitutional, inherited from the parent and brought about by too close inbreeding; but it may be only of a temporary nature and produced by a too free use of heating and stimulating grain, such as hemp and linseed, the latter grain being given in some instances to produce lustre of feather. In the former case the weakness generally shows itself in the breeding stock before the season is well advanced, and more or less early according to the state of the weather or the strain experienced in breeding. I have already heard of several such cases, and as this is much earlier than is usual it will give a further idea of the nature of the season so far as it has gone. When the weather is tolerably mild and east winds not much in evidence, the birds may struggle through the season without much perceptible loss of feather; but on a change occurring and the bitter winds become prevalent, it is only a matter of time as to when the disease will show itself. I have known cases when the young of such birds have not shown signs of a similar weakness; but, as a general rule the progeny, or nearly all of them, will quickly give evidence of its being handed down to them, and often in a more marked degree than it was exhibited in the old ones. Such birds would be totally unfit for the purpose of breeding, and when the fact has been clearly proved they should be discarded. Even in cases of a temporary nature they should not be allowed to go on breeding, as this will only make matters worse and intensify the evil, while there is also the chance of complication from other causes bearing on the case. For instance, when in this denuded state the birds are most susceptible to cold and changes of temperature and thus likely to contract colds, roup, etc., and therefore they should be removed to a sheltered and rather warm pen and treated specially for this complaint.

From long experience and the many cases of the kind that have come under my notice I have found that a good tonic, such as Parrish's Syrup of Phosphates, is about the best remedy for giving tone and strength to the system, and, further, when the blood is in an impure state, the addition of a pinch of Epsom salts will have a good and purifying effect upon the life fluid. When the impurity is pronounced evidence of the same is generally shown by a discoloration and sometimes an eruption on the skin, which assumes a yellow or dirty brown tinge. The food should be mostly of a nitrogenous nature, such as peas, lentils and tares, together with only a very little of wheat or dari, while grain of a heating or stimulating nature should be rigorously excluded from the diet. Suitable provision should be made in the matter of grit, old mortar, and finely crushed oyster shell; a bath should be given when the weather is fine once or twice a week, and as soon as the growth is well advanced plenty of exercise in the open air will help in the work of a perfect cure. As an outward application for stimulating the growth of feather the use of palm oil or urine may be of great service when applied to the skin of the bare places. Before closing my remarks on this complaint I would like to call attention to another cause, given by a well-known specialist, viz., an excessive use of limy material such as old mortar. In doing so I must state that my experience on the matter has not led me to a similar conclusion; but at the same time I think it quite probable that an excessive craving on the part of a bird for this class of material might have a bad effect upon the system, and therefore in such a case this material should be withheld or given only occasionally, and in very small quantities.—W. Fellows in the Feathered World, England.

PET STOCK.

White Belgian Hares.

Editor American Fancier: In a recent issue of the American Fancier Mr. Alfred Critchett, Sr., of England, commenting upon an article written by me, says: "Now, after being a fancier for over fifty years, I must say that Mr. H. S. Babcock is quite in error, as I can truthfully say I have bred some thousands of Belgians and have never seen or heard of a white one. It is equally true that no Belgian of the best blood ever had a white one, and what is more, how could it come? There is no white blood in the construction of the hare, and what has been sold to your buyers from this country as White Belgians is simply a fraud. Blacks will frequently come by too long inbreeding, but never a white one."

I tried to be cautious in the article to which Mr. Critchett takes exception, as he will notice by carefully re-reading it. I said: "White specimens also appear among the young, but with much less frequency than the black, and may be attributed either to albinism or reversion. Whether a white rabbit was or was not an ancestor of the Belgian is not absolutely certain, but the probabilities point towards the white rabbit as one of the ancestors." This language indicates a belief upon my part that in some strains at least the white rabbit was an ancestor of the Belgian Hare, but it does not attempt to lay down the statement with the assurance of certainty. There is nothing dogmatic about it.

If we take Mr. Critchett's account of the origin, "A direct cross between a black English and a sandy or yellow, the young bred twice in and out, and then crossed with a rabbit, which was called a hare in Belgium, but it was no other than the Flemish Giant," as absolutely correct in every particular, we have no assurance that a white rabbit was not one of the ancestors of the Belgian Hare. To gain that assurance we need to know just how the Flemish Giant was produced and that one of its ancestors was not white. Mr. Critchett's statements may be true, and yet it may happen that there was

1500 Incubator Chicks
FOR SALE WEEKLY.

Price $15 per 100 from my laying matings, see below. 32-p. Des. Cat. Free
BREEDERS, EXHIBITORS AND SHIPPERS OF

Line Bred (Since 1892) **Exhibition Stock. Line Bred** (Since 1888) **Laying Stock.**

WHITE LEGHORNS, WHITE ROCKS, BLACK MINORCAS,
BARRED ROCKS, WHITE WYANDOTTES, LIGHT BRAHMAS.

EXHIBITION.

$3.00 for 12 Eggs.
$5.00 for 24 Eggs.
$15.00 per 100 Eggs.

The above are from my best matings. I mate no pens to produce prize Exhibition Cockerels and Pullets from same pens.
Elegant descriptive catalogue free.

The Kind to Exhibit.

LAYERS.

$1.00 for 12 Eggs,
$8.00 per 100 Eggs.
$70.00 per 1,000 Eggs.

The above stock bred for years for egg production. Birds true to shape, color, markings, and of good size. Mated with the laying blood males, will surely produce.

somewhere back in the ancestry of the Flemish Giant a white rabbit. And it is very certain that, unless prominent breeders in this country are unmitigated liars, rabbits, pure white in color, with the shape of the Belgian and almost the size of the Flemish Giant, have been imported from Belgium as White Belgian Hares. And I am not prepared to believe that those who have made such statements are untruthful. Whether they have been imposed upon or not is another question, but the imposition cannot be a very serious one if their stock possesses true Belgian characteristics.

As these White Belgians have pink eyes, it may be true that they are the results of that mysterious force known as albinism. And as the true Belgian produces black young occasionally, and as black animals and birds, for some unknown reason, are peculiarly liable to the action of albinism, it may be that these white "sports" come through the blacks.

The fact that a breeder never saw in many years of breeding an albino does not prove that albinoes are an impossibility. Thousands of poultrymen, with long years of experience at their back, never saw an albino from their stock; and yet white fowls have been frequently produced from colored fowls. Years ago I bred the Black Russian fowl, and from as fine a pen of this variety as I ever saw one pure white chicken was produced. I once owned a White Pea-comb Plymouth Rock cockerel that was bred from a pen of very dark, barred birds. And white fowls have sprung from nearly all the varieties of black fowls. White deer have appeared from the red deer, white bears among black bears, and white animals of other varieties from their colored ancestors. Albinism, therefore, is a well established fact, and it need not excite special wonder if an albino should appear among Belgian Hares.

While I have not had fifty years' experience in breeding Belgian Hares, I have had a good many years' experience in breeding fowls, pigeons, dogs, cats and rabbits, and have learned from that experience, as well as from a careful study of the laws of breeding, that many mysteries occur, and, as the French apothegm puts it, "the unexpected is sure to happen."

Let me add that I do not own a White Belgian and probably shall not, unless some of the breeders of the Whites send me one as a testimonial for this defense of the variety, or unless albinism should produce one for me in my rabbitry. I breed the red and the black in the Belgians and find much of interest in them. But I am not jealous of my brethren who think the white "the pink of perfection."

I am glad that my article called forth this communication from "A Veteran English Fancier," and I sincerely trust that he will be induced to give us "further information" upon a subject which his ripe experience entitles him to speak upon with authority. Although I have been compelled to differ with him upon a somewhat abstruse question of breeding, I have none the less enjoyed reading his direct and forceful article. By the courteous interchange of thought we both, perhaps, may come nearer to the absolute truth, the object of each honest breeder's quest, than we could by locking up our experience within our own breasts. As a reader of the American Fancier I shall be happy to be further enlightened upon the breeding of the Belgian Hare by one whose stock has received the approval of the Council of the National Museum.

H. S. BABCOCK.

BLAIRSVILLE INCUBATORS
formerly Homer City
have been imitated by many but **EQUALED BY NONE.** They are scientifically constructed, simple, safe, easy to operate and efficient. *Catalogue Free.*
The Blairsville Incubator Co., 114 Lane St., Blairsville, Pa.

IT IS A FACT That our Breeding Pens of Black Minorcas contained more noted prize-winning birds than any two yards combined. We have raised from them the **LARGEST** and **BEST** flock of chicks we have ever owned.
Prospective buyers will do well to consider **THESE FACTS** before buying and send stamp for our new Catalogue.
SANTEE & ANDRUSS, Canandaigua, N. Y. 84-85

Pierce & Co., 1st, 2d, 3d cocks. 96¼, 95¼, 95¼; 1st, 2d, 3d (tie), 4th hens, 96, 95⅛, 95¼; 3d, 4th cockerels, (tied 2d), 95¾, 95¼; 1st, 2d, 3d, 4th pullets, 96¼, 96¼, 96¼, 96; 1st, 2d pens, 192 9-16, 191 5 16; also best display. This was made in hot competition, 78 birds in class. This record with our wonderful winnings at Chicago last year stand alone and unequaled on this variety. W. C. PIERCE & Co., Indianapolis, Ind. 73–24

BEAN'S BUFFS are the real winners as the following records for 1900 will show: At Cambridge, N. Y., one 1st, four 2ds, three 3ds; Watertown, N. Y., two 1sts and three 2ds; Poughkeepsie, three 1sts and three 2ds; Dryden, N. Y., four 1sts and two 2ds; Trenton, N. J., one 1st and two 2ds; York, Pa., five 1sts and four 2ds; Lancaster, Pa., four 1sts and two 2ds; Hagerstown, Md., in the hottest competition of the year, four 1sts, two 2ds and three 3ds. This is an unequalled record. Write for prices on show and breeding birds. All my stock is farm raised. Address F. G. BEAN, Fairview Village, Mont. Co., Pa. 73-24

"PARALLEL(—) BAR" Rocks.—Eggs during March and April, $2 per 13; $8 per 100. Stock direct blood of Gardner, Thompson and Montauk. New York winners. My birds have won in good company and chicks from these eggs will win for you. Send for leaflet. H. T. BROWN, Box 471 a, White Plains, N. Y. 79–30

BARRED PLYMOUTH ROCKS.—The 1st prize hen at the Johnstown show was pronounced by competent judges the best of the season. She won in the very hottest competition; so did my other hens. My stock is only of the very best and held its own at leading shows of America. Stock and eggs for sale. Eggs $2 setting. JOHN C. RICE, Johnstown, N. Y. 90–tf

JAVAS.

JONES. the "Java Man."—Mottled Javas, Blk. Javas and Silver Duckwing Leghorns. Satisfaction every time or your money back. Eggs $3 per 15 and no reduction. JOHN R. JONES, Suffield, Conn. 39tf

WYANDOTTES.

ALPHA STRAIN Silver Wyandottes. Winners wherever shown. Have good combs and shape, standard weights and plumage. They are line bred and good layers. Look up my record in the Fancier. Eggs, balance of season, $1 per setting. WM. BINGLEY, 103 McKinley St., Torrington, Ct. 75–26

GOLDEN Wyandottes direct from Wray Bros., London, breeders of finest goldens. My prize winning females are mated to 1st cockerel, great Ontario show, Guelph, Dec. 11–14. Eggs reduced to $1.50 per 13 for balance of season. A good hatch guaranteed. W. J. CANN, Plattsville, Ont. 03–05

BUFF WYANDOTTES exclusively since 1894. I haye them as good as grow; and have been winners wherever shown. Breeders and show birds for sale at reasonable prices. Guaranteed fertile eggs from my best pens, $2 per 15. W. P. PRATT, Chatham, N. Y. 02–04

MADISON SQUARE Garden Winners. We have won 1st prizes two successive years at the above show on our White Wyandottes. 1901 won 1st hen, 3d and 5th pullets and 3 specials on 6 entries, 1900, won 1st cock, 3d hen and 2 specials. For the balance of season, will sell eggs at $1 per 13. Booklet free. ALLEN C. ROBERTS, Spring City, Pa. 02–tf

"WHO KILLED COCK ROBIN?"—Robbins' Buff Wyandottes are the real Buff with solid Buff wings and tails, and have won prizes in Boston, Cambridge, Rochester, Syracuse, Troy and Poughkeepsie, N. Y.; Brattleboro, Vt. and Philadelphia, Pa. I have all my prize winners in my yards and will sell eggs at $5 per 13 straight. Stock for sale at all times. Satisfaction guaranteed or money refunded. R. B. ROBBINS, Cambridge, N. Y. 42–tf

PISER'S BUFF WYANDOTTES are always winners. One year ago at Cambridge, N. Y., in the hottest competition ever known, I won 2d, 3d pen old, 1st, 2d pen young, 1st, 3d hen, 1st, 2d, 3d cockerel, 1st, 2d, 3d pullet. My customers are doing the same all over the country and in Canada and England. A pen from my yards will breed you winners next season. See add in display column. L. C. PISER, Shushan, N. Y. 77tf

EGGS for hatching from Silver Wyandotte Birds. All prize winning stock, $1 per sitting. Address W. H. LOCKERBY, Waverly, Tioga Co., N. Y. 92–04

AT BOSTON on 23 entries in Golden and Silver Wyandottes, we won 26 prize ribbons. At New York, we won 1st cock and 1st cockerel, Silver Wyandottes. We have 30 fine breeding Golden and Silver Wyandotte cockerels for sale. We breed from only the choicest birds. Eggs for hatching, $2.50 per 15, $8 per 100, 80 per cent guaranteed fertile or order duplicated at half price. WOOD & FREEMAN, Box 2, Fitchburg, Mass. 84–35

HENS WILL SIT
and do their level best when given the right kind of a nest, the right number of eggs, the right kind of food, the right kind of care and dusted with the right kind of insect powder. For this latter purpose Lambert's Death to Lice fills all of the requirements.

EGGS WILL HATCH
when the breeders are kept free from lice, and when they have daily out door or scratching shed exercise. Under these conditions eggs from healthy birds are usually well fertilized. When good eggs fail to hatch the trouble is often outside of the eggs. Lambert's Death to Lice Powder never injures the fertility of eggs for hatching, the sitter or the little chickens should they hatch in a handful of it.

CHICKS WILL GROW
when started free from vermin and kept so from the shell up. If allowed to become lousy they lose strength and vitality, which will stunt them in growth or cause an early demise. More chickens die every year from this cause than any other, while a little Death to Lice Ointment would save their lives. 73-24

DEATH TO LICE REMEDIES:
Death to Lice Powder for dusting layers and sitters—5 oz. sample, 10c postpaid; 48 oz., 50; 100 oz., $1.00, from here or nearest agency to you by express. Death to Lice Ointment for head lice on children or chickens also scaly shanks on fowls, 10c and 25c postpaid. Death to Lice Special, for making a liquid louse or mite killer and for mixing with the regular powder for fleas on dogs, moths, etc., 4 oz., 10c; 16 oz., 40c by mail postpaid. Death to Lice Liquid for spraying poultry houses, painting roosts, etc., (already prepared) 1 qt., 35c; 2 qts., 60c; 4 qts., $1.00, f. o. b. here. Book and "How Best to Set a Hen" sent free. **D. J. LAMBERT, Box 248, Apponaug, R. I.**

First Prize Pen at New York.

"RINGLETS" SOAR STILL HIGHER.

AT THE IMPERIAL SHOW OF THE NATION— MADISON SQUARE GARDEN, N, Y., THE WORLD'S RECORD OF

E. B. THOMPSON'S BARRED PLYMOUTH ROCKS

4 YEARS IN SUCCESSION was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ever accomplished in the annals of the **New York Show; Winning** during **4 years in succession MORE THAN THREE TIMES AS MANY 1ST PRIZES** as any other exhibitor, and as many **1ST PRIZES** as **ALL COMPETITORS COMBINED,** besides more **than twice as many Cups** and **Specials** as all, including the **superb challenge Trophy,** value **$100,** for best cock, cockerel, hen, pullet and exhibition pen; **$100 Sterling Silver Cup** for finest exhibit, **Grand Special Prize Sweepstakes Cup** value **$100** presented by the **President** for best P. Rock cock, cockerel, hen and pullet, any variety. My clean sweep of

FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES

on pullets has never been approached in Madison Square Garden, and stands alone and unequaled.

The world's record of 1st on exhibition pen at New York 3 years in succession is the undisputed Champion. With their 1900 record the **"RINGLETS"** have won at New York a grand total of **77 PRIZES. 31** of these prizes are 1st and specials, being 17 more 1st and special prizes than won by any competitor in the history of the show. Rare bargains in yearling breeders in lots of a trio or 100. Show bird fit to win in the fastest company. Richly illustrated 24-page catalogue on application. Elegant breeders in any number. Eggs from finest exhibition matings, 1 sitting, $5; 2 sittings, $9; 3 sittings, $12; 4 sittings, $15. ADDRESS 91-tf

E. B. THOMPSON, Amenia, Dutchess County, New York.

MUFFED TUMBLERS FOR SALE.

WINNERS IN ENGLAND AND AMERICA.

The grandest collection of winning Muffed Tumblers ever gotten together is now on sale, and can be seen by appointment and birds selected. I will sell any Muffed Tumbler I own and arrangements can be made to take the entire lot. The varieties are Blue Saddles, Black Badges, Black Mottles (Yellow Rose cock, 1st Boston and Chicago, price $15, one of the best living) and several other odd birds, all winners or will produce winners. My Tumblers possess characteristics peculiarly their own, having been bred carefully for years, and are streets ahead of any other strain. In the past five years I have bred more winners than all others combined. Stock birds sold to others have bred their best birds; why, then, waste time and money by breeding from ordinary stock, when for an ordinary outlay the best birds living can be obtained? Those who would like to win and breed winners are invited to correspond. Prices very low, but nothing in muff legs under $5 per bird. (Some as low as $2.50 in surplus Clean Legs.) Testimonials from dozens who have purchased winners in all parts of the country. Satisfaction guaranteed. State wants fully. See winnings at Birmingham, Eng. (1st and medal), Boston, Chicago and New York. While winning here I had a team of six winning at Birmingham, Eng., the greatest Tumbler show in the world, irresistible argument as to the quality of my stock. 48tf

F. W. GORSE, Box 228, Highlandville, Mass.

S. C BROWN LEGHORNS..

My birds are equal to the best. Have won more prizes on a given number of entries than any Leghorn breeder. Circular, free, will prove this. At Boston this year, 3 entries, 2 1sts, 1 3d; at Erie, 1900, 1st pen, 1st cock, 2d hen, 1st c'k'l, 1st, 2d, 3d, 4th pul, $5 spec. 10 highest scoring Leghorns, special best trio, silver cup best ck, ckl, hen, pul, a showing of 121 Browns. Eggs, $2 for 15. 93-tf

L. O. BROMLEY, SILVER CREEK, NEW YORK.

Now is the Time you want Eggs

By feeding your fowls a little

BANNER EGG FOOD AND TONIC

your hens will lay lots of eggs, and you can double your profits, as this is the season of the year when fresh laid eggs are scarce.

REMEMBER, this TONIC does not force your hens to lay; it only brings them up to the pink of condition which is necessary for egg production.

TO THOSE who have never used it, we simply ask you to give it a trial, and be convinced.

CIRCULATION WORLD-WIDE.

The American Fancier

A WEEKLY JOURNAL DEVOTED TO

Poultry, Pigeons and Pet Stock.

VOL. XVI. NO. 405. JOHNSTOWN, N. Y., SATURDAY, JUNE 8, 1901. PRICE FIVE CENTS

ADVERTISEMENTS CLOSE TUESDAY NOON.

Winner of 1st at Pittsburg, Feb. 18, '01. She and five other pullets we had at this show were hatched in June. All were above standard weight and all laying at the time. During the 6 days of the show this pullet and the winners of 2d and 3d prizes laid 16 eggs. That is why we like them; they are able and willing to lay eggs. This pullet, more than the other two, has the "egg shape"—The others are more typical Wyandotte in shape and we expected them to win over her;—but judge Drevenstedt said: "This one is good enough for me."

We have in our Partridge Wyandotte yards at Beaver Hill Farm

FIFTY NINE FEMALES.

Sixteen of these have been entered a total of 20 different times this year at seven leading shows, including New York and Chicago, and have won

Eight First, Four Second, Four Third and Two Fifth Prizes, getting left only Twice.

Six of our seven males now mated with these females have, at the above shows, won

Eight First, Two Second, Three Third, One Fourth Prizes in remarkably hot competition.

Busy as Beavers are the Birds on

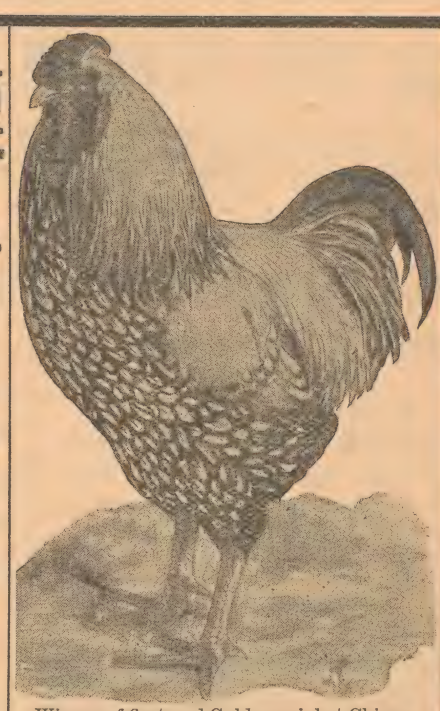
SILVER AND PARTRIDGE WYANDOTTES AND SCOTCH COLLIE DOGS.

Of these last we now have some fine youngsters ready for shipment.



The proprietor of Beaver Hill Farm began breeding Silver Wyandottes twenty years ago. He helped to make and revise the Standard for them. He breeds the Whittaker strain exclusively and adheres to Line Breeding and Single Mating Methods. :-: His Booklet on WYANDOTTES Free for the asking.....

..Prices of Eggs Reduced for June..

SILVERS $2 SETTING; 3 SETTINGS, $5.
PARTRIDGE $3 SETTING; 3 SETTINGS, $8

A few Breeders of both varieties for sale soon.

BEAVER HILL FARM, BEAVER, PA.

Winner of first and Gold special at Chicago, 1901. Also head of first pen at Pittsburgh.

We have in our ten breeding pens at Beaver Hill Farm, a half dozen male Silvers that we esteem more highly than this one; but he was considered good enough to be worthy of the following:

A FEW OF THE MANY PRESS COMMENTS.

1st cock, good shape, nice silvery bird, firm in wing bars, open laced and clean all through, one of the best handled this season.—AM. FANCIER.

The best Silver Laced Wyandotte cock that we have seen; grand shape and color, an all around good bird.
FANCIER'S GAZETTE.

A cock that is a wonder in the perfection of form and color.—COM. POULTRY.

1st pen one of the attractions of the show; three of these females are exceptional beauties, the other being a trifle darker than the rest. The cock is a grand bird in shape and color, a treat to look at.—[AM. FANCIER'S comments on the Pittsburgh First Prize Pen.

Champions at Pittsburg, 1901....

BUCKEYE CHIEF.

In a class of 162 we won 1st and 4th on cocks; 2nd cockerel, (losing 1st on condition, easily best male in class); 2nd and 3rd hens; 3rd and 4th pullets; 2nd breeding pen and our 1st cock and 2d cockerel were the talk of the show.

AT CANTON we nave been holding the reins for years. 1898, Bridge, judge, 1st cock; 1st cockerel; 1st and 2d hen; 1st and 2d pullet. At Canton, Jarvis judge, 1st cock; 1st hen; 1st and 2d pullet; 3d cockerel; 1st pen. Canton, 1900, Lambert judge, 1st ck; 1st cockerel by error of 3¼ points in weight; 3d pul; 4th and best of all, 1st breeding pen. Canton, 1901, Myers judge, 1st cock, 92½; 3rd cock, 92; 1st cockerel, 94; 3rd cockerel, 92¾ and A CLEAN SWEEP OF 1st, 2d and 3rd PULLETS, 94¼, 93½, 93¼; 3rd hen, 92½; 1st breeding pen 187.

Besides this I have sold the winners for many shows this season.

EGGS I sold last year produced winners! Why not book you for a few settings and for once in your life have Barred Rocks of standard shape and color? Don't hesitate, but send stamp to-day for my illustrated catalogue explaining all.

"Profitable Poultry Keeping in All its Branches."

This is the title of the new and elegant Catalogue issued by the Cyphers Incubator Co., for 1901. It contains 224 pages, 8x11 inches in size, over 200 fine new half-tone illustrations and a wealth of interesting, down-to-date matter, covering the subject of **Poultry for Profit** in all its branches.

This is a Brand New Book,

not a re-hash of old ones. Contains special articles written by experts, and illustrates and describes over fifty of America's largest and most successful Duck, Broiler, Roaster and Egg Farms. It also contains the endorsements of over one hundred of the foremost breeders of this country—men and women who are using the **Cyphers Incubators**—and shows photographic views of many of their poultry plants and favorite poultry houses. Ask for Book No. 9 enclosing 10c in stamps, and address nearest office.

TYPOGRAPHICAL UNION LABEL FULTON COUNTY No 256

SATURDAY JUNE 8 1901

From the Editor's Perch.

In our issue last week a special dispatch from Buffalo, N. Y., was published regarding the extra inducement offered to New York State exhibitors by the New York State Commission. The following just at hand will throw further light on the matter:

Buffalo, N. Y., May 31, 1901.

Editor American Fancier: Arrangements have been made by Superintendent Converse, of the Division of Live Stock, Pan-American Exposition, with the New York State Commission whereby all prizes won by New York State breeders in the Live Stock Division will be duplicated by them to the amount of $5,000. It is estimated that this amount will double the cash winnings of every exhibitor from New York.

GEO. H. BURGOTT,
Supt. of Poultry,
Pan-American Exposition.

***

The above should prove an incentive to every breeder of thoroughbred poultry in the Empire State to show "his best." It is a fine example to set and worthy of the great state of the Union.

***

Ira C. Keller, Prospect, Ohio, sent a heavy consignment of Golden, White and Buff Laced Wyandottes to Sydney, Australia, last week. They were rare good ones and the price paid was a long one.

***

"S. G." a subscriber in Pennsylvania writes: "Will you be good enough to answer the following question in the columns of the American Fancier of which I am a regular reader: 'What is the proper color of, or the most sought of, for the yolk of an egg?"' The color most desired is a rich orange. A pale yellow yolk is not particularly pleasing to the eye when eggs are served boiled, poached or fried. But a really fresh egg with a pale yolk is very much superior to an egg with a rich colored yolk and a musty odor.

***

The above reminds us of the caption given one of our editorial remarks reprinted by our esteemed contemporary, Farm-Poultry, viz: "A View of the Egg Situation that is Peculiar for a Poultry Paper." The only thing peculiar about our statements is that they tell the naked truth. The writer of these notes spent five years in the egg business way back in the eighties and even since he divorced himself of that, he has found the same slack, if not dishonest, method of marketing eggs. An American poultry paper should not spare the penny-wise and pound foolish culprits that injure a trade that would be worth millions of dollars to the country. Although we are not conducting a strictly practical poultry journal, we cannot help preaching a practical sermon on the egg question every now and then. The hen that lays a fresh egg has a right to be vindicated and the farmer or poultry raiser that libels the hen is a pretty poor individual to elevate poultry culture in the United States.

***

We are informed that J. C. Haynes, Annandale, N. J., and B. W. Mosher, Johnstown, N. Y., will be assistant superintendents at the next New York show. A better pair cannot be found. "Jack" and "Barney" will make a great team.

***

Dr. T. F. McGrew has written a bulletin for the United States Department of Agriculture. It is all about Barred Plymouth Rocks, their origin, history, breeding, mating, economic value, etc. It is in press and will shortly be disseminated by the department.

***

Reports from the New England states indicate rather poor success in hatching early set eggs. The unusually wet May has set back the chicken season considerably but in this section the youngsters are very thrifty, the splendid growth of grass, the abundance of grubs and worms have pushed 'em right along, notwithstanding the daily showers.

***

Good shelter, dry quarters to roost in and pure, dry, sound grain food will help the chickens through considerable wet weather. But the careless, slovenly system of wet mashes thrown on a board over the ground will make a big hole in the broods.

***

The month of June is one of the best in the year for hatching out Leghorns, Hamburghs and Bantams excepting in very hot and dry sections of the United States.

***

We state the above in order to dispel the illusion that the egg season is practically over by the first of June. Shrewd fanciers who exhibit at the late winter shows set eggs this month. In fact, one of the best Buff Cochin pullets exhibited two years at Boston was hatched about July 1st. But Asiatics and Americans require great care in feeding and handling during the summer months.

***

Mr. B. W. Mosher, Johnstown, N. Y., has been added to the list of judges at Cambridge, N. Y. He will handle the Turkeys, Ducks and Geese, as well as several other classes in the poultry division. "Barney" is not only a first-class superintendent of a poultry show, but an excellent judge of many varieties of fowl.

***

As we go to press we learn that the Fulton County Agricultural Society has thrown open its poultry department so that the entire world can compete. This is a radical departure and will create a great change in the poultry affairs of this vicinity. At present it looks as if Johnstown will strive to hold one of the greatest fall shows in the United States. Full particulars will appear in our next issue.

***

Mr. Harry M. Lamon has taken up Barred Plymouth Rocks and promises to make some lively hustling in the "Rock" alley next season. Harry is a very large sized star in the Buff Leghorn division, and no doubt will prove his right to a place in the stellar "Rock" heavens.

***

A writer in the National Fanciers' Journal remarks:

"When Game men get started they make things interesting, and Mr. Glasgow has caused that result. But their discussion need not make us tremble for the future of the little chicks that are running around our yards. I have a nice lot of them, and a fair proportion of them will reach maturity. If there is any trouble with the Exhibition Game, it is in the years where in-and-in breeding has been practiced. We must be careful not to breed one line until all the stamina is lost. Introduce new blood and the trouble of weakness will be remedied."

Why always attribute failure in stamina to in-and-in breeding? The latter carefully and scientifically carried out produce the finest specimens without any particular loss of stamina. The introduction of new blood is liable to spoil the work of years of careful and intelligent mating. "Blood will tell," and the purer it is kept the better the results. There may be times when an out-cross is necessary, and then most particular care is required in selecting the new blood, and, as a rule, it should be introduced on the female side only.

***

Mr. Ralph Chant, the poultry sage of the Cayadutta, Johnstown, N. Y., is perfecting a strain of Cuckoo Dorkings that he thinks will startle the admirers of this great English fowl.

***

Is the Indian Runner superior to the Pekin duck as a layer? This question has been answered in the affirmative a number of times by breeders of the Indian Runners, but several well known Pekin duck fanciers claim that it is not so. It is also claimed that Indian Runners are not as easily reared, nor will they attain the growth a Pekin does in the same number of weeks. We would like to hear from those of our readers having experience in the above breeds.

***

J. A. Shineman, Fort Plain, N. Y., writes:

"I have an egg record of a few Barred Rock pullets kept for a short time previous to setting, which shows that Barred Rocks are layers. No. 11 and 12 which were 1st and 3d Amsterdam pullets, December 1900, laid 50 eggs in 30 days; No. 37, a very choice pullet, laid 31 eggs in 36 days; No. 38, a sister of my 3d Johnstown cockerel, laid 32 eggs in 33 days, 21 days in succession, then skipped one day, then 11 days in succession. It is possible that this pullet laid 33 eggs in 33 days, as she took her nest on the 22d day, but I failed to get her egg; she may have destroyed it. All of them laid more eggs during the breeding season but no longer record was kept."

Thoroughbred fowls like thoroughbred horses and cattle will make their mark always.

Late Hatched Chicks Profitable.

Editor American Fancier: I find that owing to the poor hatches in early spring many breeders are planning to set eggs through June. It takes more care and knowledge to raise these late hatched chicks than those who begin in March and April. Eggs are so fertile, the June chicks so lively, that we grow careless in taking time in looking out for the downy birds.

It takes skill to get size on to any of the American breeds, late hatched, before cold weather

During the hot summer days lice multiply rapidly if not fought from the start. A few on the mother hen or an infested brooder means dead chicks to an extent that few poultrymen realize. The loss of a few chicks quickly covers the cost of a good insect destroyer. Fight lice before the chicks appear. Have the hen free from insects while on the nest and the brooder and coops clean and free from vermin when the chicks are put into it.

Extra good food pays during warm weather. In addition to a good grass run, it is good judgment to feed hulled oats once each day. Whatever I may give my hens, I always feed the best white wheat to my growing stock the last thing at night. If it was not for getting the animal food into my chicks I should not feed a mash. Green bone would save this for many, but I am not so fixed as to be able to use fresh meat or bone.

Shade from hot sunshine must be at hand. The coop or brooder is not enough. Shade trees or bushes furnish an ideal protection. In the absence of these, set up stakes and cover with boards or brush—any arrangement to shut out the sun's rays and at the same time let the air blow under.

Fresh water is necessary to get good growth. Birds dependent on thick, bad smelling water develop illness to an alarming extent

Dry and clean quarters must be furnished at all times to get the best results. A leaky roof means a wet, filthy floor, a factor in many an outbreak of roup in the late fall. Unremoved droppings are a good breeding ground for the "red mites."

Some of the best breeders of this season were hatched last June. Wyandottes hatched in early summer come into good show condition in December and January. The late birds have a tendency to show extra good color of feather. This is especially true of the Buff varieties.

June and early July hatched chicks are profitable if they are given a good opportunity to do their best. Eggs are fertile, the weather is warm and settled, green food is abundant, most breeders reduce prices for eggs. The best egg record hens I ever owned were hatched in June. DR. N. W. SANBORN.

(Continued from June 1st Issue.)

CRAMMED V. NATURAL FED CHICKENS.

It is sometimes asked if it pays to use the cramming machine. To answer this question, a lot of some fifty chickens which had been feeding from the V-shaped trough for two weeks were divided into two groups.

The first group was fed for the next ten days from the V-shaped trough and the other group from the cramming machine. The conditions and the feed were the same in every particular.

The chickens that were fed from the trough consumed in ten days' feeding forty pounds of grain and an equal amount of milk. The grain cost $1.20 per 100 lbs., the milk 10 cents per 100 lbs., the total cost of feeding being 52 cents. They gained five pounds in weight and the cost per pound of gain was 10.2 cents.

The chickens fed by the cramming machine consumed fifty pounds of grain and a hundred pounds of milk, which, at above prices, would cost 70 cents. The amount gained was seven pounds eight ounces and the cost per pound of gain for this lot was 9.33 cents.

When ready to kill each bird was carefully numbered, so that there would be no mistakes as to the lot to which each chicken belonged, and after being dressed they were divided into two lots, one of which was shipped to Montreal and the other to Toronto. The dealers were asked to give, if possible, the values or selling price of each chicken in their reports. Those going to Montreal had, in addition to individual numbers, marks as lot 1 and lot 2.

The dealer in Montreal reported lot 2 to be the most desirable chickens, but made no discrimination in price between the lots. Lot 2 were the birds fed from the cramming machine.

The dealer in Toronto furnished the following report:

No.	Weight.	Price per lb. obtained.	REMARKS.	Breed.	How fed.
	lbs. oz				
87	4.	12	Light cream color, high breast bone, not enough meat...	grade	From trough
88	4.10	11	" " could stand more meat.....	P. Rock	" "
108	4 7	12½	" " enough meat and not too fat.....	grade	" machine
90	5.2	12½	" " enough fat, lots of meat.....	P. Rock	" trough
104	3.	12	" " small frame, fat enough, could stand more meat.....	grade	" "
91	3 12	12	" " small frame, could stand more meat..	scrub	" machine
95	7.4	14	" " lots of meat and not too fat, exceptionally fine bird.....	P. Rock	" "
107	3.4	12	" " small frame, could stand more meat, enough fat.....	grade	" trough
97	5.	13	" " nice and plump. not too fat.....	grade	" machine
89	4.4	12½	" " nice and plump, not too fat.....	grade	" "
101	4.8	12½	" " not much fat, could stand more meat.	P. Rock	" trough
103	3.6	12	" " enough fat, could stand more meat...	grade	" "
102	5.5	13	" " lots of meat and not too fat.....	P. Rock	" "
105	4.	12½	" " fat enough, good frame, could stand more meat.....	grade	" "
98	3.10	12	" " fat enough and quite a lot of meat for such a small frame.....	grade	" machine
38	4.2	12½	" " very thin and a crooked breast bone..	scrub	" trough
39	4.2	12½	" " could stand more meat also more fat..	grade	" "

In some instances, the numbers were removed or otherwise lost, in which cases no report is given. By taking the average weights of the two lots when they were weighed here, we find that the machine fed chickens were about one-half pound each heavier, and in the report from Toronto it will be noticed that the average price of the crammed chickens is nearly threequarters of a cent per lb. higher than the price of the others.

SUMMARY.

1. Scrub or barn yard fowls are very poor feeding and selling class of stock.
2. Crammed chickens are more meaty than those fed from the trough.
3. As a rule, pure bred chickens of general purpose varieties are a better selling class of stock than scrubs or low grades.
4. Heavy chickens sell best.

EGG PRESERVATION.

Several methods of preserving eggs have been tested during the year. The eggs for this purpose were taken early in June and were tested in December. Many of the same methods that proved fairly successful last year were again tried.

Method No. 1.—A solution was used composed of one part water glass (sodium silicate) and five parts water that had been previously boiled. This was a very strong solution, and unless an egg was absolutely fresh it would not sink in the solution. The eggs from this solution were of fairly good flavor and all were well preserved.

Method No. 2.—This was similar to No. 1, except that eight parts of water were used instead of five parts. The eggs in this were nearly as good eggs as those from No. 1. This is a good preservative where it is desired to keep summer eggs for winter use.

Method No. 3.—This was composed of ten parts of water to one part of water glass. There were no bad eggs in this solution, but the eggs were inferior in flavor and in poaching quality to those kept by methods No. 1 and No. 2.

Method No. 4.—This consisted of the same solution as No. 2, but in place of allowing the eggs to remain in the liquid they were removed after having been in it for a week, except the last lot which was put into the solution. This lot was allowed to remain the remainder of the season.

(a) The eggs, after being in the solution for a week, were removed and placed in an ordinary egg case in the cellar. They were all good when tested, but had evaporated considerably and were lacking in flavor.

(b) These were the second lot of eggs to be placed in the liquid. They were handled similarly to those in (a) and were of about equal quality.

(c) These eggs were allowed to remain in the liquid. They were well preserved, all being good. They were scarcely equal in quality to those from No. 2 method, but were superior to those from No. 3.

Method No. 5.—A lime solution, made as follows: Two pounds of fresh lime were slacked in a pail and a pint of salt was added thereto. After mixing, the contents of the pail were put into a tub containing four gallons of water. This was well stirred and left to settle. Then it was stirred thoroughly the second time and left to settle, after which the clear liquid was poured over the eggs, which had previously been placed in a crock or tub. Only the clear liquid was used. These eggs were well preserved, but those from the bottom of the tub had a decidedly lime taste and the yolk in them was somewhat hardened.

Method No. 6.—Common air slacked lime was used. The eggs were placed small end downwards, and no eggs were allowed to touch the adjoining ones. These eggs were all bad.

Method No. 7.—Common salt was used for this lot in the same manner as the air slacked lime. Some of these eggs were spoiled and all were at least one-third evaporated.

C. H. Latham.

BARRED PLYMOUTH ROCK SPECIALIST.

Near the station at Lancaster, Mass., is located the yards of C. H. Latham, who breeds the beautiful clean barred Plymouth Rocks. We passed a pleasant hour with him and his barred beauties a short time since. Mr. Latham has all of the winners of the past two winters mated with a line of well barred specimens that promise to bring forth better than have ever come from his yards. We could not help but notice the soft light color of some of the females in the mating. These are line bred for years back in the blood and science of double mating.

Mr. Latham shows strongly his belief in the value of double mating through his matings, which we studied and made record of, hoping to go there again before the snow flies that we may see in the yards the result of these matings. Mr. Latham has many fine individual specimens. These are mated with females that are known to have produced his best. In this way no guess work is indulged in, for so sure as like will produce like, or that those that have produced good quality will do so again, just so sure are these matings to do better than in former years.

Mr. Latham has a fine lot of chicks in sight. His spring trade for stock and eggs has been beyond his ability to supply and the egg trade still continues. We saw his lot of beautiful Plymouth Rock or Scotch Grey Bantams. They promise to be an attractive variety of Bantams that we believe will become very popular. McG.

Had the Hens in His Sack.

Judge Warren W. Foster, who for the past month has presided in Part I. of General Sessions, New York City, is still wondering why the jury acquitted High Reach Reginald of the larceny of two Leghorn chickens discovered by the owner's servants still warm within his possession. Not even the police have discovered the identity of High Reach Reginald, alias Lonely Hughes, some time steward of Section 10 of the Perpetual Peripatetics, and the indictment charging him with grand larceny in the second degree, causing his ultimate trial and acquittal before Judge Foster, does not even attempt to suggest the name of his forefathers. It simply sets forth in the usual legal verbiage the various counts of his alleged crime specified under certain sections of the Code of Penal Procedure.

The opening of Assistant District Attorney Lindsey Gordon set forth the following facts: That upon the night of April 29 the farm hands of George Conkling, a well to do agriculturist of the Bronx, were awakened by strange and suspicious sounds emanating from the hen-house. The sounds were unusual and suggested disaffection, if not actual rout, among the feathered stock of the farmer. The farm hands from their different cots in the outhouses rose simultaneously and precipitated themselves in the direction of the main hen roost. When they arrived they found that the hennery had been forcibly entered and certain of the flock eliminated. In the stillness of the night they heard the clatter of hobnail boots upon the macadamized road leading to the city and instinctively turned in that direction.

The chase was an exciting one and led for two miles. Upon the ultimate capture of the supposed thief the farm hands formed in a circle about the prisoner, presenting pitchforks, spades, rakes and other farming utensils. They asserted on the stand that they found within the clutch of his strong right hand a gunny-sack, in which were the bruised bodies of two Leghorn hens still warm. Blood, they said, was upon the hands of the prisoner and he was panting as if from great exertion.

High Reach Reginald, alias Lonely Hughes, the captured one, had an entirely different story to tell of the possession of the two fowls to the court. His story, much to the surprise of Judge Foster and the chagrin of Assistant District Attorney Gordon, was believed by the jury and he was acquitted. He accounted for the possession of the gunny-sack and the two Leghorn hens after this manner:

"Adversity had compelled me to the road. Some days before, when I was elected steward of Section 10 of the Perpetual Peripatetics, in order to properly celebrate the occasion I exchanged my portmanteau and wardrobe for a gunny-sack and a flannel shirt. In the course of time, I regret to say, the shirt was surreptitiously borrowed. On the night involved in the present issue, not having arrived at an agreeable hostelry, I reclined on a mossy bank by the roadside. In one hand I clasped my purse, in the other the gunny-sack. Then occurred a lapsus memoriam. I cannot state its exact length. I was awakened suddenly by a remarkable strife within the gunny-sack. I am sensitive and sometimes hysterical. I smote the gunny-sack with brutal force, at the same time twisting the mouth of it closed. My first impression was that some beast of the forest escaped from the Zoo was inside of it and my only salvation lay in immediate and strenuous action. Before I had time to ascertain the true nature of the contents I was surprised and set upon by a small regiment of bucolic persons redolent of the pigsty and new mown hay. They arranged themselves about me in belligerent attitudes and became very insulting with their insinuating accusation. That is all."

During the course of the trial Bill, the old elevator man, lifted many strange passengers in his car to the General Sessions floor. Bill is outspoken and to many of the frowsy, bearded men who intermittingly drifted into his car he philosophized—recommending various soaps, surf bathing, the river, steam sweepers and certain humble though skilful tailors. Bill is never obtrusive, simply eloquacious, but Eagle, the fat door man of Part I of General Sessions, is always officiously careful of who goes in or out of the court room and to the unkempt ones he presented an obdurate front. Membership cards of Section 10 of the Perpetual Peripatetics were of no avail, and Long Reach Reginald's pals were compelled to keep "a moving" about the corridors until his acquittal. When he was finally freed, however, he was escorted with imperial pomp to Centre street and thence—neither the police nor Josiah Flynt knows the address of the lodge rooms.

Stearns New Model No. 7
Ball Bearing Bone Cutter
Back Geared Three to One.
It is geared to save power, making it the easiest running, fastest cutting bone cutter ever built. It will cut anything a fowl will eat—green or dry bone, gristle, meat, corn or vegetables. Self-regulating. *It cannot be clogged.*

Green cut bone brings the young chick to maturity quicker than any other food. Our book, "How to Make Poultry Pay," explains how and why. Sent *free.*

—Pigeon men and hen men should push the American Fancier. Advertisers claim they get better results than from any other paper.

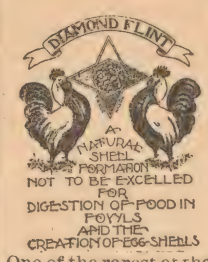
My Experience with Bantams

Editor American Fancier: I look back to the time when I was a country boy living in a small village on Long Island and to the day that I first became the owner of a pair of Bantams. They were of a common breed and I purchased them for one dollar. After the birds were safe in my run, I felt that I now had some place in the world, and well remember how careful I was of them, never forgetting to run to my father's corn bin and carry them corn (until he stopped it), and of how proud I was of my over fat birds. Eggs were very few, but that did not trouble me, for I knew that they were only Bantams. But the day came when the fever took hold of me, and do what I may I could not shake it off. I became dissatisfied with my common bred birds and wanted something that I could look at with satisfaction. I had been reading several poultry papers and I well remember how all encouraged the breeding of pure bred poultry. So, after looking over the catalogue of breeds of Bantams, I decided that the birds for me were the Golden Sebrights. After much letter writing, I purchased a pair of nice little birds for four dollars. The birds came and I invited my fellow playmates to come and inspect my purchase, and with them I was counted the luckiest boy in the town. For several years I bred a few and gave away those I did not want to keep, and I kept up my interest by reading.

Just as I began to learn that poultry wanted more care than throwing corn to and giving of fresh water once a week, I was obliged to come to a stop, as my father had decided to go to the city, and my little pets were sold with the rest of the poultry. For a few years, with the change of climate and the entering on a business life, my fever passed away, but after becoming settled once more and the coming of spring my symptoms showed signs of the returning fever. Do what I would I could not get Bantams out of my mind. I would lay awake and think of Bantams, go to sleep and dream of Bantams, and to add to the matter my position was changed and at the next desk to my own there was a young man who was a fancier of the bluest blue, and before long I was raging with my old complaint. Morning, noon and night he would pour into my ears about his birds and his winnings. The show business was something I had not learned of before, but was now very much interested. I tried to hold myself in check, for I realized that I was living now in the city and a married man, with but a small place, and could not think of breeding Bantams.

Again, my eyes were opened by my friend, who said he did not have any larger place than I, and he had experienced the pleasure of having the blue ribbon pinned on his pen at New York. I was then lost, and decided, after much argument with my wife, that I was to have half the yard for my birds and she the balance for her flowers. So I built a small house, enclosing the run with wire so that the birds could not fly over and annoy my neighbors, and then decided, after looking over several Bantam books, to breed the Black Rosecombs, which to this day I never regretted.

I had read and heard so much about there being money in poultry, I made up my mind to try and prove it. My first move was to buy a trio of birds, and as they were good birds I had made the right start. I soon learned that by proper feeding I could get a good number of eggs from my Bantams, and those not used for breeding were used with good satisfaction in the house. The following fall I had a few very good birds and sent a pair to a show-room and was awarded a ribbon, although not first. I felt well repaid. Later on I bought a number of birds from a well known breeder and have tried ever since to improve my birds.



In regard to "Does it pay?" I can say with all honesty that I am more than repaid for my trouble in the enjoyment and pleasure I get, saying nothing about money received from the sale of birds and eggs. My experience had taught me that if I wanted success I must have better accommodations for my birds. So about two years ago I built a house suitable for about twenty-five birds, with laying and scratching rooms.

No doubt some who will read these lines would like to breed Bantams and feel that they cannot owing to lack of room. To them I say you can, but do not overcrowd your space. Be content with a few and give them the attention that is needed and they will get along all O. K. Remember that in keeping poultry in confinement we must provide food for them that they would find for themselves if they could roam, namely, green stuff, cut bone, grit and shells; also a scratching shed, with litter on the floor, so that the grain can be scattered amongst it and the birds will have to exercise to find their food. Fresh water is also an item not to be overlooked, and, above all, keep your hen house and runs clean, as birds cannot endure dirty, damp quarters over-run with vermin.

If these words encourage any reader to start out on what they will find to be an enjoyable and profitable undertaking, I will feel repaid for the effort.

GEO. L. YOUNG.

Brooklyn, N. Y.

One of the rarest of the Rare Deposits yet found in the bowels of the Earth.

DIAMOND FLINT. Nature's blending of Grit, Lime and Phosphoric Acid, not to be excelled for Digestion of Food in Fowls and the creation of egg shells, adding vigor to the strongest of your flock.

Scientists claim this deposit to have been formed more than 5,000 years ago, and it is recognized by them and the natives, who have been using it for more than 100 years for their Poultry, as one of the most valuable products of the earth yet discovered for any and all kinds of fowls—Second in Hardness to Diamonds Only, hence the name "DIAMOND FLINT," 'tho formed of a hetercgeneous mass of shell-fish and shells from which a milky substance flows when first exposed to the air. Does away with all need of oyster shells. Instead of buying a ton of oyster shells and a ton of ordinary poultry grit, order a ton of DIAMOND FLINT and you have all the properties to be obtained in both the others, and many other beneficial qualities not contained in either, at a great saving of time, labor and money.

Chickens For The Early Shows.

Taken as a whole, it can hardly be said that the quality of the young stock we see at the summer and agricultural shows is up to a standard which might be reached if fanciers set themselves to work with the object of improving these exhibitions. Probably the reasons are not far to seek. In the first place the leading exhibitors of poultry are more concerned about the blue ribbons to be won at the Dairy and Crystal Palace exhibitions, and prefer to keep their best young stock at home instead of running the risk which would be incidental to sending them to the summer shows before they are fully developed and thus mar their chances at the great National exhibitions. Then, again, it may be that the prizes offered at agricultural shows scarcely pay for the trouble of competing; and there is a third reason, too, inasmuch as the promoters of agricultural shows are generally more or less of the stolid old farmer type, and turn a deaf ear to counsel from those who understand the classification of poultry and their management at shows. However these things may be, it seems rather a pity that agricultural shows are not better supported in the way of poultry exhibits, for there is no reason why the difficulties that have been enumerated should not be overcome. It would never do, of course, to send chickens to the summer agricultural shows which are intended to be competitors at the Dairy and the Palace; but there seems no reason why other birds should not be available, for a practical man can tell pretty shrewdly which of his birds are likely to be Palace winners and which are only fit for the summer shows. The other points, prize money, etc., are matters for the local poultry clubs to take up in connection with the agricultural societies of their districts. If there were more energy displayed by the poultry societies which are scattered about all over the kingdom in the direction of extending their influence (to the lessening of the energy which is invariably displayed in quarreling inter se) it would be to the benefit of the societies as well as of the agricultural shows they might support.

Now a few words about preparing chickens for exhibition at summer shows. It will be obvious that the first essential is early hatching, but not too early, as a bird may be hatched on New Year's Day and yet not be as forward as another bird hatched on the first of March. Management and method count for everything. The largest number of summer shows take place in July and August. A bird hatched on the 1st of March is four months old on the 1st of July. If a pullet of one of the prolific breeds, it will almost be ready for laying by that time; by the 1st of August it probably will be laying if it is a Leghorn. Looked at in this light, the question of early hatching seems easy of settlement. The bird hatched on the 1st of January has the keenest part of the winter before it, and will never really develop to the extent that a bird hatched a little later will, when the keenest part of the winter is over, or nearly so. It is not the first three or four weeks of a bird's life that tell in its development; it is the period commencing at the age of about a month, when it has become covered or almost covered with feathers, and is acquiring a capacity of looking after itself; so that a bird hatched on the 1st of January is a month old at the beginning of February, and then is ready either to go forward or to turn back, and the chances are that it will turn back on account of the severity of the average weather in February and March; but the case is different with a bird hatched on the first of March. When he arrives at the age of about a month—the time for going forward or turning back—he has before him the sunshine of April (for April very often is a warm month.) Therefore, our later hatched bird can have what the earlier hatched one cannot have—a straight run from the shell to maturity without any "pull backs," so that it does not follow that the man who hatches his chickens the earliest is the man who will be the most successful at the summer shows.

What are the points required, or what should be the points required at a chicken show? Should the main point not be that of development—the most forward bird—the bird showing greatest promise in regard to frame and build, with markings only of secondary consideration? Of course, the Standard would vary in different breeds, in some more consideration could be given to the color, etc., than in others, as, for instance, in the case of the Buff varieties of poultry in the Standard for which color counts for so much; but in the case of the Dorking, Indian Game, Black Red Game, Langshan, Minorca, or, in fact, almost all breeds, with few exceptions, development—shape and style—these should be the points, for it is practically useless to take any notice of their color since they will moult, or most of them will, before the great national shows, and the color may be quite different then. There is no better example of this to be found than in the case of a Plymouth Rock, which may be perfect in color as a chicken, but may have become quite messy by the time the Dairy show is reached.

Development, then, being the great point to aim at, it becomes necessary that selection should be made from the chickens as they are hatched, and likely birds be attended to with a view to their being entered for the summer shows. They ought to be kept apart and be specially fed, a dietary being arranged for their particular benefit. The sexes should be separated, because they grow so much better when they are apart than they do when they are together. As regards food, this should comprise a fairly liberal allowance of lean meat—fibrine meat—say about 10 per cent in the soft food. The best grain will be oats, as there is more that is frame growing in oats than in any other grain. Medicinal preparations are not required at all except in the case of birds with great reach and length of limb, and then a small quantity of hypophosphites will be useful in order to stregthen the bone formation, the best thing being some capsules of cod liver oil with hypophosphites. The birds ought to have plenty of exercise and should be kept from the hot rays of the sun, which, if color is to count for anything, will rapidly deteriorate the quality of the plumage from an exhibition point of view. On the other hand, too close confinement will keep them back altogether. It seems hardly necessary to enter into other details—the elements of poultry keeping will be sufficiently understood by those who are at all interested in this subject, and it is chiefly with a view to drawing attention to the patronage extended at present to the summer shows that stylish Silver Sebright.—W. M. Freeman, M. P. S., in the Fanciers' Gazette, England.

Cleveland, Ohio.

Editor American Fancier: We are pleased to inform you that we are in receipt of a letter from secretary Charles McClave, of the Ohio State Poultry Association, who says: "We have decided to accept of the proposition made us to hold the State Poultry Association exhibition in conjunction with that to be held in Cleveland, December 4th to 10th inclusive, 1901, by the Cleveland Poultry and Pet Stock Company. I see no reason why this should not be the best opening for the largest show to be held the coming winter between New York and Chicago. With the combined efforts of the two associations, it will certainly be a record." You will no doubt remember that the Cleveland Poultry and Pet Stock Company, was recently incorporated under the laws of the state of Ohio for $5,000. This fact together with the state association meeting with us, will certainly make the Cleveland show, as Mr. McClave says, "a record breaker."

F. R. HUNT, Secretary of
The Cleveland Poultry and Pet Stock Co.
Cleveland, Ohio, June 3d, 1901.

The Bantam Judge.

The judge,
"He lost his job."
He scored the Bantam eighty-four.
Great Scott!
How could he rob
The owner of the ten points more
He knew his bird would surely score.
Two saw bucks (xx) and a crisp good vee (v.)
He'd cost his owner. Don't you see?
And did he kick?
Well, yes!
"That's why"
The judge,
"He lost his job."

This judge,
"He kept his job."
He scored a Bantam ninety-four.
Oh, my!
(Don't weep) just "dry your eye."
This bird,
Had cost his owner many a sore
And anxious day;
He'd often looked him o'er and o'er,
Try as he might, he couldn't score
Him more nor less than eighty-four.
And was he pleased?
Well, yes!
"That's why"
This judge,
"He kept his job."

Dayton, Ohio.

The Hen As a Machine.

WHAT SHE NEEDS IN HER FOOD.

Part I.

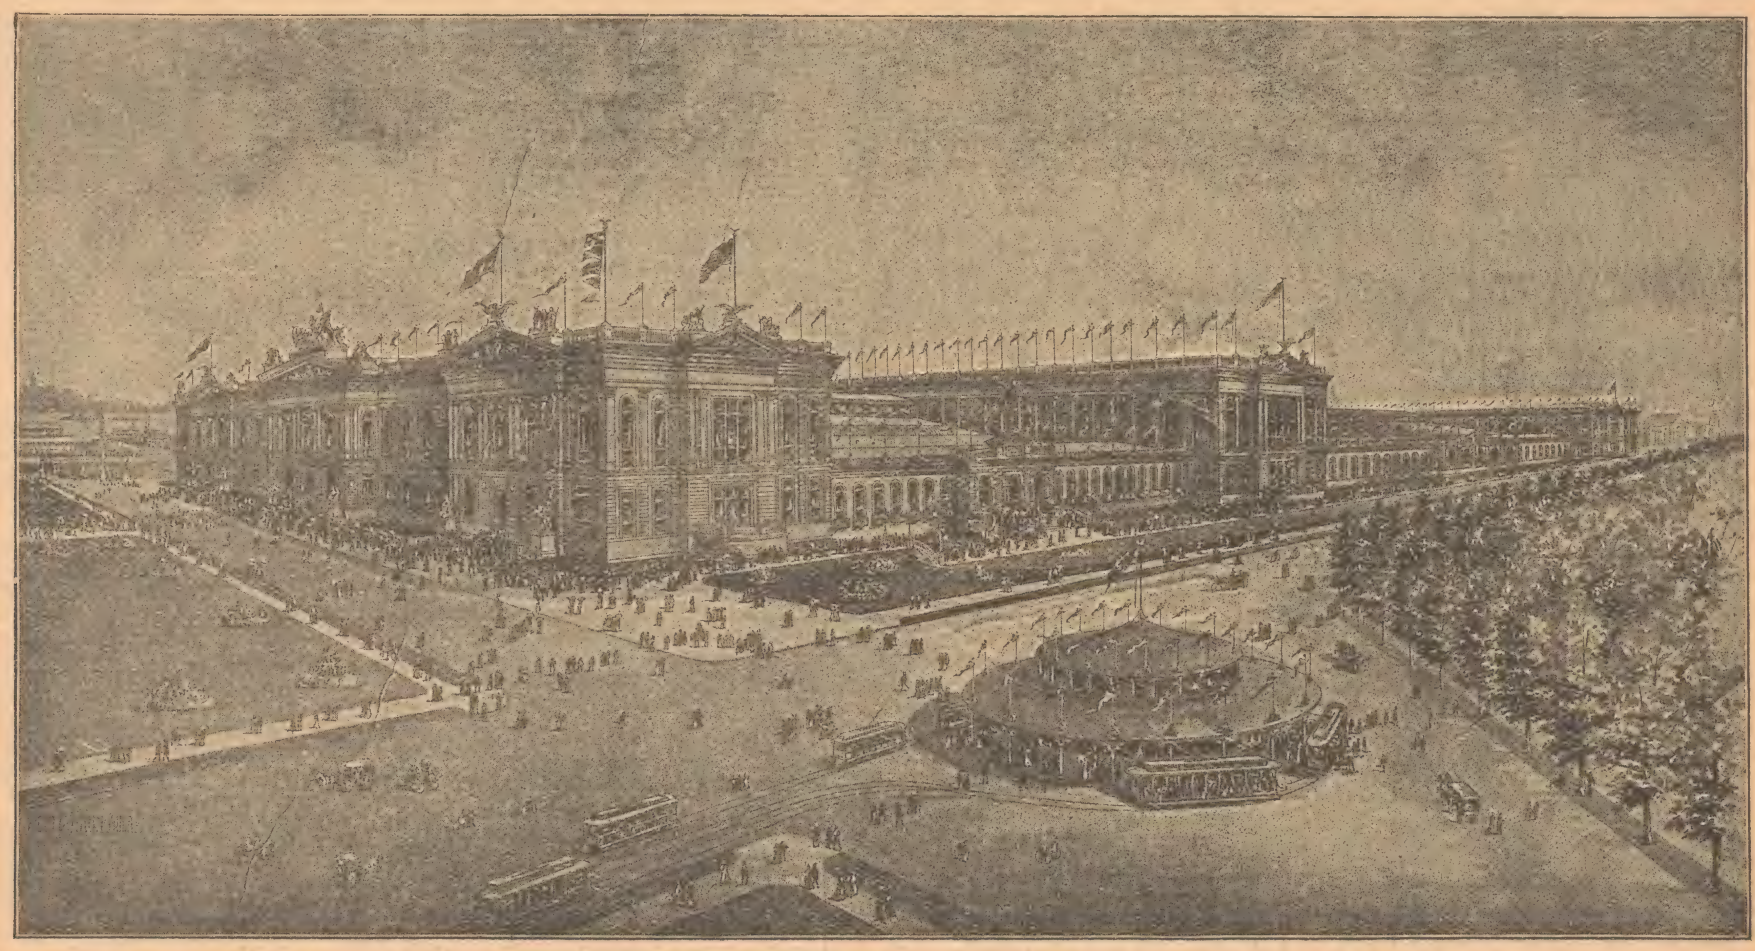
In order to thoroughly understand this subject, let us begin at the bottom, or at least as near the bottom as present knowledge will permit us. First, let us quote from the Rural New Yorker of August 28th, 1897:

"The realm of matter is composed of about 70 primary or chemical elements. By a primary element, we mean an element which cannot be subdivided by any known process of chemistry. Of these 70 elements, about 14 go to make up the vegetable and animal kingdoms. A subtle principle, which we call life, is present in every fruitful seed, fertile egg and embryo animal, which, if given the proper conditions, will gather to itself enough of these 14 elements of matter, and combine them in such a way as to form a complete specimen of its kind, and, taking the male and the female together, to perpetuate its species. In the case of the fertile egg, the first condition to be supplied is heat. Supply the proper degree of heat and the life principle within the egg begins to gather to itself the elements of matter which Nature has placed within the shell of the egg. At the end of about 20 days, we have a chick with sufficient strength to burst its prison walls and come forth to the battle of life. Its next requirement is oxygen. As soon as respiration begins, it must have oxygen to unite with the carbon in its system, and keep up the fire of life begun in weakness. It can get part of the heat necessary to sustain life in this way, but it must flee often to the shelter of its mother's wing for additional warmth. As it increases in size and strength, it depends less and less upon the heat from its mother's body, till, at about six weeks of age, it can "go it alone" if it has proper shelter from storm and cold.

"Its next requirement is food and drink. These must contain the same 14 elements of matter which it found within its shell. Nine of these are needed in very small quantities, and are supposed to be present in sufficient quantity in all ordinary food, viz: Sulphur, chlorine, iron, silicon, potassium, sodium, magnesium, manganese and phosphorus. The remaining five are oxygen, hydrogen, calcium, nitrogen and carbon. Of these, the chick can get a supply of oxygen and hydrogen from fresh pure air and water, so we need not worry about supplying them in the food. We now have the food question narrowed down to the three elements, carbon, nitrogen and calcium. The chick seems to have the power of securing a supply of the latter from crushed oyster shells and bones, so, if we keep a supply of these constantly in reach, we need not worry about supplying it in the food. We now have the food supply narrowed down to the two elements, nitrogen and carbon. If we supply these two elements in the food in digestible form, and in the right proportions, the vital functions can go on to best advantage, and the development of the chick will be normal and healthy.

"If we furnish an insufficient supply of any of the elements needed, development will be checked. If we give an excess of carbon in the food, the chick has the power of storing up some of it for a future time of need, in the form of surplus fat; but this is not a normal condition, and the extra fat is in the way. I know no natural provision for storing up surplus nitrogen, but believe it quickly clogs up the system, poisons the blood, and is responsible for many of the ills of life, whether of chick or child. As soon as the pullet is sufficiently developed, part of the matter in the food is used to produce an egg in the effort of life to perpetuate its species. If she have comfortable shelter and a well-balanced ration of food, with pure air and water, and crushed bones and oyster shells ad libitum she will lay all the eggs of which her individuality is capable. If her ration is not well balanced, or if any of the other requirements are wanting, she cannot do her best.

"To illustrate: The Deacon has plenty of maple trees, and a good evaporating pan. His man, Mike, knows how to use it, and can make 50 pounds of sugar a day with it. If the Deacon set Mike to making sugar in the morning, what are his chief requirements? Sap to keep the pan filled and wood to keep the fire burning. If the Deacon furnishes him with only half enough wood or half enough sap to make 50 pounds of sugar, Mike can go out and gather more wood or more sap as the case may be, just so the hen at liberty goes out and secures what we fail to furnish her in her food. Now, let the Deacon lock Mike in the sugar house with the evaporating pan, and we have a good illustration of a hen shut up in a pen, or in winter when the earth is covered with ice and snow. Unless the Deacon passes in the sap, wood, and other requirements, in the right quantity and proper proportions, Mike cannot pass out his 50 pounds of sugar at night. Remember that the sugar house is small, and has storage room for only enough wood and sap to last a few hours at a time. If the Deacon keeps on bringing wood when Mike needs sap, his sugar is likely to scorch. He may pile up a little of the extra wood, but it will only be in his way, like the surplus fat on the hen's body. If the Deacon keeps on bringing sap when Mike needs wood, the pan will soon run over and quench his fire completely. If, however, the Deacon keeps on bringing the wood and the sap in just the right proportions and in abundance, Mike can make his 50 pounds of sugar a day just as easily as if the door were not locked. If corn contains an excess of carbon for a hen's regular needs, then it is poor policy to give a hen a full meal of corn at any time, as some of her functions must wait for nitrogen, while the corn is being disposed of. If wheat bran or lean meat contains an excess of nitrogen for her regular needs, then it is poor policy to give a hen a full meal of wheat bran or of lean meat, as the case may be, at any time, for similar reasons."

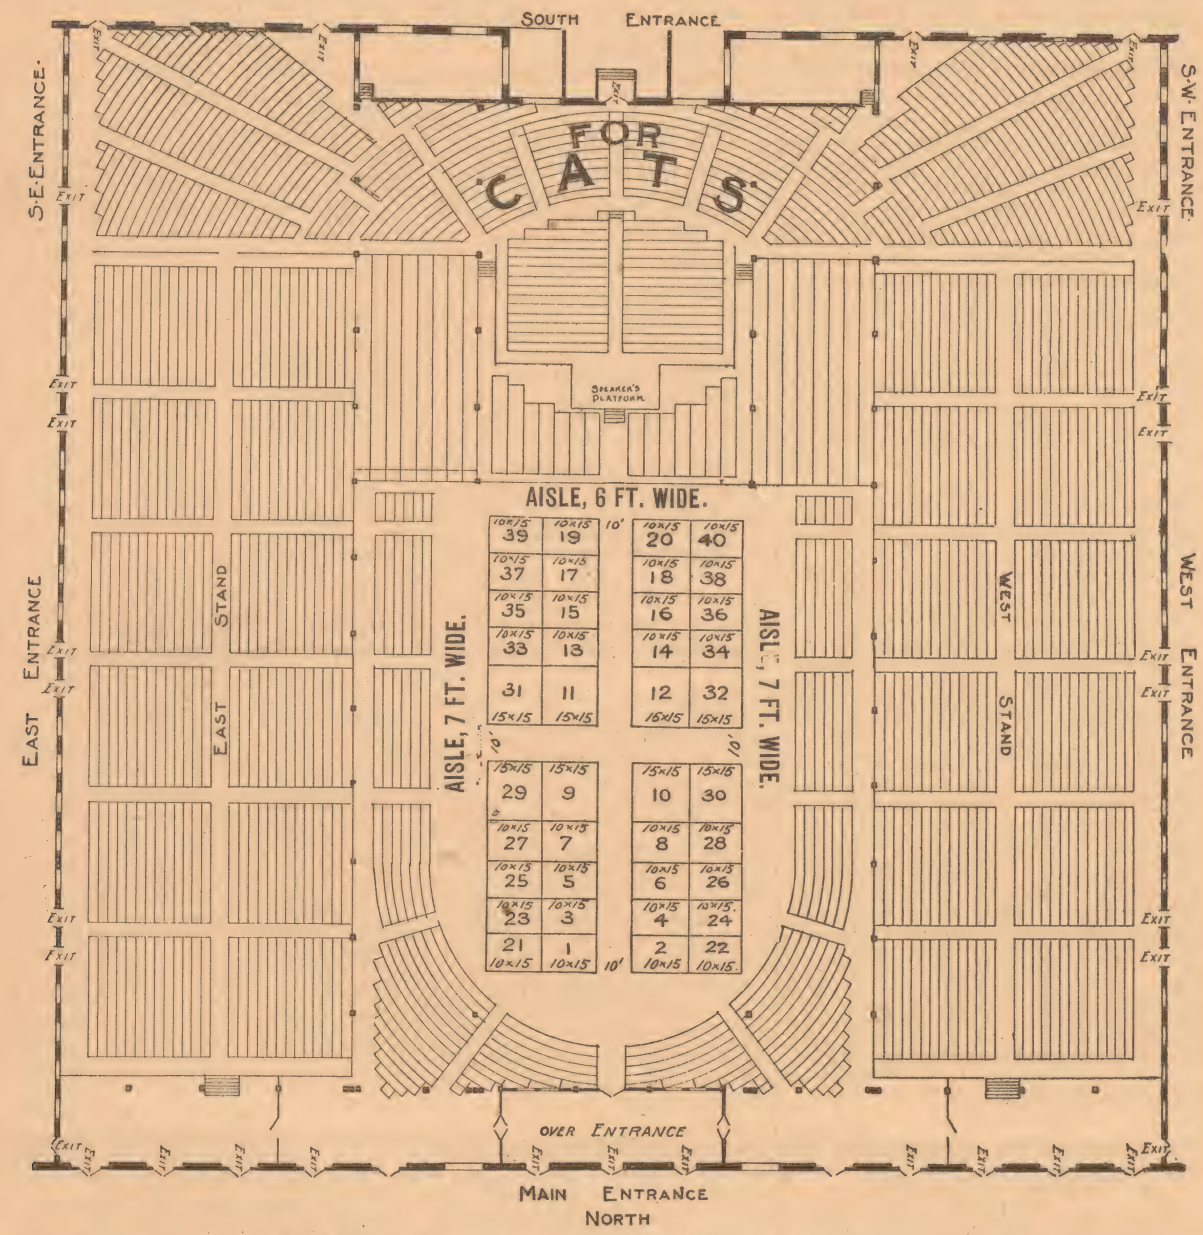


The above was written more than three years ago. After three years of additional study and experience, I can find but little occasion to criticise it. I will, however, draw my pencil through the sentence where I said, "Nine of these elements are needed in very small amounts, and are supposed to be present in all ordinary food in sufficient quantity etc." While this is the popular belief, even among the best informed scientific men, and may be true in feeding a cow or a horse which consumes food for three or four years in order to build up the framework or skeleton of its body, my hens tell me that it is not true in their case, where this framework must be built up from the food consumed in five or six months. Some of these elements, besides the calcium, are undoubtedly secured from the crushed bones, particularly the sulphur and phosphorus. There are others, however, about which I am not so sure. Besides the 14 elements which the chemist can name, there may be others, as yet unknown even to the modern chemist.

THE REQUIREMENTS FOR EGG PRODUCTION.

Part II.

An egg is a complete food and must contain everything necessary to form a complete chick. Mike would be as completely "stuck" if the Deacon failed to furnish him with a match to start his fire as he would be without any sap. Where shall we look for these little things? The hen at liberty looks to every insect, bug or worm which she can find. Aside from an egg, milk is the principal example which we find in nature of a complete food. This is undoubtedly the reason why it pays so well to furnish skim-milk or buttermilk for a hen to drink, instead of water, when it can be secured. I would also like to emphasize the sentence where I said, "if she have comfortable shelter and a well-balanced ration." Very much depends upon the "comfortable shelter" as well as upon the other requirements named. As regularly as the seasons come and go the great mass of hens in this climate cease egg production when winter appears, only to resume when spring returns, in spite of balanced rations and everything else. Why is this? I believe it is for want of comfortable shelter in a large degree. A hen's system has its limitations. There seems to be a point somewhere between "a perch among the apple blossoms of spring time, fanned by the summer breezes" and "clinging to the bare limb in midwinter, with the wintry blast howling about her head," where nature draws the line between egg production and sterility. This line undoubtedly varies to some extent between different breeds, and also between different individuals of the same breed, but it is there just the same, and must be taken into account by the successful poultryman. The stereotyped advice usually given is to "keep her on the go." "Make her scratch" in order to keep her warm and comfortable. While this is sometimes effective in keeping her warm and comfortable during the hours of daylight, it is wasteful of feed and energy if carried too far, and is often counteracted by compelling her to shiver on her perch in a cold place during the hours of darkness.



A better way is to warm her quarters by day and by night by conserving the heat of the sun's rays, and the heat of the hens' own bodies. This can now be easily accomplished by a proper construction of the house and roosting

The Philadelphia Commercial Museums, 33d and Spruce Streets, where the Keystone Poultry, Pigeon and Pet Stock Association will hold their show, Dec. 28-Jan. 2, '02

quarters, and by the use of the ventilating drum. This is constructed on the principle that different metals have a differing power of conducting heat and enables us to draw off the impure air exhaled by the breath, without allowing the heat to escape. By its use a hen can warm her own roosting quarters in a cold room as successfully as a person can warm his own bed in a cold room. I have recently been experimenting a little with them. One was recently put in place in one of my henneries, which are built entirely above ground, of single-board one-inch siding, lined with paper, on an open foundation of loose stones. This morning (March 7th) the thermometer stood at zero on the outside, while the hens inside were in a temperature of 42 degrees.

We are apt to pass the little things by in preparing a balanced ration. Only a little silicon, for instance, is needed in the manufacture of an egg. Surely, you say, she can pick up a grain of sand and

Floor Plan of the Keystone Poultry, Pigeon and Pet Stock Association Coming Show.

vidual life is capable." As time goes on there are certain instinctive causes which step in and arrest the flow of the life current towards egg production. The first one of these is the propensity to become broody. This is another instinctive effort of life to perpetuate its species. In a state of nature this effort is put forth as soon as her nest is filled with fertile eggs. Under the conditions by which civilized man has surrounded her, this propensity has been largely overcome by feeding, breeding and selection until, in some breeds, it is almost entirely eradicated. This instinctive effort of life to perpetuate its species is only put forth under home-like surroundings. Remove her to new and strange surroundings and the current of life is at once returned to the channel of egg production. As the season for renewing her covering of feathers approaches the current of life along this channel is again arrested. A naked hen would make a poor showing, hovering a

get that. But Nature has not given to animal life the power to digest and assimilate crude and inorganic matter, whether it be nitrogen, iron or silicon. The power to take up this crude inorganic matter from the soil and combine it into organic forms is only given to vegetable life. Thus it will be seen that the vegetable kingdom acts as a sort of wet nurse for the animal kingdom We must take this fact into account when we look about for a food supply. Again, some forms of animal life have been specially endowed with the power to convert the coarse forms of vegetable growth into flesh and blood (and milk), while others are specially endowed with power to reconvert this same matter into higher forms of animal life. The study of the subject becomes more and more interesting as we advance along the pathway of scientific and exact knowledge.

We left the pullet where we said that "if certain conditions are provided she will lay all the eggs of which her individual clutch of eggs or a brood of chicks. So Nature has again stepped in and provided that the current of life shall be diverted from egg production and turned to feather production. When this has been accomplished the flow of life's current goes back to the production of eggs again. Right here, however, our rigorous winters are likely to step in, and in the majority of cases, the point between the apple blossoms of summer and the bare limb and cold blasts of winter, marking the limit of her system, is passed, compelling her to wait until the wintry blasts have passed, or until man provides the summer conditions of comfort in some other way before her task of egg production is resumed.—O. W. Mapes in the Rural New Yorker.

The Goose Trade In Germany.

Frank H. Mason, Consul-General at Berlin, writes: The domestic goose holds about the same honored place in the nutritive economy of Germany that the more delicately flavored and patrician turkey does in that of the United States. It is the standard luxury of the German people, and during nine months of the year forms the principal feature of the table at festive as well as every-day entertainments.

Although every German village has its flock of geese, and notwithstanding the great numbers that are bred and fattened at farms along the banks of rivers, ponds and small lakes, the home-grown supply falls far short of the constant demand, leaving a large annual deficit to be filled by importations, which come mainly from Russia. At the height of the season for this traffic the receipts of Russian geese at the Rummelsburg station, in the south-eastern quarter of Berlin, average about 15,000 daily. A special goose train of from fifteen cars on ordinary days to thirty-five or forty on Mondays brings the birds from the Russian frontier. The cars are specially built and rigged for this service, and carry each about 1,200 geese.

Immediately after arrival, the whole train load is inspected by a corps of sanitary officials. The fat ones are then distributed among the dealers and market men, while the others—and these include the vast majority—are sent to be fattened at farms and feeding establishments in the outlying provinces.

The inspection is exceedingly rigid. If a single goose dies en route or is found sick with any disease that can be communicated to others, the whole carload is placed in quarantine for a period of eight days. Should another goose die during this period, the whole lot is kept in quarantine eight days longer at a cost of about 2,000 marks (£95), whereby the loss of the owner becomes so enormous that he is driven to the most extreme care and precaution in all future operations of the same kind. This is the real object of the system—to make the penalty of introducing diseased birds so severe as to render such practice ruinous to the perpetrators.

In certain cases, where the evidence of neglect or infectious disease is not conclusive, the lot is taken to the city abattoir and killed under supervision of the sanitary police, after which such as are found to be free from disease are released for sale at a special auction held in the central market hall, whence the trade name "auction geese," which applies to those which have been slaughtered under police supervision. Those which show no trace of disease, but have been unavoidably injured in transit and are otherwise in good condition, are called "Bracken," and are sold to certain dealers who retail them for reduced prices at a special market beside the great market place, where the poorest and most frugal Berliner can find something adapted to his purse.

The aggregate wholesale traffic in geese at Berlin amounts annually to nearly £400,000. To the ordinary observer, all geese are very much alike; but the expert dealers here divide the Russian birds into twenty-one different breeds and categories, which now command in the Berlin market, according to species, age, size and conditions, wholesale prices varying from 43 to 60 cents each, though the prices advance with those of other poultry as the season lengthens from autumn into winter, the great climax of the trade being just before and during the Christmas holidays, when goose in every form, from the plain "Gænsebraten" of the laboring classes to the pate de fois of the epicure, dominates the tables of the festive season.

Handling Brooder Chicks.

The mortality among brooder chicks is due to the influences of heredity and the conditions of environment during incubation, mechanical causes, imperfect sanitation and imperfect feeding. Special emphasis needs to be placed upon the feeding. Experiments with brooder chicks by the Rhode Island Experiment Station showed at the end of 30 days a loss by death of 63.7 per cent. in a lot fed on egg, liver and green stuff, chiefly from digestive troubles resulting in diarrhœa.

Another lot fed on grains alone showed a mortality of 32 7 per cent. mainly from digestive troubles. strongly indicated by abnormal enlargement of the gall bladder. A lot fed on grain and green stuff suffered a mortality of 9.5 per cent., while a lot fed a complete balanced ration of egg, meat, grain and green stuff had a death list of only 3.5 per cent. By using a proper amount of animal food with the grain food and supplying the necessary green food a large proportion of the untimely deaths may evidently be prevented, provided that the other factors are properly regulated.

The extreme variations of the Northeastern weather make it desirable that there be provided four degrees of protection or comfort for brooder chicks: (1) An inviting, properly ventilated hover, kept continuously, uniformly and sufficiently warm, to which the chicks may at any time resort as they would to the mother hen and warm up quickly. (2) A ventilated and lighted brooder or apartment warm enough to protect the chicks from chilling on raw, windy days and sufficiently attractive to tempt them from the hover as much as possible. (3) A run protected from winds and storms by being inclosed within a brooder house, or, if outside, covered with hotbed sash. (4) An outside yard available in pleasant weather, into which even the youngest chicks should be tempted by litter, grain, green food and scraps whenever the sun shines or the winds are not too severe.

In some way the chicks must be provided with a sure refuge where they will be comfortable whatever the weather. Then they should by every means possible be induced to keep out in the fresh air and to take exercise as they would with the mother hen in pleasant spring weather.—American Agriculturist.

Score Cards.

"We called attention to the danger of this private scoring business years ago, and believe that to day it is carried to a point where the business of honest breeders and fanciers is threatened because they have refused to be parties to such a fictitious valuation of their stock. A prominent breeder informed us that he will be compelled to hire some professional judge to score his birds in order to compete with competitors that advertise 95 points at market prices. How high must such birds score to reach their real value? Will some devoted advocate of this system of selling stock kindly explain."—American Fancier.

The private scoring of birds has done more harm to the score card than all of the criticism that has ever been made against it by the comparison advocates. The man who is afraid to go into the show room and meet honest competition is the one who has his birds scored at home. We have judged poultry for many years, but up to this time have never done any private scoring, and if the Lord is good to us we never will. But there are numerous judges who do private scoring who ought to know better.

In many instances the judging of poultry has fallen into bad hands in the last few years—a lot of cheap sports who, instead of placing awards in poultry shows should be out somewhere hauling manure with a wheelbarrow. These fellows will judge (?) for most any price that is offered. We have in mind a man who, not long ago, judged a big state fair for the munificent sum of $10 and paid his own expenses. And the same man, in another instance, judged a show for his expenses. so as to be able to make a trip of a few miles on a boat. Is it not a deplorable thing that decent judges have such competition? A man who does such work is not the one who is going to always give the best bird the prize; being a cheap man himself, he does not realize a good bird when he sees it. There are too many of this sort of cattle judging shows, and it is the cause of much of the criticism of the score card.

A score card in the hands of a competent judge is the best way to place awards, but in the hands of some men it is very harmful. There was once a judge who thought so much of his opinions that he bought the winning bird and exhibited it at another show, only to have it disqualified for being faked. We understand that this judge now claims that he found it to be faked and called the other judge's attention to it himself. We would like to have this question answered: If a judge could find a bird faked two weeks after he bought it, and when the same bird had passed his hands as a judge, what redress did the parties have who were beaten the first time?

There are cheap judges, cheap poultry papers, cheap breeders and cheap men of all kinds; but the cheap poultry judge is one of the meanest things that live on God's footstool, because he leads some honest fellow into error and in many cases is the means of having a good man designated as a "fraud."—Pacific Poultryman.

The Hen and The Saloon.

"The industrious hen has become an important factor in the saloon business of to day," said an observant man, "and you would be surprised at the startling increase in the use of eggs in my business. Egg drinks are now at the very zenith of their popularity, and the man whose scruples would not allow him to take a drink under any other circumstances will frequently drop into a saloon and ask for a drink of some sort with an egg in it. As a result there has been an enormous increase in the number of eggs used by whiskey men. During the last year in my own business the number of eggs used was three times greater than ever before, and from information gathered from men who drink at my place and other places I have concluded that the same thing is true generally.

"I read in a poultry journal sometime ago that the poultry industry had spurted beyond the beef industry and other industries in importance from a financial view-point. The egg business, of course, represents the larger per cent. of what is called the poultry industry, and I figured that out of the millions of eggs placed on the market annually by the hustling hen at least one-third of them are now used in making mixed drinks. Up to a few years ago the eggnog was about the only drink in which an egg was used. Occasionally a man would drink a raw egg with sherry poured over it, or a 'Tom and Jerry' in the winter time, but the eggnog was really the standard egg drink. But all this has changed. Eggnog is now a Christmas drink altogether, but we rarely hear of it at any other time in the winter. The demand for 'Tom and Jerry' is light. But for other drinks, including sherry and egg plain, the demand is almost startling.

"There are the various fizzes, the golden fizz, the silver fizz, milk punches and other kinds, and sherry flips and a long list of drinks where eggs enter into the composition, and these are now the most popular drinks. Mind you, I am speaking of the saloon consumption of eggs in drinks that carry with them a quantity of stuff that intoxicates. If we include the eggs that are used at the various soda fountains in phosphates, ice cream and things of that sort I will hazard the guess that less than one-third of the eggs shoved on the American market by the American hen get to the American table. There is, of course, a reason for this change. Eggs are healthy, and, so far as the saloon feature is concerned, they stay to some extent the deleterious effects of the alcohol, and frequently with a steady drinker they take the place of the food that a man should get at the table."—New Orleans Times-Democrat.

BREEDERS, EXHIBITORS AND SHIPPERS OF

Line Bred (Since 1892) **Exhibition Stock. Line Bred** (Since 1888) **Laying Stock.**

WHITE LEGHORNS, WHITE ROCKS, BLACK MINORCAS,
BARRED ROCKS, WHITE WYANDOTTES, LIGHT BRAHMAS.

EXHIBITION.

$3.00 for 12 Eggs.
$5.00 for 24 Eggs.
$15.00 per 100 Eggs.

The above are from my best matings. I mate no pens to produce prize Exhibition Cockerels and Pullets from same pens.
Elegant descriptive catalogue free.

The Kind to Exhibit.

LAYERS.

$1.00 for 12 Eggs,
$8.00 per 100 Eggs.
$70.00 per 1,000 Eggs.

The above stock bred for years for egg production. Birds true to shape, color, markings, and of good size. Mated with the laying blood males, will surely produce.

The Kind to Lay Eggs.

MARKET.

$3.00 for 50 Eggs.
$5.00 per 100 Eggs.
$50.00 per 1,000 Eggs.

Above stock bred more especially for market, etc. Females off in size, shape, legs, comb, eye, tail, etc., mated with extra large males will produce right for broilers, etc.

The Kind to Market.

ELM POULTRY YARDS, - - HARTFORD, CT.

Mating and Breeding B. B. R. Game Bantams.

To breed show birds of high quality is an art that can only be learned by experience. A few general points can be told, and when followed success may be the result, but the production of high-class specimens is the result of years of observation, study and patience. If I had been asked to write this article ten or twelve years ago I could have undoubtedly furnished a very valuable article and could have told you all about it, as at that time I thought I knew it all, but after years of practical experience I have come to the conclusion that I do not know one-half as much now about the business as I did then, with all of my experience. But in order to be sociable I will tell what little I do know and will give a few points on color and breeding. It has been claimed for the last few years that the best results in color breeding come from Wheaton females mated to an exhibition Black Red male. From experience I find that the best results from Wheatons come in the second cross; that is, mate a good colored male bird to a Wheaton female, and the next year cross this same male bird to the pullets from this first mating. The cockerels from the first mating—in fact, any old mating—come regular black red in color, and as far as the Wheatons are concerned, you only get about one out of a hundred, and if you do get one you are lucky. For the benefit of those who have not had the experience in breeding Wheaton blood, I will try and explain it. Wheaton females are pure bred, but are very light colored sports from the Black Reds and are used for breeding the bright, crimson colored cockerels that have the lemon or light orange colored hackle and saddle feathers, such as the Standards call for. Now, in breeding the Wheaton blood, you never get a Wheaton male bird, as they always come regulation black red, with the lemon hackle and saddle, as I said before. It is only in the females that you get your Wheatons, and they are very valuable for cockerels on the second cross. Wheatons are the color of wheat in the kernal, red face, red ear lobes and wattles, horn colored beak, light golden hackle (here is where you get that beautiful color in the hackle of your male birds), fawn or cream colored breast, light buff thighs and upper part of body, back and wings pale cinnamon or wheat color (from this they get their name.) Primaries, black; secondaries, outer web, Wheaton, inner web black; tail black, upper feathers produced with Wheaton color, legs and feet willow color. In breeding Wheatons, or any other colored female for that matter, it is essential that your male bird should be of the very best color. Now, as to breeding for females: Use a male of same color as for breeding cockerels, provided you have good sound colored females with a good, solid colored wing without the slightest ruddy cast. This mating will produce the bright top colored females. If possible, it would be best to get a strain of birds noted for breeding both males and females and mate them accordingly. If once you can establish such blood lines of your own, you can hope for males and females of the highest order, but till then look only for a small per cent of exhibition birds. From four to six females are enough for one male. It is all right to inbreed good, healthy birds, but do not make a practice to breed brother and sister together. Son with mother, or father to daughter, cousins in line will go all right, but look out that you don't get brothers and sisters mixed up, or you will be sadly disappointed. April, May and June are the best months to hatch Game Bantams. Never use an overgrown, poor-shaped female Bantam to produce good-shaped stock, nor an off-colored male for good color. Have both as near the Standard as possible.—R. R. Voris, Peoria, Ill., in Fanciers' Gazette.

THE PIGEON STANDARD just issued by C. E. Twombly, editor of the Pigeon News, is a book that fills a "long felt want." It is well gotten up, contains a number of good illustrations, and is indispensable to every fancier of pigeons. Price, 50 cents. Orders filled through the office of the American Fancier.

The Judging of Eggs.

The time of our agricultural shows will soon be upon us and a few words may not be out of place with regard to the exhibiting and judging of eggs. And first of all, I may say that very often the latter is a perfect fiasco. The judging is, as a rule, deputed to the butterman or butterwoman, and often either or both of these are in a quandary as to what they should select as winners. The writer of this article has within his remembrance, dating back within the past two years, an application made to him on the morning of the show by the appointed judges for any literature he might be able to lend them which touched upon the exhibition of eggs, as they were going to judge eggs at such and such an agricultural show. As professional buttermakers, they had been asked to adjudicate upon the eggs as well, and being farmers they did not care to display their want of knowledge by saying they knew nothing whatever about judging eggs.

Some years ago, too many now, alas! for the writer to look back upon too often, he lost a silver cup in a curious way. In a very strong competition he exhibited his dozen eggs for a £3 3s. cup. Mr. Hutton was the appointed judge, but being much pressed for time, owing to the unexpected number of poultry and pigeon entries in his section, he asked another judge, the late Mr. Dixon, who had finished his work, to adjudicate upon the eggs, which he accordingly did. The result was second prize to the writer. Whilst standing by the table of eggs brooding somewhat over his disappointment, up came Mr. Hutton with a gentleman. He cast his eyes quickly over the winner. "Ah!" said he, "I should have put first in second place and second for the cup."

Now, if judges such as these can differ as to which is the best plate of eggs, how are farmers and others ignorant of what exhibition points are to adjudicate satisfactorily thereon? It may be said that eggs are not "fancy" things in the sense that poultry are. I beg entirely to differ. They are, as much so as the poultry or pigeons, on their own particular points. If they are not, then the schedule should offer prizes for the largest or the heaviest eggs, and in the latter case no judge would be required. The secretary could put the eggs into the scale and there would be no judging; the balance itself would decide. But no one understands egg exhibiting in this light. The exhibitor has certain points in his mind's eye and he does his best upon these points to reach the maximum. Therefore a competent judge is necessary.

It may not be amiss here to state that, generally speaking, these points are five in number, which may be put down as follows: Size, freshness, evenness, color and shape. Undoubtedly, all other things being consistent, size along with freshness should carry the day in a competition. The market demands a big egg. It is more readily sold and commands a higher price than a small one in important markets; it furnishes more sustenance for man, whether cooked or used in cookery. Altogether size comes in as a very important factor, but with the size we must have freshness. Fresh food is a *sine qua non.* Moreover, apart from its quality as an edible, its usefulness is prolonged by the fact of its absolute freshness, so that I should feel inclined to select these two points before all others.

The mere color of an egg is a secondary consideration, as well as its shape. It has been maintained over and over again that color is due to the breed and perhaps the kind of food administered rather than to any extra flavor or quality in the contents of the egg itself. Personally I was never able to tell by taste, when blindfolded, which was a brown or mahogany colored egg and which was a white. But sentiment is something, and, given two dozen eggs to select from, the one deeply colored and the other plain, the housewife would, if size and freshness were equal, choose the rich tinted ones before the others. Therefore color deserves to come in as a secondary point only.

In like manner shape may take a secondary place. What possible end can it serve the consumer whether his egg tend to the spherical, oval or cylindrical shape? The baker, in making his pastry, or the cook cracks the egg on the edge of the bowl without a thought of what the shape may be. And yet there is a consideration. The engaging hostess and the hotel proprietor like to set before their guests a thing of beauty, not all end, just peeping out of the top of an egg cup, the rest buried in oblivion by reason of the shape of the egg, which has allowed it to appear something like a dwarf preacher addressing his flock out of a deep pulpit. The more an egg tends to the spherical the better will it look in an egg cup, and convey, somehow, the idea that there is more yolk than white. Of course this is really an absurd notion, but fancy is a great thing nowadays, and, so long as people will take fancies, these fancies must have a hearing; so that, all things considered, we may give shape, as I said before, a secondary place.

Evenness of size amongst the eggs should find a place, but only a tertiary one. It has not the same claim upon us that the other four have. It is merely a matter of the moment, as we look at the eggs as a whole, and has no consideration whatever, either for market or table purposes. Eggs are brought to table in cups. The point of evenness is, therefore, lost, and I venture to say has never taken a place in sale or purchase. It is a possible point, when all other points are running level. It constitutes just one more possible thing that can be taken into consideration in making an award.

Summing up, then, my remarks, I place the respective points relatively as follows: Freshness 3, size 3, color 2, shape 2, evenness 1. This adds up to an awkward number—11; but if this should be considered unsatisfactory, give an extra point to freshness, as the smallest fresh egg on exhibition is preferable to the largest on its road to decay; and have your standard fixed at the same number of points as the set you are judging contains eggs. This, then, would be very easily remembered by those who are not accustomed to carry "standards" in their heads.

A word may be added to the exhibitor. Have clean nests, so that you are not compelled to have to wash your eggs and thus take off in some measure what you can never put on again, viz., the peculiar lime like look of a very fresh egg. Gather the eggs as soon as they are laid. Do not handle them, as in warm weather every time you touch them your fingers impart to them a more or less greasy look. Take as much care of them as if they were plums for exhibition covered with a rich bloom, removable by every slight finger touch. Keep the eggs away from the light, warmth and air as much as you possibly can, as these are the factors which not only tend to, but eventually bring about, putrefaction; and when once the egg has begun to be affected it will take on, in spite of all you can do, a stale appearance. With all this necessary care, to make our eggs as presentable as possible, and give them the best chance of winning, the exhibitors' chagrin may be imagined when, arriving at the show, they find that the adjudication has been committed into the hands of those who have often little conception as to the lines upon which they ought to operate.—Rev. J. N. Williams, B. A., in Poultry, England.

—The Cosmopolitan for June is even more than usually strong in fiction. Ian MacLaren tells more adventures of that incorrigible youth, Sparrow. Richard Le Galliene revives with charming freshness and simplicity the love story of "Aucassin and Nicolete." H. G. Wells concludes "The First Men in the Moon" with Cavor's sudden death at the hands of the Grand Lunar. Tudor Jenks contributes a clever little satire on justice. Egerton Castle's powerful novel, "The Secret Orchard," continues, and O'Neill Lathom writes a half humorous, half sad fairy story, "Prince Weary-Heart."

PIGEONS.

Lustre in Archangel Pigeons

It is with some little diffidence that I take up my pen to enlarge upon this grand property. I feel that to describe its subtle qualities in fitting language is beyond my power; that no words can adequately convey to the mind's eye what exquisite beauties are unfolded and displayed by this most remarkable attribute of the Archangel pigeon. Other varieties there are bearing upon their plumage varying degrees of brilliancy and sheen, but all pale into comparative insignificance when placed side by side with the subject of these notes. Here we find the marvellous effects of lustre in its most perfect form, enriching, dazzling, resplendent. I know of no form of enjoyment more appreciated by the lover of the Archangel than that which is afforded by watching his pets on a bright summer morning as they disport themselves in the genial sunshine—reflecting, tinsel-like, upon their gorgeous plumage all the glories of its prismatic rays and changing color with kaleidoscopic effect at every glint of light. This is really one of the greatest charms of the variety. It is a source of never ending delight to the fancier. On account of the extreme beauty of their lustre, I have always thought it a pity to cultivate good Archangels in dark, covered-in places, where so many of their best points are kept from sight and the pleasure derived from admiring these consequently lost.

It is affirmed by some breeders that constant exposure to the sunlight tends to weaken the body color, especially the bronzing, but my own experience does not bear out this belief, my birds having always had the use of an open aviary without any ill effects being apparent. Naturally, where wealth of lustre is present, the brightest light will display it to the best advantage, but the power of the sun's rays, while intensifying the brilliancy of sheen, will not preserve its purity in the matter of tint, its effect being rather to intermingle the different shades indiscriminately than to emphasize the distinct colors which, we shall presently see, are required in the lustre of a standard bird. A clear, if subdued, top or side light will best assist in bringing about the desired end, but it is essential that there should be a dull background or the glare will destroy its good effects. The waning twilight of a summer's evening, when the fiercest strength of the sun is gone and the atmosphere is soft and clear, is just the time, to my mind, when the full beauty of a rich lustre can be best appreciated. I should not care to confess to the number of hours I have spent in admiration of my Archangels under such conditions. How grand they look in their mail of burnished metal, and with what purity and vividness is each pervading tint brought out and displayed! One frequently hears complaints of the light provided at many shows for the judging of the Archangel classes, and it must be admitted that in very many instances there is ample cause for the "growl." Anything in the shape of dark, dingy, or gloomy surroundings is absolutely fatal to the task—if it is to be satisfactorily conducted; yet how often it is that we find birds staged in double tier or otherwise so completely obscured from view as to require the aid of artificial illumination to render inspection possible. Even then results are seldom to be relied upon, for many an inferior specimen has taken "gaslight honors" that in the light of day would have been unnoticed, and many a superb pigeon has been shorn of its laurels solely owing to the misleading influences of bad or unnatural lighting.

All this is due chiefly to the peculiar nature of lustre which, prism-like, reflects varying colors at every change of light. A minute examination of a single feather under a powerful glass will best serve to demonstrate the wonderful character of this quality and will reveal its beauties with striking effect. It may be reasonable by way of curiosity to inquire to what such profusion of sheen as is found in the Archangel pigeon may be due, for it would appear tolerably evident that, whether we are able to explain it or not, there is, nevertheless, some mysterious force at work to account for its presence. I make no pretensions to any knowledge as to what this may be, but there is one peculiar feature in the bird's plumage which it has often struck me may, in some way or another, be associated with its excessive lustre—I allude to the curious growth of the feathers on certain parts of the body, notably on the sides, under the wing, and likewise on the rump. On these parts, and occasionally elsewhere, we shall find that the shaft and the fibre adhering thereto is dried up and encased in a powdery-like covering. This, from its sapless condition, would indicate an entire want of nourishment in the major portion of the feather, and it would appear therefrom that such moisture as is necessary for the development of a normal feather had in this instance concentrated itself in the tip alone, its mission being to strengthen the lustre there. I offer the suggestion for what it is worth; if there be nothing in it, then some other reason must be found in explanation of such an unusual state of affairs. For my own part, I incline to the opinion expressed by Mr. Vander Snickt, and quoted earlier in these articles—that to the dark hue of the flesh, as indicating the presence of a powerful coloring agent, must be attributed the lustre peculiar to the Archangel. That brilliancy of sheen is also largely dependent upon the state of a bird's health may be proved by the fact that in the winter time, when conditions are favorable, it will be seen at its best, while during the summer months, when the strain of breeding tells upon the system and its tone is consequently lowered, a marked diminution in brightness will be observed. This applies to lustre of any density, whether thick or thin, for it should be remembered that it exists in varying degrees, shades and tints. But of whatever kind of "polish" an Archangel may be possessed in the matter of color, it is essential that depth and profusion must be the cnaracterising features of the property. It is not sufficient for a bird to be merely lustrous; in these days of keen competition it must be very lustrous. Every Archangel, if it be one at all, carries a certain amount of sheen, so that it will not do to point to the mere possession of it as evidence of quality. I would particularly press this point home to the novice; let him get it well back in his mind and not be content to put up with specimens of only average lustre. There are plenty such about. In a really high class pigeon the lustre is thick, solid and profuse. It extends well down the feather and is not confined to the mere tip, as is most frequently the case. Upon the back and shoulders especially is the gloss very abundant, so that these parts will present a sound, unbroken appearance. A very large percentage of birds seen in the show pen, even nowadays, are woefully short of lustre on the back. Through its absence in sufficient density here, a distinct chequering is visible—arising from the prominence given to the dull portion of the feathers. Looked at aslant, this may not be quite so noticeable, but one has only to reverse the position of the bird so that the head is pointing away and the back viewed from an opposite direction instantly to detect the blemish.

The splendor of a really good top lustre is a sight to behold. Each feather, from its wealth of sheen, will completely overlap its neighbor and hide from view any part ungarnished by the gem-like adornment—preserving from end to end one mass of solid brilliancy. Such a display of quality, however, can very well exist in a bird that is not of necessity a show specimen, for the reason that by the requirements of the approved standard different shades of lustre are wanted to adorn the various portions of the plumage, each having its own particular tint, so that, although the possession of a good "polish" is absolutely essential in an exhibition Archangel, the true value of the bird as such will, after all, depend upon the arrangement of its lustre in respect to color. The better to explain what is meant, it may be well at this stage to enumerate the different tints that distinguish the sheen of a bird having any pretensions to quality, and these may for all practical purposes be said to consist of three distinct colors, viz., pink, green and purple, the latter also technically known as "plum."—A. A. Goodall in Feathered World, Eng.

PET STOCK.

Origin of the Belgian Hare.

Editor of the American Fancier: Mr. Critchett's article interested me very much, and I must say that a discussion like this one upon the right place of the White hare in the Belgian Hare family is likely to call attention to facts relating to the Belgian Hares of all kinds which will be of interest to all fanciers. Each one of us holds his own theory upon the exact source of the modern English Belgian Hare. Quite probably Mr. Critchett's explanation gives the method by which it was produced, but I hardly think he is right in calling the animal an actual production of the process. The yellow and the black rabbit, it seems to me, have modified the type which previously existed in what I found last year in Belgium to be the rabbit of the fancy there, and which I have described somewhat previously in the American Fancier.

The Red Giant Hare of Belgium has all the markings and coloring of the true English hare, but it varies into the Flemish Giant in shape. The admixture of the English rabbits reduced the round head and heavy bones of the original Belgian and also scaled down the size and weight and so produced the modern English. The basis of the new animal, it seems to me, is to be found in Belgium. By breeding with English I expect to obtain a variety of heavy weights which shall contain the elements of beauty in the English strain and the practical advantages which the English have lost, but it is with the Red Giant as a basis that I am working. The lacing, ticking and red color is preserved and a long thin head will take the place of the round, turtle head of the original Red Giant. The English fancier did this years ago, only he aimed at beauty and grace only, and size went down.

If I understood Mr. Critchett he holds that the basis of the present English Belgian is the native English hare. It is all theory, of course, but I do not agree with that. The English Belgian never gives a yellow in reversion, and the Black Belgian which is sometimes produced occurs also in Belgium, where I saw Black Giants that would make the fanciers of Blacks in America open their eyes in astonishment. One specimen shown to me had reached 18 lbs. in weight and was black as any crow.

So, taking it all in all, it appears to me that the genuine Belgian Hare and the parent stock is to be found in Belgium, which fanciers have only modified without great change. How that originated probably no one can say. In Belgium they are called rabbits; their hare is a small animal, never confined, as five years' imprisonment is the penalty for having one in possession. They call those large hares, Le Geant Lapin Flamand, and in Flemish, Reuzenkonijnen, pronounced Rertz-en-kon-ah-i-nen. F. H. DEWEY.

Westfield, Mass.

GILBERT'S NEW PIGEON BOOK.—The latest and best book devoted to pigeons. Thoroughly American and up-to-date. The author, Major F. M. Gilbert, is world famous. Handsomely bound in cloth. Price $1.00. Free to all sending us two new subscribers.

—Look at our show reports during the season. They alone are worth double the price of subscription.

First Prize Pen at New York.

"RINGLETS" SOAR STILL HIGHER.

AT THE IMPERIAL SHOW OF THE NATION—
MADISON SQUARE GARDEN, N, Y., THE WORLD'S RECORD OF

E. B. THOMPSON'S BARRED PLYMOUTH ROCKS

4 YEARS IN SUCCESSION was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ever accomplished in the annals of the New York Show; Winning during 4 years in succession MORE THAN THREE TIMES AS MANY 1ST PRIZES as any other exhibitor, and as many 1ST PRIZES as ALL COMPETITORS COMBINED, besides more than twice as many Cups and Specials as all, including the superb challenge Trophy, value $100, for best cock, cockerel, hen, pullet and exhibition pen; $100 Sterling Silver Cup for finest exhibit, Grand Special Prize Sweepstakes Cup value $100 presented by the President for best P. Rock cock, cockerel, hen and pullet, any variety. My clean sweep of

FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES

on pullets has never been approached in Madison Square Garden, and stands alone and unequaled.

The world's record of 1st on exhibition pen at New York 3 years in succession is the undisputed Champion. With their 1900 record the "RINGLETS" have won at New York a grand total of 77 PRIZES, 31 of these prizes are 1st and specials, being 17 more 1st and special prizes than won by any competitor in the history of the show. Rare bargains in yearling breeders in lots of a trio or 100. Show bird fit to win in the fastest company. Richly illustrated 24-page catalogue on application. Elegant breeders in any number. Eggs from finest exhibition matings, 1 sitting, $5; 2 sittings, $9; 3 sittings, $12; 4 sittings, $15. ADDRESS 91-tf

E. B. THOMPSON, Amenia, Dutchess County, New York.

MUFFED TUMBLERS FOR SALE.

WINNERS IN ENGLAND AND AMERICA.

The grandest collection of winning Muffed Tumblers ever gotten together is now on sale, and can be seen by appointment and birds selected. I will sell any Muffed Tumbler I own and arrangements can be made to take the entire lot. The varieties are Blue Saddles, Black Badges, Black Mottles (Yellow Rose cock, 1st Boston and Chicago, price $15, one of the best living) and several other odd birds, all winners or will produce winners. My Tumblers possess characteristics peculiarly their own, having been bred carefully for years, and are streets ahead of any other strain. In the past five years I have bred more winners than all others combined. Stock birds sold to others have bred their best birds; why, then, waste time and money by breeding from ordinary stock, when for an ordinary outlay the best birds living can be obtained? Those who would like to win and breed winners are invited to correspond. Prices very low, but nothing in muff legs under $5 per bird. (Some as low as $2.50 in surplus Clean Legs.) Testimonials from dozens who have purchased winners in all parts of the country. Satisfaction guaranteed. State wants fully. See winnings at Birmingham, Eng. (1st and medal), Boston, Chicago and New York. While winning here I had a team of six winning at Birmingham, Eng., the greatest Tumbler show in the world, irresistible argument as to the quality of my stock. 48tf

F. W. GORSE, Box 228, Highlandville, Mass.

Eggs, $2 for 15. 95-tf

L. O. BROMLEY, SILVER CREEK, NEW YORK.

Now is the Time you want Eggs

By feeding your fowls a little

BANNER EGG FOOD AND TONIC

your hens will lay lots of eggs, and you can double your profits, as this is the season of the year when fresh laid eggs are scarce.

REMEMBER, this TONIC does not force your hens to lay; it only brings them up to the pink of condition which is necessary for egg production.

TO THOSE who have never used it, we simply ask you to give it a trial, and be convinced.

PRICES: 1 lb. can, 25cts, by mail, 40 cts; 5 cans $1 on board Ex. at New York. 78-tf

HOERLE'S White Rocks:—1st prize winners at the leading eastern shows. For sale at a bargain, cockerel, 1st at Torrington; 1st and special at Troy, 1900; cockerel, 1st and special for best White Rock in show at Lenox, 1901, Some 1st prize winning females and sire of these birds. Eggs, $1.50 per 13. Stock on approval. FREDRICK HOERLE, 234 Migeon Ave, Torrington, Ct. 88-tf

WETZEL'S Blue Ribbon Buff Rocks are the best. Geneva winnings, 1900, 1 and 2d cockerel, 1st and 2d pullet, 1st and 2d hen, 1st pen and all specials, 35 competing; Middletown, '01, 1st cockerel, 1st, 2d and 3d pullet, 1st hen, 1st pen and specials, 61 head competing; Cleveland, 1901, 1st cock, 1st. 2d and 3d cockerel, 1st pullet, 1st pen, Buff Rock Club's silver cup, 58 head competing; also Association's $10 gold special for best 10 P. Rocks in the show, all varieties competing. Eggs $5 per setting straight. Fowls $5 each and upwards. FRANK WETZEL, Painesville, O. 99-37

BUFF ROCKS.—Better this year than ever before. In addition to my own prize winning stock, I have bought some of the best birds money could buy; birds that have won prizes, or bred from prize winners in most of the leading shows. They are as fine a lot of birds as can be found in this country. Eggs for bal. of season, $2 per 15. RALPH J. WEIR, Cambridge, N. Y. 85-36

HIGGINS' Buff Rocks won 1st prizes at the largest shows in America: At Boston, Hagerstown, Fitchburg, Clinton; in the hands of my customers at Madison Square Garden and large shows in the west. Have some of the grandest matings this season I ever owned. Will sell eggs from same pens as I use myself at $3 or two settings, $5. H. W. HIGGINS, Orange, Mass. 33-tf

I BRED White Rocks 11 years. Have them better this season than ever; pure white, low combs, yellow legs, correct size and shape. At Sanatoga, on 5 entries won 5 1sts. At Harrisburg on 4 entries won 4 1sts and all specials. 200 birds for sale. Eggs, $1 per sitting; $5 per 100. 60-tf D. L. STAUFFER, Spring City, Pa.

EGGS FOR HATCHING,—Buff Rocks, (Burdick's Nuggets direct) White Rocks, (Fishers Island Farm direct) White Wyandottes, (Mack's strain direct). Eggs only $1.50 per sitting or any 3 for $3. Birds farm raised. H. E. CURTIS, Rutland, Vt. 95-07

MY BUFF PLYMOUTH ROCKS have won for me at Madison Square Garden, Boston, Pittsburg, Washington, D. C., and other great shows, proving their quality. Prices are right, too. Stock and eggs for sale. Circular and show record free. MILES LOUER, East Onondaga, N. Y. 81-32

WHITE PLYMOUTH ROCKS.—W. C. Pierce & Co., 1st, 2d, 3d cocks, 96¼, 95¼, 95¼; 1st, 2d, 3d (tie), 4th hens, 96, 95½, 95¼; 3d, 4th cockerels, (tied 2d), 95¾, 95¼; 1st, 2d, 3d, 4th pullets, 96¼, 96¼, 96¼, 96; 1st, 2d pens, 192 9-16, 191 5 16; also best display. This was made in hot competition, 78 birds in class. This record with our wonderful winnings at Chicago last year stand alone and unequaled on this variety. W. C. PIERCE & Co., Indianapolis, Ind. 73-24

BEAN'S BUFFS are the real winners as the following records for 1900 will show: At Cambridge, N. Y., one 1st, four 2ds, three 3ds; Watertown, N. Y., two 1sts and three 2ds; Poughkeepsie, three 1sts and three 2ds; Dryden, N. Y., four 1sts and two 2ds; Trenton, N. J., one 1st and two 2ds; York, Pa., five 1sts and four 2ds; Lancaster, Pa., four 1sts and two 2ds; Hagerstown, Md., in the hottest competition of the year, four 1sts, two 2ds and three 3ds. This is an unequalled record. Write for prices on show and breeding birds. All my stock is farm raised. Address F. G. BEAN, Fairview Village, Mont. Co., Pa. 73-24

BARRED PLYMOUTH ROCKS.—The 1st prize hen at the Johnstown show was pronounced by competent judges the best of the season. She won in the very hottest competition; so did my other hens. My stock is only of the very best and held its own at leading shows of America. Stock and eggs for sale. Eggs $2 setting. JOHN C. RICE, Johnstown, N. Y. 90-tf

"PARALLEL(=) BAR" Rocks.—Eggs during March and April, $2 per 13; $8 per 100. Stock direct blood of Gardner, Thompson and Montauk. New York winners. My birds have won in good company and chicks from these eggs will win for you. Send for leaflet. H. T. BROWN, Box 471 a, White Plains, N. Y. 79-30

JAVAS.

JONES. the "Java Man."—Mottled Javas, Blk. Javas and Silver Duckwing Leghorns. Satisfaction every time or your money back. Eggs $3 per 15 and no reduction. JOHN R. JONES, Suffield, Conn. 39tf

WYANDOTTES.

ALPHA STRAIN Silver Wyandottes. Winners wherever shown. Have good combs and shape, standard weights and plumage. They are line bred and good layers. Look up my record in the Fancier. Eggs, balance of season, $1 per setting. WM. BINGLEY, 103 McKinley St., Torrington, Ct. 75-26

MADISON SQUARE Garden Winners. We have won 1st prizes two successive years at the above show on our White Wyandottes. 1901 won 1st hen, 3d and 5th pullets and 3 specials on 6 entries, 1900, won 1st cock, 3d hen and 2 specials. For the balance of season, will sell eggs at $1 per 13. Booklet free. ALLEN C. ROBERTS, Spring City, Pa. 02-tf

"WHO KILLED COCK ROBIN?"—Robbins' Buff Wyandottes are the real Buff with solid Buff wings and tails, and have won prizes in Boston, Cambridge, Rochester, Syracuse, Troy and Poughkeepsie, N. Y.; Brattleboro, Vt. and Philadelphia, Pa. I have all my prize winners in my yards and will sell eggs at $5 per 13 straight. Stock for sale at all times. Satisfaction guaranteed or money refunded. R. B. ROBBINS, Cambridge, N. Y. 42-tf

PISER'S BUFF WYANDOTTES are always winners. One year ago at Cambridge, N. Y, in the hottest competition ever known, I won 2d, 3d pen old, 1st, 2d pen young, 1st, 3d hen, 1st, 2d, 3d cockerel, 1st, 2d, 3d pullet. My customers are doing the same all over the country and in Canada and England. A pen from my yards will breed you winners next season. See add in display column. L. C. PISER, Shushan, N. Y. 77tf

THOMAS MOORE, Canada, has shipped us 16 cockerels, open laced pure English stock, for crossing on and improving on American stock. They breed the much desired epen centered pullets. They were bred from a trio of winners of 25 prizes in England; this trio the only birds bred on the place. Price $3 and $5 each. Eggs from these cockerels mated to best American females, $3 for 15. WOOD & FREEMAN, Fitchburg, Mass. 94-tf

MOON'S GOLDEN WYANDOTTES.—The Marvel Strain. At the N. Y. Show, 1901, on 13 entries, won 15 ribbons including the leading specials, the greatest record ever made at a big show. Stock and eggs for sale. JESSE A. MOON, New London, Conn. 87-38

BUFF WYANDOTTE prize winners. Won 8 regular and special prizes on 11 entries at Boston, New York and Hagerstown the past season. Eggs, $5 per sitting. Fair hatch guaranteed. 91-03 JAS. M. GILBERT, Box 809, Bethel, Ct.

DR. SANBORN'S BUFF WYANDOTTES won 1s1 on pen, with 7 pens in competition, at his only exhibit this season. at South Farmingham. Aiso 2 2nds on single birds. No better blood in the East. Average egg yield, ,99, 196 eggs. Eggs $2 for 13, $5 for 40. Cockerels $5, pullets $4 up. N. W. SANBORN, Wellesley Hills, Mass. 87-38

BUFF WYANDOTTES.—W. C. Pierce & Co., 1st, 2d cocks, 94¼, 93; 1st, 2d, 3d, 4th hens, 94¼, 94¼, 94¼, 93½, 1st, 2d cockerels, 92¼, 92, 1st, 2d, 3d, 4th pullets. 94, 93¾, 93, 93; 1st, 2d pen, 186 15 16, 184 9-16. There is no use mentioning the above the scores speak for themselves. W. C. PIERCE, & Co., Indianapolis, Ind. 75-26

SILVER Wyandottes as good as the best, four regular and one special prizes at Madison Square Garden, 1901. My birds are large size, clear centers and good layers. Males in breeding pens above Standard weight. A few cockerels for sale. Eggs, $2 per setting, 2 settings, $3. HECTOR W. MILLSPAUGH, Walden, N. Y. 72-tf

BUFF and White Wyandottes. My birds were prize winners at Johnstwwn. In White Wyandottes, four entries, won 2d cock, 3d hen, 2d ckl, 1st pullet and special for best cock, hen, ckl, and pullet. At Troy, 6 entries, 1st cock, 1st hen, 1st pullet. At Matteawan, in Buff Wyandottes, 5 entries, 1st cock, 1st hen, 1st pullet, 1st pen. All this in hot competition. Eggs for special matings, $3 per 15. Other matings, $1 per 15, $5 per 100. Catalogue free. EDGAR BRIGGS, Poughkeepsie, N. Y. 87-12

WHITE WYANDOTTES.—W. C. Pierce & Co., 1st, 4th cocks, 94¾, 93¾, (tied 2d); 1st hen, 96½; 1st cockerel, 95, 4th pullet, 96¼, (tied 1st and one other scoring 96¼ that did not win a place); 1st pen, 191¼. Here again in hot competition we won the big end of the prizes, especially the first, losing only one and tieing in score with this winner. W. C. PIERCE, Indianapolis, Ind. 75-26

THE WINTER LAYERS of the 19th century are Geo. Bradley's White Wyandottes. Have been bred for layers for generations, standard in weight, white in plumage, pullets lay at six months old. Eggs, $2 per 13; $5 per 39. Stock for sale at all times. Correspondence a pleasure. 39tf GEO. BRADLEY Dryden, N. Y.

HENS WILL SIT
and do their level best when given the right kind of a nest, the right number of eggs, the right kind of food, the right kind of care and dusted with the right kind of insect powder. For this latter purpose Lambert's Death to Lice fills all of the requirements.

EGGS WILL HATCH
when the breeders are kept free from lice, and when they have daily out door or scratching shed exercise. Under these conditions eggs from healthy birds are usually well fertilized. When good eggs fail to hatch the trouble is often outside of the eggs. Lambert's Death to Lice Powder never injures the fertility of eggs for hatching, the sitter or the little chickens should they hatch in a handful of it.

CHICKS WILL GROW
when started free from vermin and kept so from the shell up. If allowed to become lousy they lose strength and vitality, which will stunt them in growth or cause an early demise. More chickens die every year from this cause than any other, while a little Death to Lice Ointment would save their lives. 73-24

DEATH TO LICE REMEDIES:
Death to Lice Powder for dusting layers and sitters—5 oz. sample, 10c postpaid; 48 oz., 50; 100 oz., $1.00, from here or nearest agency to you by express. Death to Lice Ointment for head lice on children or chickens also scaly shanks on fowls, 10c and 25c postpaid. Death to Lice Special, for making a liquid louse or mite killer and for mixing with the regular powder for fleas on dogs, moths, etc., 4 oz., 10c; 16 oz., 40c by mail postpaid. Death to Lice Liquid for spraying poultry houses, painting roosts, etc., (already prepared) 1 qt., 35c; 2 qts., 60c; 4 qts., $1.00, f. o. b. here. Book and "How Best to Set a Hen" sent free. **D. J. LAMBERT, Box 248, Apponaug, R. I.**

CIRCULATION WORLD-WIDE.

The American Fancier

A WEEKLY JOURNAL DEVOTED TO

Poultry, Pigeons and Pet Stock.

VOL. XVI. NO. 407. JOHNSTOWN, N. Y., SATURDAY, JUNE 22, 1901. PRICE FIVE CENTS

ADVERTISEMENTS CLOSE TUESDAY NOON.

Winner of 1st at Pittsburg, Feb. 18, '01. She and five other pullets we had at this show were hatched in June. All were above Standard weight and all laying at the time. During the 6 days of the show this pullet and the winners of 2d and 3d prizes laid 16 eggs. That is why we like them; they are able and willing to lay eggs. This pullet, more than the other two, has the "egg shape"—The others are more typical Wyandotte in shape and we expect them to win over her;—but judge Drevenstedt said: "This one is good enough for me."

We have in our Partridge Wyandotte yards at Beaver Hill Farm FIFTY NINE FEMALES. Sixteen of these have been entered a total of 20 different times this year at seven leading shows, including New York and Chicago, and have won

Eight First, Four Second, Four Third and Two Fifth Prizes, getting left only Twice.

Six of our seven males now mated with these females have, at the above shows, won

Eight First, Two Second, Three Third, One Fourth Prizes in remarkably hot competition.

Busy as Beavers are the Birds on

SILVER AND PARTRIDGE WYANDOTTES AND SCOTCH COLLIE DOGS.

Of these last we now have some fine youngsters ready for shipment.

The proprietor of Beaver Hill Farm began breeding Silver Wyandottes twenty years ago. He helped to make and revise the Standard for them. He breeds the Whittaker strain exclusively and adheres to Line Breeding and Single Mating Methods. :-: His Booklet on WYANDOTTES Free for the asking.....

..Prices of Eggs Reduced for June..

SILVERS $2 SETTING; 3 SETTINGS, $5.
PARTRIDGE $3 SETTING; 3 SETTINGS, $8

A few Breeders of both varieties for sale soon.

BEAVER HILL FARM, BEAVER, PA.

Winner of first and Gold special at Chicago, 1901. Also head of first pen at Pittsburgh.

We have in our ten breeding pens at Beaver Hill Farm, a half dozen male Silvers that we esteem more highly than this one; but he was considered good enough to be worthy of the following:

A FEW OF THE MANY PRESS COMMENTS.

1st cock, good shape, nice silvery bird, firm in wing bars, open laced and clean all through, one of the best handled this season.—AM. FANCIER.

The best Silver Laced Wyandotte cock that we have seen; grand shape and color, an all around good bird.
FANCIER'S GAZETTE.

A cock that is a wonder in the perfection of form and color.—COM. POULTRY.

1st pen one of the attractions of the show; three of these females are exceptional beauties, the other being a trifle darker than the rest. The cock is a grand bird in shape and color, a treat to look at.—[AM. FANCIER'S comments on the Pittsburgh First Prize Pen.

Champions at Pittsburg, 1901....

BUCKEYE CHIEF.

In a class of 162 we won 1st and 4th on cocks; 2nd cockerel, (losing 1st on condition, easily best male in class); 2nd and 3rd hens; 3rd and 4th pullets; 2nd breeding pen and our 1st cock and 2d cockerel were the talk of the show.

AT CANTON we nave been holding the reins for years. 1898, Bridge, judge, 1st cock; 1st cockerel; 1st and 2d hen; 1st and 2d pullet. At Canton, Jarvis judge, 1st cock; 1st hen; 1st and 2d pullet; 3d cockerel; 1st pen. Canton, 1900, Lambert judge, 1st ck; 1st cockerel by error of 3¼ points in weight; 3d pul; 4th and best of all, 1st breeding pen. Canton, 1901, Myers judge, 1st cock, 92½ 3rd cock, 92; 1st cockerel, 94; 3rd cockerel, 92¾ and A CLEAN SWEEP OF 1st, 2d and 3rd PULLETS, 94¼, 9 ½, 93¼; 3rd hen, 92½; 1st breeding pen 187.

Besides this I have sold the winners for many shows this season.

EGGS I sold last year produced winners! Why not book you for a few settings and for once in your life have Barred Rocks of stand ard shape and color? Don't hesitate, but send stamp to-day for my illustrated catalogue explaining all.

First Prize Pen at New York.

"RINGLETS" SOAR STILL HIGHER.

AT THE IMPERIAL SHOW OF THE NATION—
MADISON SQUARE GARDEN, N, Y., THE WORLD'S RECORD OF

E. B. THOMPSON'S BARRED PLYMOUTH ROCKS

4 YEARS IN SUCCESSION was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ever accomplished in the annals of the New York Show; Winning during 4 years in succession MORE THAN THREE TIMES AS MANY 1ST PRIZES as any other exhibitor, and as many 1ST PRIZES as ALL COMPETITORS COMBINED, besides more than twice as many Cups and Specials as all, including the Superb challenge Trophy, value $100, for best cock, cockerel, hen, pullet and exhibition pen; $100 Sterling Silver Cup for finest exhibit, Grand Special Prize Sweepstakes Cup value $100 presented by the President for best P. Rock cock, cockerel, hen and pullet, any variety. My clean sweep of

FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES

on pullets has never been approached in Madison Square Garden, and stands alone and unequaled.

The world's record of 1st on exhibition pen at New York 3 years in succession is the undisputed Champion. With their 1900 record the "RINGLETS" have won at New York a grand total of 77 PRIZES, 31 of these prizes are 1st and specials, being 17 more 1st and special prizes than won by any competitor in the history of the show. Rare bargains in yearling breeders in lots of a trio or 100. Show bird fit to win in the fastest company. Richly illustrated 24 page catalogue on application. Elegant breeders in any number. Eggs from finest exhibition matings, 1 sitting, $5; 2 sittings, $9; 3 sittings, $12; 4 sittings, $15. ADDRESS 91-tf

The Belgian Hare Guide

This book is acknowledged to be the finest and most reliable book out on the Belgian hare industry. It contains complete and practical information on the following and many other subjects pertaining to the industry: History and Origin, The Belgian for Utility, The Belgian for Fancy, The Business and its Outlook, How to Begin, Houses and Hutches, Foods and Feeding, Feeding Green Stuff, Mating and Breeding, Care of the Young, Pedigrees, Score Cards and Judging, Belgian Hare Color, Dressing and Cooking, Diseases and Remedies, Preparing for Exhibition, Crating and Shipping, Caponizing, Queries and Answers, Miscellany, Belgian Hares vs. Poultry, The Belgian in England, The Belgian in California, Black Belgians and Flemish Giants. It is elegantly printed on fine paper, illustrated with numerous beautiful photo engravings, and is substantially bound. No one interested in Belgians can afford to be without it. Send your order today. Price, 25 cents

Now is the Time you want Eggs

By feeding your fowls a little

BANNER EGG FOOD AND TONIC

your hens will lay lots of eggs, and you can double your profits, as this is the season of the year when fresh laid eggs are scarce.

REMEMBER, this TONIC does not force your hens to lay; it only brings them up to the pink of condition which is necessary for egg production.

TO THOSE who have never used it, we simply ask you to give it a trial, and be convinced.

PRICES: 1 lb. can, 25cts, by mail, 40 cts; 5 cans $1 on board Ex. at New York. 78-tf

MUFFED TUMBLERS FOR SALE.

WINNERS IN ENGLAND AND AMERICA.

The grandest collection of winning Muffed Tumblers ever gotten together is now on sale, and can be seen by appointment and birds selected I will sell any Muffed Tumbler I own and arrangements can be made to take the entire lot. The varieties are Blue Saddles, Black Badges, Black Mottles (Yellow Rose cock, 1st Boston and Chicago, price $15, one of the best living) and several other odd birds, all winners or will produce winners. My Tumblers possess characteristics peculiarly their own, having been bred carefully for years, and are streets ahead of any other strain. In the past five years I have bred more winners than all others combined. Stock birds sold to others have bred their best birds; why, then, waste time and money by breeding from ordinary stock, when for an ordinary outlay the best birds living can be obtained? Those who would like to win and breed winners are invited to correspond. Prices very low, but nothing in muff legs under $5 per bird. (Some as low as $2.50 in surplus Clean Legs.) Testimonials from dozens who have purchased winners in all parts of the country. Satisfaction guaranteed. State wants fully. See winnings at Birmingham, Eng. (1st and medal), Boston, Chicago and New York. While winning here I had a team of six winning at Birmingham, Eng., the greatest Tumbler show in the world, irresistible argument as to the quality of my stock. 48tf

"Profitable Poultry Keeping in All its Branches."

This is the title of the new and elegant Catalogue issued by the Cyphers Incubator Co., for 1901. It contains 224 pages, 8x11 inches in size, over 200 fine new half-tone illustrations and a wealth of interesting, down-to-date matter, covering the subject of **Poultry for Profit** in all its branches.

This is a Brand New Book,

not a re-hash of old ones. Contains special articles written by experts, and illustrates and describes over fifty of America's largest and most successful Duck, Broiler, Roaster and Egg Farms. It also contains the endorsements of over one hundred of the foremost breeders of this country—men and women who are using the **Cyphers Incubators**—and shows photographic views of many of their poultry plants and favorite poultry houses. Ask for Book No. 9 enclosing 10c in stamps, and address nearest office.

The American Fancier

(J. H. Drevenstedt & Edward Bartlett.)

TYPOGRAPHICAL UNION LABEL FULTON COUNTY No. 756

SATURDAY JUNE 22 1901

From the Editor's Perch.

Superintendent of Poultry George H. Burgott writes: "I find a constant increasing interest in the poultry exhibit at the Pan-American Exposition, which occurs October 21st to October 31st, with all the entries closing on September 16th, and the indications are that the largest show ever brought together will be seen at the Rainbow City on these dates. I believe every brother fancier in the country should give himself the pleasure of visiting the Exposition at this particular time." From other sources we learn that many birds are being groomed for the Pan-American, and patriotic spirit demands an overflowing entry. With such a triumvirate as Burgott, Twombly and Rackham in charge, there should be no lack of entries.

***

The following, clipped from a London (England) paper by a friend of Mr. A. V. Meersch, seems rather startling:

"A Scarborough gentleman was rather bewildered the other morning to find no fewer than 38 common pins and a shoemaker's brass sprig embedded in the white of his breakfast egg. The egg had been bought in the Scarborough market, and it seems that one or two other eggs purchased there about the same time have been found to contain two or three pins each. The extraordinary egg is being preserved in spirits by a Scarborough naturalist."

This reminds us of the story that Deacon William Spoll, of this city, loves to tell. A certain party sold the deacon 13 eggs. The latter, it seems, were pricked with a pin and failed to hatch. The party thought it a good joke, and meeting the deacon on the street asked how the eggs hatched. The deacon threw his neck in that south-western limited style of his and remarked: "Fine, sir! Every one of the thirteen. And the strange part of it is, every blooming one of them has a pin stuck in its back."

***

We paid a brief visit to Mr. Frank Beagle Zimmer one day last week. "Zim" lives but two miles from our office, but never leaves his own fireside to visit us or "the boys" except in the winter months. He is too busy raising the two B.'s, viz: Beagles and Bantams. Some 58 Beagles sang the anvil chorus when we entered the gate, and a fine lot of thoroughbreds they were! The Bants were not so vociferous, but looked volumes as far as quality was concerned. To see the master of the hounds and flocks, attired in cardinal red golf jacket and corduroy pajamas, walk through the yards and kennels is a rare sight. The little Beagles murmur sweet words of welcome, while the dainty Banties sing joyfully, when the sturdy figure of "Zim" appeareth, holding in his hands a pan containing the juicy morsel, cooked and distilled from some old Gloversville horse. It is no wonder that "Zim's" Beagles and Bantams thrive when fed on horse meat of such transcendent quality as only Gloversville can furnish. "Zim" reminds us of old O. K. Sharp, of Lockport, N. Y. Said O. K. once upon a time: "Give me a dead horse or a cow and plenty of corn and I can feed and raise chickens to beat ——." The dash in the latter sentence came close to knocking out some of Patrick Henry Jacobs' scientific rations on feeding fowls. But that's another story.

***

E. C. R., Hudson, Mass., writes:

"I met with a misfortune this spring with my hens. I bought a barrel of broken crackers and fed one feed to 88 pullets and lost 72 of them. The crackers proved to be half salt. The firm that sold the crackers marked them 'chicken feed.' Has a firm a right to sell such stuff to poultrymen without warning them of its contents? I would like to hear from you on the subject."

The firm had no right to sell salted crackers for "chicken feed." Salt is a deadly poison to young chickens. We remember a case some four years ago where over two hundred chickens were lost by the feeding of salted crackers. The concern that sold salted crackers and labelled them "chicken feed" should be prosecuted and made to pay the loss sustained by our subscriber and correspondent.

***

Mr. C. J. Ross, the jovial representative of Commercial Poultry in the city of New York, made a brief but pleasant call on us last Saturday. He reports business in a flourishing condition and expects to visit the "chicken boys" in this vicinity some time in July.

***

The question is often asked by those interested or contemplating raising their own or some one else's hares, "Does it pay for meat?" says the East Los Angeles Breeder. I contend that it most decidedly does and I know whereof I speak, as I have repeatedly put ten to twenty young bucks six weeks old (just weaned) into my corral and weighed their rolled barley to them two or three times a week, having a hopper shaped self feeding box that will hold ten pounds, and if feeding for meat, I give them all they can eat, which will average for first month (including hay, of which they will eat the same value) 5 cents. Second month, 8 cents. They are then three and one-half months old and the bucks should be separated from the does. They should now weigh between four and five pounds and are at a good age to sell, though I have kept them another month and made it pay. —Poultry Advocate.

Young Belgian hares for edible purposes have sold readily in Johnstown at 50 to 65 cents each. The opinion in general is: When properly cooked, they are excellent. The writer of these notes can state without hesitation, that Belgian hare's meat is relished for its tenderness, whiteness and flavor by everyone that has been fortunate enough to taste it. There are many who prefer it to chicken meat. But the average chicken meat is not always what it should be while the average Belgian hare meat is usually very good.

***

This leads us to again caution poultry raisers to pay particular attention to the quality of the products they send to market. An insipid broiler, a flabby young duck, an ill fattened rooster, duck or goose will make many a victim sigh for a tender Belgian hare. The latter is easier to produce and cheaper in price. But the real well prepared, properly fattened chicken, duck or goose will always be in demand by epicures and those that relish something good in the fowl line. As to the turkeys, this American bird will always be the star of fowldom notwithstanding the careless methods of many turkey raisers in marketing their produce.

***

We are not alarmed at the popular demand for Belgian Hare meat and the cry that it will supplant chicken meat. No doubt hundreds, aye, thousands, of cans of Belgian Hare meat will be sold as chicken meat and many a chicken salad will have "hares in it," but who is to blame? It is "up to" our practical poultry raisers to put chickens on the market that will satisfy the palate. Some of the two-legged things sold as "chickens" are enough to make a rubber hose envious and the ivories of a healthy mortal tired.

Fancy Pheasants and Their Allies.

(Continued from June 15th Issue.)

TREATMENT IN GENERAL.

As the habits of the common fowl are typical of those of the Pheasant family in general, so their treatment will not present any special difficulty to people acquainted with poultry, if the wilder and more vicious nature of most of the Pheasants be borne in mind. A pair of Pheasants or a pet cock bird can be kept in any small covered shed, but in such close quarters the hen may often be in danger from the fitful temper of her savage mate, who is usually less chivalrous than Chanticleer, and the young from such birds, even should the hen lay, are less likely to be vigorous than those of birds better housed, and few people nowadays care to keep birds without some idea of breeding from them.

Should anyone be desirous, however, of keeping a few Pheasants merely to look at, several males of the same or different species may be put together in an ordinary fowl-run, where they will thrive and agree well, if no hens are introduced; but even then a sharp eye should be kept on them when first put together, or when any show signs of a bullying spirit. For Pheasants are game birds in more senses than one, and where pairs are kept it is quite out of the question to let even different species run together, as the jealous males would fight to the death in such a case.

For breeding Pheasants, then, each pair or pen should have a shelter shed and open run to themselves. The latter should be well turfed and planted with bushes; and the part nearest the front should be gravelled or sanded, as the birds are sure to run to and fro there, and thus ruin the grass at that point. Perches should be provided, natural branches serving and looking best, but the perches out-doors should be all lower than that within the shed, so that the birds may be encouraged to roost inside. In the shed also will be placed the food and the dust-bath. Pheasants may have corn of all the ordinary small kinds constantly before them, though too much maize should not be given, or they may be fed morning and evening, like fowls. In the latter case the morning feed should consist of meal or other soft food. Green food, especially lettuce and small fruit, should always be given, especially if the run is getting bare of grass and insects, or, in default of them, some chopped cooked meat or hard boiled egg be supplied at frequent intervals.

COVERED AND UNCOVERED RUNS.

When I spoke above of an uncovered one, I meant, of course, one exposed to the weather; but it need not be open altogether, and, indeed, must not be unless the birds are pinioned or have their wings cut. If pheasants are to be pinioned, the whole of the first or knuckle-joint of the wing, carrying all the flights, must be cut off, and even then a spring and flutter will take them to a good height. Therefore, although the shortness of the flights in birds of this family prevents the result of the operation from being visible while the wings are closed, I do not advise anyone to pinion Pheasants unless they have a large, safe, and well enclosed run, whence it would be a pity to exclude them, while it is too big to be netted over. The worst of cutting the wings of Pheasants is that, as the quills come away and are reproduced more or less gradually, the bird may be regaining the power of flight without your knowledge and to your subsequent disappointment. For, though Pheasants do not fly far, they cannot be trusted with complete liberty except in extensive grounds or woods, and even there they are liable to stray, fight or interbreed.

So that most people will find it necessary to keep their birds under wire; and in this case there should always be a string netting stretched under the wire one to prevent injury to their heads should they fly up on any fright, as they spring with great force and are liable to scalp themselves, by which they will be disfigured or killed outright. The shelter shed should be open to the front on the south side, and should be netted so that the birds can be confined in it if necessary. It is easy to make some arrangement by which the door can be closed on them by means of a string if they are inclined to dart out when an attempt is made to shut them in.

BREEDING.

Pheasants are commonly sold in pairs, as being scarce and dear, but two to four hens may be put with one cock, if they themselves fall in with the arrangements; for, though cock Pheasants are naturally addicted to polygamy, the hens, in some cases, strongly disapprove of it, and refuse to agree together. A less creditable trait in the Pheasant character is the cruel disposition of the males in some species, which will often kill the hen outright for no reason, apparently, but the possession of a naturally savage disposition. In the case of such ruffians, it is said to be a good plan to connect the legs of the male bird by a piece of soft string long enough for him to walk easily but not to run, and thus allow the hens a chance of escape, until he has got used to their presence and treats them better. Moreover, a run for breeding should, as above remarked, contain plenty of bushes,

which will give shelter to the hen if unduly persecuted.

Another vice cock Pheasants are liable to is that of egg-eating, which is best cured by giving the offender hard artificial eggs to amuse himself with till he is convinced that eggs are too uninteresting to meddle with. Pheasant eggs are apt to be left lying about the pen, for the hens will seldom lay, sit and hatch in the regular way, though this occasionally happens.

As a rule, however, all that can be done is to induce the hen to lay regularly in one place by screening it with living bushes, or a lean-to of brushwood faggots. The eggs must then be set under a steady light hen—half-bred Silkies are stated to be the very best for the purpose. The Silky, however, is exceedingly good, and as it is itself a pretty and ornamental bird, is doubly deserving of employment.

The young should be fed oftener than chickens and get more animal food. Ants' cocoons (commonly called "eggs") are good, but tend to make the birds dainty; well-scoured gentles may be given in moderation. Custard, crushed hemp, and millet and canary seed should, however, form the staple diet at first, with minced boiled meat, the various game meals advertised, and larger grain as they grow older and get feathered. Green food should always be given, even if they are being reared on turf, as they ought to be. Pheasants eggs take several days longer in hatching than those of fowls, a fact which should be borne in mind, or disappointment may be unnecessarily felt at the non-appearance of chicks at the end of the regulation three weeks. But the family is such an extensive one and comprises birds of such different sizes and styles, from the turkey to the Quail, that it is not surprising that the incubation period varies a great deal.

As pheasants are liable to the ordinary diseases of poultry, great care should be taken in selecting healthy hens to rear them, lest the young become infected by their foster-mothers. They are particularly liable to the attacks of the gapeworm, for which reason many pheasant-rearers do not allow them water when young, but there is no good ground for such unnatural treatment and general cleanliness is the best preventive.

HANDLING AND TRANSPORT.

The most likely cause of trouble with full-grown birds, apart from fighting, lies in their nervous disposition and violent movements when alarmed, the strength of these birds, compared with poultry, being something remarkable. You should always "take two hands" to a pheasant, and never seize it by one limb only; and it is better to use a shallow, strong net, like a landing-net, to secure them. Beware, also, of the sharp spurs of the cocks. Cages or coops for Pheasants should always have a padded roof, or a canvas ceiling below the top, and should not be higher than the birds require to stand upright in; the front should also be made of wooden bars, much too close for them to get their heads out. The floor should also be of wooden bars, with a space beneath to facilitate cleaning.

For short journeys the ordinary poultry hamper can be used, these being now so well constructed for the saving of birds' persons and plumage. But it should be mentioned that in a long journey, such as a sea voyage, it is quite hopeless to expect the long-tailed species to remain in good trim and be comfortable; and therefore their exuberance of caudal appendage should be reduced to a more reasonable length in the event of such an ordeal.

All the finest members of the present family, with the exception of the turkeys, inhabit Eastern Asia, India being particularly rich in species. But many are bred so successfully in Europe nowadays that the importation of some species has long ceased, and there are indications that this will soon be the case with others also. My friend Mr. W. Rutledge of Entally, Calcutta, has long been in the habit of getting many of these splendid birds down from the interior of India, and I shall be indebted to him for a good deal of information about them. The hardiness of the Pheasant constitution is well shown by the way in which they endure the long journey from the hills, carried in small baskets on men's heads. But, unlike most other birds, they are very intolerant of heat, and few hill species can live through an Indian summer. This will need to be remembered at times by amateurs in England.—F. Finn, B. A., F. G. S., in the Feathered World, England.

Maunder's Mentionings.

Editor American Fancier: I have been confined to my room for the past six weeks owing to sickness, and as yet, am only able to get around for a short time each day, but when I was strong enough to read the American Fancier, I saw an article in the April 13th issue signed Mg'r L. K. P. Y., (and I should say the writer was ashamed to sign his name to his articles, and after reading same I don't blame him,) regarding Mr. McGrew's statement, re green sheen on an imported bird, I do not doubt it. There are breeders in England who try and cater to the American fanciers, and I am pleased to hear, in this one case, it was such a success. But Mr. Initials failed to notice that Mr. McGrew completely overthrew his own statement when he stated that Black Cochins had green sheen because it was the natural color for them. Mr. McGrew says that the early day Cochin and other black fowls were simply black, but as fast as they could bring it about the breeders have added the sheen. Now let me ask Mg'r K. L. P. Y. one question (excuse me if I have the wrong initials.) for what reason if as you claim, do all black fowls have green sheen? The latest Standard says for Creve Cœurs and La Fleche, plumage rich, glossy black throughout, and for Black Games reads, plumage black with metallic lustre. Now you can readily see that the color of black fowls according to the Standard, reads three different ways. I shall be very much pleased to have Mg'r. L. K. P. Y., enlighten me as to why the Standard does not give the color of plumage the same on all black fowls.

Now Mr. Editor, while laying in bed for four weeks, I have tried hard to commit to memory those beautiful verses at the bottom of letter, but I failed to accomplish the task. I certainly must be a back number when I can't even learn such poetry, not to say a word about my admitted inability to write same. Would suggest that you start a page for poetry only.

FRED. MAUNDER.

Buffalo, N. Y.

Transfer of Stock.

This is to certify that we have this day sold and shipped to Mr. S. J. Foster, Prager, Pa., the Silver Sebright Bantam cock, winning first at Philadelphia and at Orange last winter, and the second prize Buff Cochin Bantam cockerel at Erie, Pa., last December, scoring 94 by Bridge, and bought by us of Mrs. A. E. Blethen, Erie, Pa. These males will make splendid breeders and winners for Mr. Foster.

MILLVILLE POULTRY FARM CO.,
M. F. DELANO, Pres.

—Pigeon men and hen men should push the American Fancier. Advertisers claim they get better results than from any other paper.

White Bantams.

White as the purest driven snow
Each of us are, we'll let you know.
Line the five of us up in a row,
Surely we'll please by our station low.
First in line comes the Cochin broad,
Round as a ball, bare toes outlawed.
Second, the proud little Japanese.
Tail high in air, legs too short to freeze
Third, the beautiful White Rose Comb,
Alert and bright, e'er ready to roam.
The fourth, the pet of our boyhood days,
With voice tuned up for roundelays;
Tis the Booted bird. They started in
For Bantams name and fame to win.
Then last on the list, but not least by far,
Comes the Silky with face as black as tar;
Feathers they've none, but all will see
Hair like silk where the feathers should be.
Thus with plumage as clear as snow,
Two things are certain, and this we know;
That worthy are we of a place on the list,
And that as "prize winners" we'll never be missed.

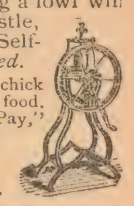
—JOHN G. QUINIUS.

Dayton, Ohio.

In-Breeding, Line Breeding and Strain Breeding.

In your February issue Mr. Henry Hess under the heading "Strain vs. Score Breeding," says, "Give me a good individual with an honest score and I don't much care for whose strain it may be."

In your March issue Mr. W. J. Hodges under the heading "Individuality vs. Strain" praises the position taken by Mr. Hess and makes a vigorous tirade against "incestuous inbreeding, for this is what line breeding is" adding "until very lately it was generally understood that inbreeding weakened the vitality and thereby destroyed the general usefulness of all breeds of poultry or animals, but presto-change, and it is no longer inbreeding, but is line breeding or strain breeding, and whereas inbreeding was injurious, line breeding is the whole thing."



Such statements work a very great injury to the younger poultry breeders of this country. The man who will follow up the theory that he must cross new blood on his flock every year, while he may occasionally produce a high scoring bird, will never produce a flock of birds of any merit. A breeder should not be satisfied with growing a few high scoring birds and a large per cent of culls. It should be the aim of every breeder to be able to raise year after year a flock of birds of uniform grade, without any culls. That can not be done by crossing strains every year, neither can it be done by introducing a direct cross of new blood every year, whether the new blood is an inbred bird or not, although the results would be better from using an inbred bird than from a cross-blood bird.

The prevailing prejudice against inbreeding fowls is worth tens of thousands, if not hundreds of thousands of dollars annually to the large poultry breeders of the country, by enabling them to sell thousands of cockerels to purchasers who would get better results by using the ones they had at home.

The great scientist, Darwin, in working out his theories of the "survival of the fittest," doubled the size of his chickens after twelve or fifteen years of successive matings of brother and sister! He selected each year the strongest and largest for his next year's matings.

If you mate fowls of weak constitution or those that are sickly, you will not grow strong chicks. On the other hand my experience and experiments, beginning thirty years ago, have led me to know that you can grow strong chicks from strong birds, no matter how closely related they may be.

I presume that none of those who object to inbreeding will undertake to prove that the wild birds select non-related mates every year. They certainly breed truer to points and to feather than our standard breeds of chickens. I believe that the birds remain year after year in coveys or families, and are inbred to a great degree. I have nothing on which to base this idea more substantial than imagining that the same flock of birds return to my trees each year.

Stearns New Model No. 7
Ball Bearing Bone Cutter
Back Geared Three to One.
It is geared to save power, making it the easiest running, fastest cutting bone cutter ever built. It will cut anything a fowl will eat—green or dry bone, gristle, meat, corn or vegetables. Self-regulating. *It cannot be clogged.*
Green cut bone brings the young chick to maturity quicker than any other food. Our book, "How to Make Poultry Pay," explains how and why. Sent *free.*

E. C. STEARNS & CO.,
Box 12, Syracuse, N. Y.

One of the best strains of White Wyandottes in the west, having the best lot of combs, and the only flock I have ever visited where there was an absence of brassy backs in the cocks, has been established, in the past ten years, by judicious selection and inbreeding, beginning with a flock that had very large combs and cream tint backs.

Mr. Hodges says: "I know that two poor combs will not produce a good one." If they are not line bred birds you do not know what they will produce, and they are just as likely to give you a fair proportion of good combs as of bad. That is exactly why a bird that is not line bred, no matter how high the score, is of little value as a breeder; because you cannot tell a thing about what you will get. But strong, healthy birds, the result of several generations of intelligent and judicious inbreeding will have their excellencies so fixed that you can gamble to a certainty on them being transmitted. I would prefer for breeding an 85 point bird, male or female, thus bred, to one scoring 95 points bred on the hit or miss plan.

Years ago that noted authority on poultry, Judge I. K. Felch, outlined a plan of breeding for establishing a strain. His plan has been followed in part or wholly by many breeders for years past.

You have recently published several fine articles along the same line from the pen of Judge Thos. F. Rigg, and I am sure the judge will not take any exceptions to a friendly criticism of his article on "Line Breeding" in your March issue. It seems to me that it is a mistake to advise a man who has just purchased a trio of fowls, to use only one pair in his breeding operations for the year. It is better to have two strings to his bow than one. As the pullets are supposed not to be sisters, in fact, probably not related to the cockerel either, as most beginners will order a trio not related, he may be discarding the pullet that will produce the best chicks. If it is a direct crossing of blood or strains he cannot safely predict that the best pullet will produce the best chicks. I have no doubt that any of the readers of this article can call to mind a family of good looking girls, married and rearing families where one bunch of children will average very much better looking than those belonging to the other sisters, and yet the parents of this handsome lot of children are no better looking than the other parents. Why is it? Is it because the two bloods "nicked" well, as the poultry breeders express it?

I want to emphasize the fact that a direct crossing of new blood is always a throw in the dark. You may get satisfactory results, but the probabilities are always on the side of disappointment.

Any one who has bred poultry for a decade or two has met with disappointments, by buying high priced, high scoring, prize winners, and failing to raise a chick of any merit from them. Why was it? This is not a world of chance, but a world of cause and effect. The grand parents could no doubt have shown you the reason.

Most breeders, even those who follow inbreeding, have several lines of blood or

families in their yards. Suppose you visit such a breeder and select his highest scoring pair of different blood. You may, but the chances are all against your raising chicks that are equal to the pair you bought. If the bloods happen to "nick" well you will be all right. If not, breed back on both sides the next season, and also select a new mating for each. Then adopt your strain or family blood the mating that has given you the best results, provided the results are such as you want to perpetuate. The wisest plan would be to sell out and begin again on a right basis.

Mr. Hodges quotes: "Whatsoever a man soweth that he must also reap." Yes, that is true, and it is equally true that he must also reap what someone else has been sowing, when he crosses new blood on his flock; and more especially will it be found true if he follows Mr. Hodges theory with which he closes his article: "When I wish to buy stock, I desire to know what this stock is individually rather than what strain or how long they have been line bred."

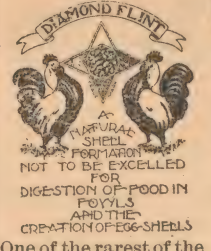
Emerson said that the time to begin the education of a boy was one hundred years before his birth. If all of the parents and grand parents of birds I am mating are such as I want to reproduce, I do not worry about results.

I had my first lesson in inbreeding the first or second year of my experience with Standard bred fowls. Several neighbors were endeavoring to excel each other in Partridge Cochins, when I stepped to the front by buying the first prize pair at the state show. Another purchased a fine pullet from an eastern breeder and mated her with a good cockerel from an Iowa breeder. Within ten days after her arrival this pullet layed seven eggs and wanted to set. I bought the eggs and hatched five chicks. Four of those chicks were prize winners. Two of them better than the hen. He kept that hen three years, but while she was prolific, he never got one chick from her that would do to exhibit. He was a man. I was a boy. We discussed the matter many times, but could not agree. I concluded that those first seven eggs were fertilized by a male of the same family, and while I knew that inbreeding was not allowed in the human family, I concluded that one must to produce prize chickens, keep up a preponderance of family blood, and that has been and always shall be my aim.

The object of having a strain or family of your own is to secure thereby a uniformity of excellence. You will find that you will have very few culls after a few years of judicious inbreeding. Keeping one family blood always in control is the only way to secure a flock of even quality.

If you will carefully note the directions laid down by different writers for breeding up a strain of your own, you will see that you are advised to start with a pair of birds not related and then following down the two lines of blood. This plan followed out will give you two distinct strains. I have never been able to figure out theoretically or in practice why this is necessary, unless you are handling a variety of fowls that will not produce good pullets and cockerels from the same pair. If there are such fowls I would not grow them. To begin with you lose a year's time. Then you are running the risk of the two bloods not being congenial, in which case you should begin over to avoid losing more time. By following directions at close of this article you gain one year, and by making a side cross with two or three non-related birds, you have added to your chances of getting new blood that "nicks" well with your foundation blood. It will be better to inbreed than use even one fourth new blood that you have found uncongenial. You will have no trouble if you will always avoid new blood that has not "nicked" well in the first cross; and if you arrange your breeding pens so they will produce chicks that are not less than three-fourths or more than seven-eighths of the foundation family blood.

I would not buy a high priced bird from a man who did not keep a pedigree of his chicks.



Many breeders make a serious mistake and hamper their future operations by not being able to tell the dam of their best chicks. I have run across two such cases within a month. In talking with a well-known White Wyandotte breeder, he described a cockerel that has won several prizes and received a very high score. No doubt one of the very best in the country. It really made me feel bad when I found that the breeder does not know what hen he is from. She may have been sold at a low price, and yet she is easily worth one hundred dollars to that breeder for this season's matings. In case he knew the hen I would advise him to first, through February and March, mate her the same as last year. Then during April and May mate her with the cockerel. Another case. I recently saw a Buff Cochin cockerel that is a wonder. He was hatched too late to exhibit at the winter shows. The owner simply knows what pen that bird is from. Most of the hens from that pen have been sold.

It is too bad for the breeders to lose such opportunities. The great majority of poultry breeders only keep track of the pens their chicks came from, and many of them do not even do that.

If a breeder is anxious to grow a flock of high grade birds of uniform quality, he will advance faster by raising only twenty cocks a year and know their pedigree than he will by growing five times as many on the hit or miss plan.

My advice to a beginner is not to start in to establish a strain of his own. Get some pedigreed birds from a breeder who has, and will sell the quality of stock you want. If properly mated you will get good results. Then get the new blood you want from that same breeder as it becomes necessary. If you want to do otherwise either buy a fine cockerel and his dam and breed them together. In either case buy also one or two good pullets not related. Keep a careful pedigree of each chick. Plan your future matings so your chicks will have about three-fourths of the family blood of the pair.

If you produce something exceptionally fine, do not sell it at any price, but breed it back so you may perpetuate it. If the finest chicks are from one of the pullets not related to the male you used, breed back both ways and start a new family blood. But in case you do this do not abandon your first family line until you demonstrate that the new blood is better. You will find that your success will come from the preponderance of one family blood. Keep experimenting, but let it be a side issue. Your experience will come from the pleasures and disappointments of your experiments. Remember that every time you introduce a direct cross of new blood it is wholly an experiment. You can not count on it in advance.—W. H. Harrison, Jr., in Western Poultry Journal.

One of the rarest of the Rare Deposits yet found in the bowels of the Earth.

DIAMOND FLINT. Nature's blending of Grit, Lime and Phosphoric Acid, not to be excelled for Digestion of Food in Fowls and the creation of egg shells, adding vigor to the strongest of your flock.

Scientists claim this deposit to have been formed more than 5,000 years ago, and it is recognized by them and the natives, who have been using it for more than 100 years for their Poultry, as one of the most valuable products of the earth yet discovered for any and all kinds of fowls—Second in Hardness to Diamonds Only, hence the name "DIAMOND FLINT," tho formed of a heterogeneous mass of shell-fish and shells from which a milky substance flows when first exposed to the air. Does away with all need of oyster shells. Instead of buying a ton of oyster shells and a ton of ordinary poultry grit, order a ton of DIAMOND FLINT and you have all the properties to be obtained in both the others, and many other beneficial qualities not contained in either, at a great saving of time, labor and money.

Black Minorcas at Philadelphia, Pa.

Editor American Fancier: The Black Minorca alley at the coming Philadelphia show promises to break the record so far as entries go. Members from Iowa, Missouri, Illinois, Michigan, Ohio, Pennsylvania, New Jersey, New York, Vermont, Connecticut, Massachusetts, Maryland, District of Columbia, Virginia and North Carolina, have signified their intention of sending entries. In the way of specials in addition to the cash given by the Philadelphia management (which they promise to be very liberal with) the following have been offered, with many to hear from:

Wm. J. Boyd, Glennville, Ohio, $5 cash for best cock, hen, cockerel and pullet, bred, owned and exhibited by Club members.

Charles L. Blanton, Falls Church, Va., $5 cash for second best cock, hen, cockerel and pullet, bred, owned and exhibited by Club member.

Mrs. George E. Monroe, Dryden, N. Y., $5 cash for four best pullets, bred, owned and exhibited by Club member, pullets in pen eligible to compete.

H. W. Billard, Brooklyn, N. Y., $10 cup for heaviest cock and hen (not disqualified) open to all exhibitors.

Joseph P. Hilldorfer, Allegheny, Pa., fine silver trophy cup for best cock, hen, cockerel and pullet owned by exhibitor, open to all exhibitors.

Miss Marie Hilldorfer, Allegheny, Pa., setting Buff Cochin Bantam eggs valued at $5 for best Black Minorca pen. Eggs from first pen at Boston.

R. C. Nichols, Bernardsville, N. J., silver cup for Club member winning most points.

W. G. Ruckenbrod, Burlington, Iowa, membership fee and dues for one year to lady making first entry at the Philadelphia show in Black Minorca class.

Rowland Story, Brooklyn, N. Y., $2 cash for third cock, $2 cash for fourth cock, $1 cash for fifth cock.

R. F. Palmer, Akron, Ohio, $2 cash for third hen, $2 cash for fourth hen, $1 cash for fifth hen.

S. Champion, Cass City, Michigan, silver cup for best hen, bred, owned and exhibited by Club member.

A. Trethaway, Wilkesbarre, Pa., $2 50 in gold for best male and $2.50 in gold for best female, Anthracite strain, donor not to compete.

H. L. Coe, Springfield, Mass., $1 cash for best shaped female, bred, owned and exhibited by Club member.

F. Schroeder, Newark, N. J., $5 cash for member of Club winning most points.

George H. Northup, Raceville, N. Y., silver cup valued at $15 for best cock, hen, cockerel and pullet, S. C. B. Minorcas, exhibited by any Minorca breeder who has not exhibited at a Minorca Club meeting before. One silver cup valued at $15 for best cock, hen, cockerel, pullet and pen, Rose or Single Comb Black Minorcas, exhibited by any Minorca breeder.

Klee Brothers, Blauvelt, N. Y., $1 cash for best male, $1 cash for best colored male, $1 cash for best colored female.

George E. Howard & Co., The Feather, Washington, D. C., one inch ad for one year to Club member winning most points.

R. L. Simmons, Hillsboro, N. C., editor of Tar Heel Poultryman, $1 cash for best cockerel; one inch ad 12 months, value $6, for best cock; one inch ad 12 months for best hen; one inch ad 12 months for best pullet and three inch ad for four months for best pen, all for North Carolina exhibitors; also 12 subscriptions to Tar Heel Poultryman to be placed later.

Sec'y-Treas.

Falls Church, Virginia.

GILBERT'S NEW PIGEON BOOK.—The latest and best book devoted to pigeons. Thoroughly American and up-to-date. The author, Major F. M. Gilbert, is world famous. Handsomely bound in cloth. Price $1.00. Free to all sending us two new subscribers.

Story's Minorca Stock.

Story's chicks are all the go,
Winning "prizes" at every show;
All are saying, "They are very fine,"
He takes the lead in the "Minorca" line.

His eggs are the very best,
At the shows they stood the test;
All "O. K." and very nice,
Cheap, almost, at any price.

At his hennery, there you'll find
Cockerels, pullets, of this kind;
Some for sale, send your bill,
And your "order" he will fill.

When some you get you'll want more,
Send on your "order" now, before
They're all sold out, and then you lose
A lucky chance, so don't refuse.

At the shows in every town
His cocks and hens win renown;
Prizes won by the score,
Some yet to come, yea, many more.

In poultry papers his ad. you'll see;
Try an "order" and you will agree
That bargain better you never made
In all your dealings in the "poultry" trade.

When order's filled you'll send another
And tell the news to your "poultry" brother;
Hunt his address, you'll see it plain,
Then you can share in Story's fame.

In the classified ads. you'll find his name,
Rowland Story, of "Minorca" fame;
Send *at once*, before too late,
And yours will be a lucky fate.

ANON.

Muzzled Ducks En Route.

A baggage man on the Santa Fe who runs into Kansas City from out in the western part of Kansas has lost lots of sleep. It is doubtful if he ever can catch up with it. He leaves Hutchinson at night and reaches Kansas City in the morning. Nearly every night he brings in his car two or three coops of live domestic ducks. During the night, when he has no baggage to deliver at small stations, it has been his habit and privilege to lie down on an improvised couch and doze. With the advent of the ducks the dozing stopped. The constant quacking of the ducks, who could not understand their strange environment, would not permit of sleep.

For many nights as he lay awake he planned relief. He thought of strangling the ducks or chloroforming them. But neither expedient seemed good. One night a bright idea came to him. After he had put it into execution the ducks were silent.

The next night he had two coops of unusually vociferous ducks. As soon as it came time to sleep he wrenched a slat from one of the coops, reached in and pulled out a duck. From his pocket he took a small rubber band, which he slipped over the duck's bill just back of the nostrils. The duck tried to quack, but the rubber band, while it stretched a little, would not permit the duck to open its bill far enough to use its tongue. Only a murmur came from it. One by one the ducks were muzzled and the baggage man rested comfortably.

The commission men were surprised next morning when they received a lot of ducks with rubber bands around their bills, and when the bands were removed the shouts of protest from the ducks were deafening.—Kansas City Star.

THE JUNE AMERICAN BOY.

The American Boy for June (Sprague Publishing Co., Detroit, Mich.) presents 32 pages of matter of surpassing interest to boys. There are nearly 100 illustrations. This number leads off with an illustrated editorial, entitled "Your Country Wants You," addressed to boys who are this month being graduated from the schools. The stories are: "Timmie O'Flanigan 'Number 20,'" "Mam'selle La Belle," "Captain Jack Brier's Triumph," "Phil Kearny's Bugler," "Lafe, the Simpleton," "Three Boys in the Mountains," "Gallant John Pelham, the Boy Artillerist," "The Boy

Who Won a Laurel Crown," and "That Larkin Boy." Other items appear under the following titles: Beginning to Save. How to Learn Drawing, How Boys Make Money, New Games for Boys, The Daily Life of a West Point Boy, Starting an Amateur Paper, Boys' Exchange, June in American History, The Agassiz Association of Young Naturalists, Boys in the Home, Church, School, etc., Boys and Animals, and the Boy Stamp and Coin Collector, etc., $1.00 a year. Sprague Publishing Company, Detroit, Mich.

Crooked Breast Bones.

What is the cause and what is the remedy? These were the questions I was asked recently by a man who has kept fowls for some time, but who cannot breed all his chickens with straight breasts. In a few words, the cause is wrong feeding; the remedy proper diet. But let us look fully into the subject. It is certain that some breeds are never crooked breasted and that others always are. Some fowls roost on the ground and their breasts are in the shape of the letter S; others will roost on a walking stick and their breasts will remain as straight as a line.

There are various theories abroad and, perhaps, one of the most common is that the complaint is hereditary. It is to a certain extent. As an experiment, I once shut up two crooked breasted hens and kept their produce separate. They were deprived of perches, being allowed always to sleep on the floor of the house, which was kept scrupulously clean and dry. One brood was artificially fed and forced; the other was placed near a wood and after the first month had to forage for itself. One lot was entirely crooked breasted; in the other not one with this defect could be found. The weak constitution in the one was fostered by a forcing diet; in the other it was strengthened by natural food.

It is not wise to look to crooked breasts and such deformities for the best health, so such birds should be kept solely for table eggs or fattened and killed for home use. They should not be bred from, unless their progeny can be run wild. I have never yet seen a wild bird with a crooked breast, and I think the reason is the growth of bone is more gradual than is the case with domesticated fowls. Too often it is the aim of the producer to get quick maturity with great size, and to this end chickens are highly fed. Nature is forced and overdone and there is undue growth of body.

As in human beings, so in birds; there is such a thing as undue growth, consequent on over-feeding, a too rapid increase of weight out of all proportion to the development of bone and muscle. Fast grown chickens are weak and often too heavy for their half-formed leg bones. This induces them to rest on their knuckles on the ground by day, but at night when perching their legs are not strong enough to hold them steadily on their perches, and they are obliged to allow their breasts to rest. The cartilaginous bone of the breast is susceptible of change, and if the rest be not soft this bone takes the form of the perch.

And that brings us to a second theory, a common one, too, viz., the shape of the perches. Some there are who consider that the width of perches used is an important factor in the cause of crooked breastbones, or perhaps more particularly indented ones. They tell us that when narrow or small round perches are used the trouble is more in evidence than when wide ones are utilized. But I have tried a large and flat perch on which the birds can rest without clasping, and I have found if the bones are weak that kind of perch is as injurious as a small round one. To my mind it is not so much the shape as the substance of the perch that does the damage.

In a wild state a fowl, as a rule, sleeps on the branch of a tree and on one that can be grasped with ease. Where are the flat perches in a state of nature? Force birds to roost out of doors and they will generally be found to roost where they can grip well. Visit a farmyard on a summer night and you will find the fowls prefer the iron bars of a shed in preference to the wooden beams, or the spokes of a wheel to the shafts of a cart. And why? Simply because it is natural for the foot of a fowl to grip when the leg is bent. All of us cannot keep fowls under natural conditions, so we should do the best we can, and what we can do is easy.

"Provide chickens with round perches and covered with woollen cloth; they must not, however, be thicker than they can grip with ease." The advice is not by any means new, for as far back as 1793 it was given in an account of breeding and rearing Game cocks that appeared in the Sporting Magazine. Turkey rearers are, perhaps, more particular about perches than anyone, and it is common to find cloth covered or straw covered rests where many turkeys are reared. But this question of perches is not so vitally important and the great thing is to feed the birds properly.

The only way to get big birds is to let the growth be slow, so that large frames may be built up before the birds become fleshy. Provide chickens with plenty of fresh green food, give them earthworms and other insects, make them exercise, and feed them chiefly on grain, such as a mixture of barley and oats and wheat. Allow them an occasional tonic of iron and a drink of lime water and you will produce strong boned, big bodied birds, with plenty of muscle, the very best breeders, and free from crooked breasts or any other such deformities. Get the bones well grown and they will carry any amount of flesh.—W. in Poultry, Eng.

Practical Poultry Raising.

Food, care and surrounding conditions are the factors that make any breed of poultry profitable. One man may think the one breed he keeps is superior to any other. In his hands no doubt it would prove so. Preference or a natural love for anything is a great influence toward success. Such conditions take from the labor all irksomeness and in a degree make everything done a labor of love. The man who is fond of live stock does not care for his stock simply because it is necessary to see that they are provided with food, water and shelter to exist. He feeds because he likes to see them partake of the food with relish; he enjoys knowing they are snugly sheltered from storms. It is the same with the "crank" poultryman. All the attention he devotes to his flocks of poultry is influenced more by his love for them than the dollars and cents he expects to make out of them. The farmer who is always declaring, "It don't pay to bother with hens," is generally correct, if we judge from his standpoint. There is no occupation that will succeed if managed in a slip-shod, half-hearted manner.

Because a dozen or so of hens are easily made to yield a great profit, too many persons at once conclude that all that is necessary to make a small fortune each year is simply a matter of greatly increasing the number of hens.

Another lamentable fact is that if there is a member of the family who has made several prominent failures in other occupations, he or she is thought just the one to start in the poultry business on a large scale. Notwithstanding the fact of never having had any experience in poultry raising, they are ready to make the venture—ready to make large investments at the very start. If there is good financial backing, they will say, "Oh, I'll make a success, for I'll hire a poultryman to take charge of it." When it comes to the necessary point, they are unwilling to secure the services of an expert, because they "won't pay such extravagant wages just for feeding and care of hens." So someone who doesn't know the requirements that bring success is employed. A season or two generally exterminates the venture, because they "had just awful luck." Their flocks "had all the diseases known to poultry, the incubators failed to do good work, lots of chicks died in the shells," etc. All these things really occurred, but every mishap had its cause, every neglect was followed by a natural sequence.

Poultry raising as a business, whether the object is eggs alone or a combination of eggs and poultry, can never become successful (profitable) without observing the same rules that govern success in any occupation. A dry goods business would never be undertaken by a man who did not know anything about it. A man of wealth or moderate means who knew nothing about it wouldn't care to invest in and take charge of a florist's business. The reason would be that through lack of experience and knowledge he would not know whether his employes were following successful lines or using the proper methods. Why, then, should people venture into poultry raising expecting success to follow incompetency and ignorance? The road to successful poultry culture is strewn with wrecks of over-zealous, inexperienced experimenters.

The business is comparatively easy to learn by ambitious, energetic persons, and it is this class alone that will gain marked success.

It is better to commence with 50 hens than 1,000, even if the aim is to go ahead on a large scale. It is safer to increase a flock on the premises rather than to depend on buying in considerable numbers here and there. The latter plan perhaps is quicker, but the dangers that might follow are many. Such a plan is very apt to introduce vermin and often contagious diseases.

In raising or keeping poultry in large numbers there are many conditions to meet that do not exist in the case of the small flock. Then the same factors that render the small flock profitable must be maintained with the large flock. In keeping large flocks it will be found that the "little things" which seem really insignificant are the important links in the chain of success.

1500 Incubator Chicks
FOR SALE WEEKLY.

Price $15 per 100 from my laying matings, see below. 32-p. Des. Cat. Free

BREEDERS, EXHIBITORS AND SHIPPERS OF

Line Bred (Since 1892) **Exhibition Stock. Line Bred** (Since 1888) **Laying Stock.**

WHITE LEGHORNS, WHITE ROCKS, BLACK MINORCAS, BARRED ROCKS, WHITE WYANDOTTES; LIGHT BRAHMAS.

EXHIBITION.

$3.00 for 12 Eggs.
$5.00 for 24 Eggs.
$15.00 per 100 Eggs.

The above are from my best matings. I mate no pens to produce prize Exhibition Cockerels and Pullets from same pens. Elegant descriptive catalogue free.

The Kind to Exhibit.

LAYERS.

$1.00 for 12 Eggs,
$8.00 per 100 Eggs.
$70.00 per 1,000 Eggs.

The above stock bred for years for egg production. Birds true to shape, color, markings, and of good size. Mated with the laying blood males, will surely produce.

The Kind to Lay Eggs.

MARKET.

$3.00 for 50 Eggs.
$5.00 per 100 Eggs.
$50.00 per 1,000 Eggs.

Above stock bred more especially for market, etc. Females off in size, shape, legs, comb, eye, tail, etc., mated with extra large males will produce right for broilers, etc.

The Kind to Market.

State Agent For The Star Incubator Company.

If you want to become thoroughly successful in poultry raising commence at the bottom of the ladder, and don't make your first venture at a dizzy height that poultrymen with years of experience have not yet attained.—G. O. Brown in Baltimore Sun.

PIGEONS.

Lofty Thoughts of the Editor

A neatly gotten up series of articles, called "The Pigeon," is just to hand, and to the novice as well as the old hand there are many pointers. There are short articles on all the prominent breeds, with a few words on their breeding, showing and care. Price, 25 cents. By A. V. Meersch, Poughkeepsie, N. Y. Many will remember Mr. Meersch as an attendant at the New York show some years ago. Since he has met with adversity and has lost the use of one side of his body by a shock, and as he is helpless except for very light work or writing, he has turned his pigeon knowledge to account in the form of the aforesaid articles.

—

Mr. Charles E. Lang, secretary of the Jacobin Club, writes that the rules and by-laws as framed by the committee appointed at the last meeting at New York are about ready for the printer, and that he would be glad to have a free and open discussion on them before finally adopting them. We shall have something to say later on.

—

Mr. George D. Eustis, secretary of the Pigmy Pouter Club, has packed up his belongings, including his pigeons, and is now located for the summer season at Jamestown, R. I., where all communications should be sent until the last of September.

—

The management of the Chicago show anticipating that, to be truly great, means work the year round for your show, are preparing matters for the next show that will place Chicago permanently in the van. A carefully prepared premium list, with the best judges and liberal premium money, is what counts when backed up with a corps of efficient officers.

—

Many are the remarks made as to how to support New York and Boston if they clash, but with the exception of a few large exhibitors who can show two teams they both are bound to suffer.

—

We hear that there are a large number of young Pigmies being turned out at Washington, D. C., and Baltimore. The Boston fanciers of the little fellow are not so fortunate. One breeder has four hens that have yet to lay this season.

—

Besides, the weather here in New England has at last got in its work in royal shape, as all are having young go off thick and fast, so that what promised to be a season with lots of early young will pan out the other way.

—

Canadian fanciers are anticipating a clash with our boys on this side at the Pan-American. From a correspondent in Toronto we hear there is going to be a few from there. We remember a big team being shown at Chicago in '93 by Mr. Donovan, many of which carried home a first, but we do not remember having seen a really strong team on this side since, though Mr. Wagner showed quite a few at Louisville, Ky., in '92 and also at Baltimore. Why not run a few over, boys? The hen men do and generally do their share of winning I notice, too.

—

Then there used to be some good birds owned in Montreal, which is only a night's run from Boston, yet I do not remember having ever seen a pigeon entry at the Boston show from that city.

BANKERS.

WELLS, FARGO & CO'S BANK, - - - - 63 Broadway, New York.

OFFER 200,000 SHARES TREASURY STOCK AT $3.00 PER SHARE.

THE CALIFORNIA KING GOLD MINE COMPANY owns 23 claims in Picacho Basin, four miles from the Colorado River, in California, and twenty miles by direct road from Yuma, Arizona. . . . . .

DEVELOPMENT work has been in progress for six years, and more than ten thousand feet of shafts, drifts levels and cuts have been completed and paid for.

Upwards of fifteen million tons of ore are now ready for the mill, all of which will be mined by open cuts at a nominal cost.

A CONTRACT has been entered into for the erection of a mill and cyanide plant capable of handling 1,000 tons of ore daily, which will be completed this year. The Directors guarantee that this plant will be placed in operation, regardless of the amount of treasury stock subscribed. The net profit after commencing work will exceed $60,000 a month, and probably reach $100,000 a month within a year. The ore in sight will supply such a plant for more than forty years, assuring an annual return of 20 per cent or more on the investment.

There is no promotion stock. No salaries to officers. Every dollar realized from the sale of stock, goes into the treasury to pay for the plant. Reports of J. Ralston Bell, London; William A. Farish, Denver; Emerson Gee, Denver; P.C. Du-Bois, Berkeley, Cal.; J. L. Shepherd, and others, all eminent mining engineers, strongly recommend this property.

This is an Opportunity to invest in a large Mining Property of known value, managed by experienced mining men in the Interest of stockholders

Application will be made for listing the stock on the Boston Stock Exchange. Prospectus and any information desired will be furnished on application. Subscriptions received by

The California King Gold Mines Co., 32 Broadway, N. Y. City. George F. Beakley, City Agt., Johnstown, - - - N. Y.

PET STOCK.

The Canary Bird 147 Years Ago.

Who can refuse their voice, when all things join
To fill the soul with harmony divine?

THE DESCRIPTION AND CHARACTER.

This bird has its name from an island of the Atlantic Sea, being one of those which the ancients, for the excellent temperature of the air, called Fortunate. All those islands which they so named are now called the Canaries, from whence these birds were first brought into Europe, and from no other place. They were first carried into Italy, then into several parts of France and Germany, etc., where they undertook the breeding of them, and bred them in abundance to great perfection. They for many years have supplied all Europe, part of Asia, Africa and America with these beautiful little creatures, and each of these countries have improved the brood, for what are there produced exceed the birds brought from their original native climate both in beauty and song, among which those bred in Scotland, England and Ireland are not inferior to the best, being of a more hardy nature, and better for breeding than those of most other countries and as good in song, being hardy, straight, uprightly bold birds, having as beautiful a plumage as the best of their kind in Europe. The cock canary hath an exceeding shrill sweet note, which at one breath will continue without intermission for a long time, rising higher and higher by degrees, and varying its notes with a fine musical inflexion of voice in a very pleasant and surprising manner. The sound is so sharp and quavering, when it stretches its little throat, as to deafen the ears of its hearers, and thereby become disagreeable to them.

THE DISTINGUISHING MARKS OF THE COCK AND HEN.

The forepart of the cock bird's head, throat, pinion of the wing and rump are of a brighter yellow than the hen. These marks will hold good, let the birds be of what sort they will. They also have a little yellow above the bills and under their throats, etc., of a strong deep yellow in the cock, of a much paler color in the hen. There is a difference likewise in their vents; if you blow up the feathers in both you may easily perceive the cock's to appear longer than the hens. Another mark is of his size. The biggest and longest bodied bird seldom fails of being a cock, especially if his gesture and carriage be sprightly and majestic, and if he often extends his neck and head with life and vigor, then you may depend upon its being a cock. Besides all this, you may know him by his fine singing, in which you can't well be deceived, for the hens do not sing at all, or so indifferently that it does not deserve the name of a song; and whenever the cock sings, if you observe his throat you will see it swell and play all the time he is warbling out his pretty notes. But let the hen sing, either well or ill, this motion is never observed in her throat. This one remark will be sufficient to direct you to choose a cock bird at all times, when you will find, for the generality, all the other marks to correspond likewise.

TO ORDER THEM IN BREEDING, ETC.

Canary birds that are kept tame will breed three or four times in the year. They usually begin in April and breed in May and June, sometimes in July and August. There are many people in England, as well as in France and other countries, that get good livelihoods by breeding canary birds; besides a great number of persons breed them only for pleasure. Whether for pleasure or profit, choose such birds for breeding as are strong, healthful, stout birds. If the cock or hen be small, match either the one or the other with a larger, as a small yellow sort with a very large mealy one, etc., which will strengthen the brood. Towards the middle of March, or sooner, begin to match your birds, putting one cock and one hen in a small cage, and when they have been so long together that they are perfectly reconciled and well pleased with each other, then towards the end of March or beginning of April put them into the breeding cage made for that purpose, and the larger it be the better, that the birds may have the more room to fly and exercise themselves. Let there be two boxes in the cage for the hen to build in, because she will sometimes hatch a second brood before the first are fit to fly, leaving the care of them to the cock to feed and bring up whilst she breeds in the other box. Therefore if she has not a spare box to build in she will be apt to build her nest on the top of the young and smother them, as it sometimes happens, or build so near that they will spoil one another. Whilst your birds are pairing feed them with soft meat—egg, bread, maw seed, and a little scalded rape seed. When they begin to carry stuff for building, give them once a day, or every other day at the farthest, a few green blades and a little coarse sugar, to cause a slipperiness in the body of the hen, that so the eggs may come forth without injuring the bird, for they often die laying their first egg. When they have young ones, give the same soft victuals fresh every day and let them have fresh greens likewise, such as cabbage or lettuce, but give them more constantly chickweed and groundsel with the seeds upon it, towards June shepherd's purse, in July and August plantain.

It is to be recommended to such persons as breed only a few birds for pleasure to use large cages, it being much the best way, that they may have room to fly, for exercise is good and they love it. Be sure you don't fail of giving them fresh greens and soft meat every morning for they cannot feed their young without it. Those that intend to breed a number should prepare a room for that purpose. Let the situation of it be such that the birds may enjoy the benefit of the morning sun, which is both delightful and nourishing. Let wire instead of glass be at the window, especially in the summer time, that they may have the advantage of the fresh air, which will add greatly to their health and make them thrive the better. Keep the floor of the room very clean, sometimes sifting fine dry gravel or sand upon it, and duly remove the dung and other foul stuff. You must take care to fix nest boxes and back cages in every convenient corner and place of the room at least twice the number that you have birds, that they may have the more variety to choose a lodging to their minds, for some love to build high and some low, some in a light place, and others will choose a dark place to build in. There ought to be two windows in the room, one at each end, and several perches at proper distances for the birds to settle upon as they fly backward and forward. You may set likewise a tree in some convenient place of the room. It will divert the birds and some of them will like to build in it. You must observe that their nest be secure from falling through, and if in danger, to tie the tree closer to prevent it, and they will hatch there as well as in any other place. Or you may, when the whin bushes are green and in flower (if they can be had) hang a few of them at proper distances in the room, which will do as well, being close and very proper for their building, and you will find them very ready to do so. Remember not to put too many birds together—eight or ten pairs are enough for any ordinary size of a room. When your birds are first paired as directed before, turn them into this room, where they will live a conjugal life, as it were, and, notwithstanding there are several male and female birds in the same room, one cock and one hen, as they first couple, will keep constant to each other, and both concur and assist in hatching and feeding their young, for the cock bird takes his turn at building the nest, sitting upon the eggs and feeding the young as well as the hen.

OF THEIR NEST AND HOW TO ORDER THE YOUNG.

You must furnish them with stuff for making their nest, such as fine hay, wool, cotton and elk's hair, if it can be got. Let all these materials be thoroughly dry, then mix and tie them up together in a net, or some such thing, that they may easily pull it out as they want it, and let it be hung in a proper place in the cage or room for that purpose. They build a pretty nest, about which they will sometimes be so industrious as to begin and finish it in one day. The hen lays commonly four or five eggs and sits thirteen or fourteen days. When the young are hatched, leave them to the care of the old birds to nurse and bring until they can fly and feed themselves. The hen by reason of her rankness, in being kept together with the cock and provided with all things necessary at hand, without any trouble in seeking their food, etc., will sometimes build and hatch again before the first brood can shift for themselves, the care of which she transfers to the cock, who will feed and nurse them himself, supplying the office of both parents. When this happens, or you think they have more young ones than they can bring up, you are to take care and feed the young two or three times a day till they are grown up and able to provide for themselves, which often prevents their being starved and makes them thrive and become very tame. If you have a mind to bring them up by hand, take them at ten or twelve days old, feed them as the linnets, etc. Soak rapeseed ten or twelve hours in clean water, then scum and strain it, bruise it very small, and clean as many of the hulls from it as you can, then take a piece of the best white bread, first soak it in clean water, then boil it in a little milk. Strain the milk from it till it be pretty thick, making but little at a time, that they may have it always fresh every day. When they begin to feed themselves take them from the old ones and cage them. Let their meat be the yolk of an egg hard boiled, with as much of the best white bread and a little scalded rape seed. When it is boiled soft bruise the seed fine and put a little maw seed among it, mix all together, and give them a sufficient quantity fresh every day. Besides this, give them a little scalded rape seed and a little rape and canary by itself. You may keep them on this diet till they have done moulting, then put them in separate cages, and afterwards feed them as you do the old ones, with two-thirds canary and one-third rape seed. You may give them a little hemp seed but not too much for it is a very bad seed. If you give them too much it will make them rotton, moult black and shorten their lives. But a little sometimes will enliven and cherish them. Keep them to this food, taking away their soft meat, unless at any time they are sick, then continue it.

OF THE CANARY BIRD'S DISEASES AND THEIR CURE.

Besides their moulting, which is common to all birds, they are subject to the following disorders: The first is a surfeit occasioned either by a violent cold, or from eating too greedily upon greens, especially on a rank sort of chickweed, with broad leaves and without seeds, which is hurtful to both old and young birds, it being very apt to surfeit them. To discover when the bird has this distemper, blow up the feathers on the belly and you will perceive it swelled, transparent, full of little red veins, all its little bowels sinking down to the extreme parts of the body, and, if far gone, black, which generally brings death. The cure of this disease, if taken in time, is to keep it warm, and give it whole oatmeal amongst its seed for three or four days, in order to cleanse it, and put liquorice in its water, but if it is too loose, instead of oatmeal give it maw and bruised hemp seed, being more binding, and at the same time let it have a little saffron in its water, or you may give it milk and bread with a little maw seed in it. 'Tis very good for the bird at such a time. Or you may take millet, hemp, maw, rape and canary seeds, of each as much as will lie on a sixpence. Let these just boil up, rinse them in cold water to cool them, then boil a new laid egg hard, mince it small, both yolk and white together, take about a quarter of it and put to the seeds, and add as much more lettuce seed as any other. Give this meat to the sick bird, it has a good effect on many. But before you give it this, in the morning early let your bird drink two or three times water in which you have put about the quantity of two drops of treacle, and when you have observed it to drink two or three times, take it away, and give it clear water again. Repeat this three or four mornings before you give it the above composition.

Another disease the canary bird is troubled with is a little pimple on his rump, called the pip. It will generally go away of itself, but if at any time it is bad and will not go away of itself when it is ripe, let out the putrid matter with the point of a fine needle, squeeze it all out with as much gentleness as you can, after which, a bit of loaf sugar moistened in the mouth being put on the sore will heal it.

A third disease is a kind of yellow scab that come about their head and eyes, which sometimes swell and are full of matter. Anoint these places with fresh butter, lard, or the oil of sweet almonds. Those things will cure it unless it spread, then nothing but time and cooling food will carry it off.

The last thing I shall take notice of is the moulting. You may know when this comes by the bird appearing rough, melancholy, and often sleeping in the day with his head under his wing and the cage covered with down and small feathers, and the second, their tail and wing feathers. Careful nursing is the principal means to preserve birds under this natural malady, therefore be sure to keep them warm. Set them sometimes in the sun, when it shines powerfully, to bask themselves; it will comfort them very much, at the same time taking care to keep them from cold and wind, which are very prejudicial to them at such a time. Let them have good nourishing food, bread and egg mixed together, and put saffron in their water, likewise bruised hemp seed, with lettuce and maw seed. If the weather is very hot when the birds are in their moult, give them liquorice in their water instead of saffron, and in their meat plantain and lettuce seed, but none of that meat if it be cold weather. Remember, whenever egg is prescribed for any sick bird it is to be boiled and chopped or grated very fine, hemp seed ground or bruised, and rape or canary seed scalded and bruised. These things, with good attendance, will at all times contribute very much to the relief of the sick birds.

ON THE CANARY BIRD.

Delightful, airy, skipping thing,
To charm by nature taught,
How cans't thou thus imprisoned sing
And swell thy downy throat?

Divine would be the poet's lay
Breathed with that melting air
With which thy warbling voice repays
Thy bounteous feeder's care.

Had but those forests Orpheus drew
Clos'd in their shades a bird
Of equal harmony with you
No tree of taste had stirr'd.

The groves had listen'd to thy tongue,
Of their own feather'd choir,
Nor on the vocal strings had hung,
But on their boughs the lyre.

—J. Millar in Fanciers' Review, Scotland

THE AMERICAN STANDARD OF PERFECTION.—Describes all recognized breeds of fowls. Indispensable to every breeder and fancier of thoroughbred chickens, ducks, turkeys and geese. Latest 1899 revised edition. Price, one dollar. Free to anyone sending us two yearly subscribers at one dollar each.

The Flemish Giant.

Editor American Fancier: The Belgian Hare boom is causing a great interest in rabbit breeding. Its force is reacting favorably upon all breeds, but more favorably upon the Flemish Giant than upon any other one breed. This is natural, because the Flemish Giant is the nearest relative of the Belgian Hare, having sprung from the same stock

[Continued on Page 12.]

...A GILT EDGED INVESTMENT....

SOVEREIGN OIL COMPANY

OF SAN FRANCISCO, CAL.

....OPERATING IN THE WORLD-FAMED KERN RIVER OIL DISTRICT....

YOU WHO HAVE MONEY TO INVEST SHOULD LOOK UP THIS PROPOSITION BEFORE PLACING YOUR MONEY ELSEWHERE.

and having diverged from the Belgian through the results of selection.

For market purposes the Flemish Giant is the one breed most worthy of consideration. It has the same quality of flesh as the Belgian and a much greater quantity. While the Belgian Hare has difficulty in reaching the weight of eight pounds, the Flemish Giant easily attains the weight of twelve pounds. The writer knows of one Flemish Giant buck in this country which has weighed nineteen and one-half pounds and his owner expects him to reach an even twenty pounds. He knows of one doe which has weighed thirteen and one-half pounds and there are perhaps others even heavier than this.

The pelts of the Flemish Giant must therefore be of greater value than those of the Belgian Hare, because of their greater size. One Flemish Giant pelt is easily worth as much as two pelts of the Belgian Hare, and as it is possible that these pelts may have an increased use and therefore an increased value, this fact is worth taking into consideration.

It hardly needs to be said that it will take no more time to attend to a Flemish Giant than to attend to a Belgian Hare. In other words, in raising rabbits for market, the amount to be charged for labor per pound of meat raised will be from one-half to three-quarters as much for Flemish Giants as for Belgian Hares. And as the labor bill will be considerable where rabbit raising is conducted upon a large scale, the saving thus made is a matter that cannot be ignored.

From these three considerations there seems to be no reason to doubt that for market purposes the Flemish Giant is the rabbit which deserves the greatest consideration of any breed thus far produced.

For fancy purposes, that is, for exhibition, and breeding for the production of ornamental characteristics, the Flemish Giant deserves more consideration than it has thus far received. The standard for this breed calls for great size, not less than twelve pounds at maturity; for a large, shapely head; for erect ears, about six inches in length; for large, dark brown, expressive eyes; for a broad and massive breast; for straight and heavy boned fore legs and strong, heavy boned hind legs; for a long and broad back; for wide and massive haunches; for a rather large and evenly carried dewlap in the does; and for color that is dark grey, free from sandiness, with even black ticking, the belly to be as free from white as possible and the under side of the tail white. Here are points enough to make the proper breeding of this animal a study for the fancier and the successful production of a first-class specimen something to be proud of. The one who expects to breed Flemish Giants for exhibition by taking into consideration weight alone will find that he is badly off the track. Size alone, under a proper system of judging, will not and ought not to win, although it is and always must be an important point. It is the all around animal, the one which combines size, shape and color, that deserves success in the show pen.

Color is a matter of taste. Doubtless there are many people who will always prefer the variety of coloring upon the Belgian Hare to that upon the Flemish Giant. But there are assuredly some who deem the dark grey of the Flemish Giant, with its even black ticking, as handsome as, if not handsomer than, the rufus red of the Belgian. I have had visitors at my rabbitry who have declared to me that they thought the Flemish Giants of a handsomer color than the Belgian Hares. Both are handsome and every one should consult his own taste upon such matters. No one yet has been able to lay down a canon of beauty that is accepted by all.

Like the Belgian, now that the Flemish Giant has become popular, this rabbit is beginning to vary in color. Red and Black Giants are beginning to appear, so that in time we may expect as many varieties of the Flemish Giant as we have of the Belgian Hare. This gives an additional interest to the Flemish Giant and will serve to make this rabbit more popular than it now is. A good Black Flemish Giant ought to prove a very popular rabbit, and not only a popular but a very profitable one, because of the increased value of the pelt. We think there is little doubt that such a variety will be produced, because we have heard of so-called sports of this color and because the production is feasible through judicious crossing. In a few years, at the most, we expect to hear of fairly well-established strains of the Black.

In view, then, of the practical and ornamental qualities of the Flemish Giant, of its value to the practical man and its adaptability to the fancier, we confidently expect this breed to take a high place in the estimation of the public, to become widely and deservedly popular, and to rank very nearly at the head of the different breeds of rabbits. We see no good reason why this should not be so and we see, or think we see, a number of reasons why such a result should follow. Unless we misread the signs, the Flemish Giant has a bright future before it.

die by being louey than from any other cause. You can talk about improper care and food, lack of green food and grit, but, when looking for the root of the trouble look for lice, and when you find them look into the merits of Lambert's Death to Lice Remedies. Rev. H. H. Purrington, Mt. Vernon, Maine, writes: "We all use Death to Lice and find it most satisfactory." The Norto n Poultry Yards, Dallas, Texas, writes: "We have been using your Death to Lice for the past four years and it has given entire satisfaction."

MORE CHICKENS

have head lice than most poultry keepers realize. Some think that these little pests are pin feathers on the top of a chicks' head and do not take the trouble to examine them closely until the broods begin to die off. One Massachusetts fancier says that it cost him hundreds of dollars to learn this. Death to Lice Ointment is made especially for the extermination of these little blood suckers, without injury to the little chicks. 100 doses 10c postpaid.

MORE CHICKENS

than should go into two coops are often crowded into one. The lice will then crowd into these small quarters and assist to make the nights long, hot and miserable. The little mites or spider lice crawl out of the cracks and crevices and extract more blood from the chicks than they can make during the day. Charles L. Evans, Wood River, Neb., writes: "I have given your 'special' a thorough trial. I had a hen-house that was polluted with mites. I mixed one (four) ounce box of special to one gallon of whitewash and gave it a thorough whitewashing. I now defy anyone to find a louse about my hen house."

MORE CHICKENS

properly cared for mean more money. Proper care means a liberal use of Lambert's Death to Lice Remedies as well as suitable food and housing. No poultry keeper ever failed because he put too much money into Death to Lice. Many do fail because they do not keep their flocks free from vermin. The most successful money-making poulterers are those who use the most Lamberts. We have remedies for all kinds of lice, on anything and everything. We put it up in all sizes of packages to suit all kinds of people. We have all kinds of good testimonials as to its efficacy.

PRICE LIST.

Death to Lice Powder 10 and 40 cents by mail. Large sizes 50c and $1, by express from here or nearest agency. Death to Lice Ointment, 10c and 25c by mail. Death to Lice Special, 10c and 40c by mail. Samples of one each of the above 10c sizes at one time 25c. Death to Lice Liquid, 1 qt, 35c; 3 qt, 60c; 4 qt, $1, from here or from nearest distributing point. A 64 page illustrated book mailed free. D. J. LAMBERT, box 248, Apponaug, R. I. 73-24

WHAT SAVED JUDGE CLARK'S CHICKENS.

Scotch Plains, N. J., Sept. 13, 1900—Judge Clark, when not dispensing law and dealing out justice, devotes a great deal of his time to raising chickens and ducks. About two weeks ago his fowls were attacked with a disease which began carrying them off at an alarming rate, notwithstanding all his efforts to check the epidemic. Several authorities on chickens were consulted and it was agreed that the fowls were suffering from some form of cholera. A remedy was at last found to check the disease. This was procured from the Star Incubator Co., of Bound Brook, and it proved to be just the thing, and the Judge is once more happy and will begin at once to replenish his stock.

"RINGLETS" SOAR STILL HIGHER.

AT THE IMPERIAL SHOW OF THE NATION—
MADISON SQUARE GARDEN, N, Y., THE WORLD'S RECORD OF

E. B. THOMPSON'S BARRED PLYMOUTH ROCKS

4 YEARS IN SUCCESSION was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ever accomplished in the annals of the **New York Show; Winning** during **4 years in succession MORE THAN THREE TIMES AS MANY 1ST PRIZES** as any other exhibitor, and as many **1ST PRIZES** as **ALL COMPETITORS COMBINED,** besides more **than twice as many Cups** and **Specials** as all, including the **superb challenge Trophy,** value **$100,** for best cock, cockerel, hen, pullet and exhibition pen; **$100 Sterling Silver Cup** for finest exhibit, **Grand Special Prize Sweepstakes Cup** value **$100** presented by the **President** for best P. Rock cock, cockerel, hen and pullet, any variety. My clean sweep of

FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES

on pullets has never been approached in Madison Square Garden, and stands alone and unequaled.

The world's record of 1st on exhibition pen at New York 3 years in succession is the undisputed Champion. With their 1900 record the **"RINGLETS"** have won at New York a grand total of **77 PRIZES, 31** of these prizes are 1st and specials, being 17 more 1st and special prizes than won by any competitor in the history of the show. Rare bargains in yearling breeders in lots of a trio or 100. Show bird fit to win in the fastest company. Richly illustrated 24 page catalogue on application. Elegant breeders in any number. Eggs from finest exhibition matings, 1 sitting, $5; 2 sittings, $9; 3 sittings, $12; 4 sittings, $15. ADDRESS 91-tf

E. B. THOMPSON, Amenia, Dutchess County, New York.

Small Poultry Plant Sacrificed

Owing to a change of residence, I am obliged to sell my poultry plant—buildings, appliances and stock. My B. P. Rocks are E. B. Thompson and Gardner; the W. Wyandottes, Duston; W. P. Rocks, Fishel and Huyler. I have spared neither trouble or expense to improve my stock, and have some fine birds.....

Stock:

Barred P. Rocks. One yearling cock (Gardner) son of my cockerel breeder (2d prize winner at 1901 New Jersey State show.) One two year cock (Thompson) pullet breeder, 24 hens, mostly yearlings.

W. P. Rocks. One yearling cock (Fishel); one yearling hen and two yearling hens (Fishel); one hen 1st prize pullet at New Jersey State show 1900 (Huyler); three yearling hens (Fishers Island.)

White Wyandottes. One yearling cock (Duston), four yearling hens (Duston). About 75 to 100 chicks (3 breeds) from 7 weeks to 3 months old (July 1st).

Appliances. Wilson green bone cutter, used three years; 120 egg Cyphers Incubator, used three seasons; one Peep o' Day Brooder (with covered run), used three seasons; one $5 Champion Brooder, used two seasons; drinking fountains, roosting and brood coops, etc.

Building, including roosting houses, scratching sheds and feed house (about 60x8 feet, made of hemlock boards, lined inside. Neponset paper, roof covered with Neponset paper and painted—part of building, 2 years 8 months and part 1 year and 8 months old, wire runs, etc. Anyone living in or near Elizabeth could use this house to advantage.

I would prefer a purchaser who could take all (or nearly all) of stock and appliances, and who could come to Elizabeth and superintend shipping and packing. I don't want the bother. To such a customer I offer a bargain. As I am obliged to move soon this stock and property must be sold. Fowls and property can be seen at address given below. This is an opportunity for a quick buyer. 08-09

GEO. H. STAHL, Quincy, Ill.

Now is the Time you want Eggs

By feeding your fowls a little

BANNER EGG FOOD AND TONIC

your hens will lay lots of eggs, and you can double your profits, as this is the season of the year when fresh laid eggs are scarce.

REMEMBER, this TONIC does not force your hens to lay; it only brings them up to the pink of condition which is necessary for egg production.

TO THOSE who have never used it, we simply ask you to give it a trial, and be convinced.

PRICES: 1 lb. can, 25cts, by mail, 40 cts; 5 cans $1 on board Ex. at New York. 78-tf

MUFFED TUMBLERS FOR SALE.

WINNERS IN ENGLAND AND AMERICA.

The grandest collection of winning Muffed Tumblers ever gotten together is now on sale, and can be seen by appointment and birds selected I will sell any Muffed Tumbler 1 own and arrangements can be made to take the entire lot. The varieties are Blue Saddles, Black Badges, Black Mottles (Yellow Rose cock, 1st Boston and Chicago, price $15, one of the best living) and several other odd birds, all winners or will produce winners. My Tumblers possess characteristics peculiarly their own, having been bred carefully for years, and are streets ahead of any other strain. In the past five years I have bred more winners than all others combined. Stock birds sold to others have bred their best birds; why, then, waste time and money by breeding from ordinary stock, when for an ordinary outlay the best birds living can be obtained? Those who would like to win and breed winners are invited to correspond. Prices very low, but nothing in muff legs under $5 per bird. (Some as low as $2.50 in surplus Clean Legs.) Testimonials from dozens who have purchased winners in all parts of the country. Satisfaction guaranteed. State wants fully. See winnings at Birmingham, Eng. (1st and medal), Boston, Chicago and New York. While winning here I had a team of six winning at Birmingham, Eng., the greatest Tumbler show in the world, irresistible argument as to the quality of my stock. 48tf

"Profitable Poultry Keeping in All its Branches."

This is the title of the new and elegant Catalogue issued by the Cyphers Incubator Co., for 1901. It contains 224 pages, 8x11 inches in size, over 200 fine new half-tone illustrations and a wealth of interesting, down-to-date matter, covering the subject of **Poultry for Profit** in all its branches.

This is a Brand New Book,

not a re-hash of old ones. Contains special articles written by experts, and illustrates and describes over fifty of America's largest and most successful Duck, Broiler, Roaster and Egg Farms. It also contains the endorsements of over one hundred of the foremost breeders of this country—men and women who are using the **Cyphers Incubators**—and shows photographic views of many of their poultry plant: and favorite poultry houses. Ask for Book No. 9 enclosing 10c in stamps, and address nearest office.

TYPOGRAPHICAL UNION LABEL FULTON COUNTY No. 258

SATURDAY JUNE 29 1901

From the Editor's Perch.

The Prize List of the New York State Fair for 1901 is a vast improvement over previous ones. It is really well printed and embellished with an artistic cover. The classification in the poultry department for the first time in the history of this fair is up-to date and complete which in no small measure is due to Commissioner Wieting and Secretary Shaver.

***

Our opinion is that the management made a serious mistake in exacting the latter. The entry fees favor exhibitors with large strings of birds and make the man who enters only one or two birds pay an exhorbitant fee for the privilege of exhibiting at the State Fair. The rule of charging 50 cents a bird entry fee minus all conditions and strings is a good one. It weeds out the trash and place every every exhibitor on the level.

***

Entries for the State Fair close August 10th. Judging commences Tuesday, September 10th, 9 A. M. Mr. John D. Jaquins, Watervliet, N. Y., is superintendent and should prove a very efficient officer as he has had experience in the show room before. Premiums lists can be obtained by addressing C. S. Shaver, Secretary, Albany, N. Y.

***

Bradley Bros., Lee, Mass., report the most successful season in hatching and raising Barred Plymouth Rocks they have had in years. Chickens have grown very fast and are strong and promising. But the Bradleys are past masters in the art of growing fine chickens.

***

Mr. W. J. Kinsley, Elizabeth, N. J., in another column of this issue advertises his entire flock of fowls and poultry buildings for sale. He writes: "Owing to the fact that I must change my residence I am obliged to dispose of my poultry and plant. I hope not to retire from the fancy permanently, only until I can get better located, but that will not be for a year or two yet." We hate to lose such a thoroughbred fancier as Mr. Kinsley, even temporarily, but believe it will not be long before he is in harness again. Mr. Kinsley certainly has spared no money to obtain the best blood in the fowl line in this country and the fortunate purchasers of his stock will no doubt find this out.

***

We are personally indebted to Mr. Kinsley for many courtesies. Being an editor himself (of the Penman's Art Journal) he took spare moments to furnish us with live newspaper clippings referring to subjects in which our readers are directly interested in. In other words Mr. Kinsley was an associate editor of the American Fancier.

***

Our esteemed English contemporary, the Stock-Keeper, editorially remarks:

"Apart from the Campine, the variety that appears to be going ahead in the most satisfactory manner is the Partridge Wyandotte, and breeders in all parts of the country tell us of a wonderful demand both for eggs and birds. Some of the big breeders say they cannot rear enough birds to supply their customers; and the demand does not come from England alone, but from Ireland, the far north of Scotland and all over the Continent. Fortunately, the Partridges have utility characteristics to fall back upon if their fancy charms do happen to pall, and we have heard more than one unbiased Wyandotte expert say the Partridges will be popular when the other varieties are forgotten. We hear good reports from several of the biggest Partridge breeders, and the competition will doubtless be particularly interesting at the forthcoming large shows."

The same can be said in a modified form, about Partridge Wyandottes in America. They are bound to be popular, their beauty alone carrying them to the front. As to the Campine, it is dead to the world as far as the American fancy is concerned.

***

The Stock-Keeper further remarks:

"Talking of Wyandottes, reminds us that we shall probably see this season the new variety being perfected by a well-known Wyandotte breeder. So far as originality is concerned the variety deserves success, for the great feature is the white lacing upon the black feathers. The effect is very striking, and we have no doubt when the birds come to be known there will be dissatisfaction in silver quarters, for the opposition will doubtless have an effect on the old variety. There is still another black-and-white breed to make its appearance this year, and time will show us what relationship exists between the Magpie and the Ancona. The latter breed has already given birth to a sub-variety, and the Rosecomb Ancona will be seen at several of the big shows this season. We have already had a good look at them, and find them satisfactory so far as the new characteristic is concerned. But whether the mere fact of putting a Rose Comb on a Single Combed breed entitles a new variety to popularity remains to be seen. Still a later production, which may not be seen this season, should prove of interest to Faverolle fanciers, though it is to be found in rural England, and not in rural France. There are whispers of other breeds and sub-varieties. In fact, every other breeder one meets has got some tale to tell of a new variety that will leave all the others in the cold. Soon the old cry, "the more the merrier," will not be applicable, for with the advent of a few more breeds we shall have to think seriously of founding an asylum for fuddled fanciers."

The new variety of Wyandotte referred to above i. e. with the reversed lacing of the Silvers was discussed many years ago by a number of fanciers in this country but no one seems to have been able to produce such a bird. If success has attended the efforts of an English fancier in producing a bird that has black feathers laced with white we believe he will find such a very profitable business and at the same time introduce a very handsome bird. But there is a limit to some of the so-called new varieties that differ only from old established sorts in comb or leg feathering perhaps.

***

Another very fair editorial in our English contemporary quoted above, we reproduce for the benefit of certain narrow-minded writers in this country simply to show them that the real English fancier is rather broad minded on matters that are of importance to the poultry world at large, regardless of geographical limitations. The Stock-Keeper says:

"We learn that the United States are now supplying us with an enormous quantity of chickens. Although the industry is as yet in an early stage of development, we understand that so great has been the call for these birds that one Chicago firm—Messrs. Swift & Co.—is already sending 150,000 dozen birds yearly to England, while the trade is rapidly increasing. We find that a Daily Mail representative called on Monday last at the Central and Leadenhall markets, where he was informed that the American chickens are doing well in England, and that these birds had not come to compete with the English products, but with the frozen Russian fowl, which are, it is stated, already finding a dangerous rival in the bird from the United States. The American chickens, we are told, come over of excellent quality, hence they are appreciated, and they are, moreover, packed in a very handy way for the purchaser. It has also been pointed out that the many advantages offered by the American railway companies for the conveyance of its live chickens from their homes in which they were bred to Chicago result in the birds reaching the killing depots in prime condition. When frozen they are packed in cases of only one dozen in each and sent to London right through. On the strength of the success of the American importations, it is now stated that great improvements are now about to be made in the feeding, selecting and packing of the Russian birds. There is nothing like competition, and although we should be sincerely glad if all the chickens required for our use could be bred in England, we know that it is impossible."

***

The largest and most complete catalogue of poultry supplies of every description ever issued is the new one of the Excelsior Wire and Poultry Supply Co., 26 and 28 Vesey street, New York City. It is a large book of 132 pages and nothing is omitted that is of value or interest to the poultry fancier, farmer, cattle breeder or country gentleman.

Adirondack Poultry Club Meeting.

By special invitation the Adirondack Poultry Club met at Fultonville, N. Y., Saturday evening, June 22, being the guests of Secretary H. S. Wemple and his brother, M. F. Wemple. Two big coaches drawn by fiery steeds carried the following members from Johnstown to Fultonville: Frank Randall, H. S. Wemple, L. A. Dorn, B. W. Mosher, J. H. Blunck, G. Souvay, G. Phetterplace, James Windsor, Eugene Riton, James S. Abbott, George Bradt, Thomas Parker, James M. Carroll, John C. Rice, W. J. Stahl, Edward Bartlett, Michael Timmons, H. J. Quilhot, J. H. Drevenstedt, M. F. Wemple, Dr. Chas. Walrad. The only incident of note on the trip was the exquisite driving of Lester Dorn. He handled his greys in masterly fashion and landed his "crowd" a winner by one hundred lengths.

After inspecting the extensive new plant of the Empire Cooping Company, recently erected by the Messrs. Wemple, the meeting was called to order by President Randall. The chief matter before the meeting was the refusal of the Fulton County Agricultural Society to meet with a committee appointed by the club for the purpose of protesting against the clause in the premium list of the above society, which makes it necessary to have four entries in a class to win first money. As agricultural societies get a pro rata share of premium money from the State, it seems rather a hardship to exact such a penalty, inasmuch as other societies in this State have removed all strings. The fact that the Adirondack Club was heartily in favor of the opening up of the poultry department at the fair to the world and had the intention of exerting its influence in bringing together a great fall exhibit, made the action of the officers of the agricultural society seem inexplicable. There are no gamer or more liberal fanciers than those that compose the Adirondack Club and no body of men will pull harder for a successful show than they. The coming winter show of the club was then discussed and arrangements perfected to make it the finest ever held in the city of Johnstown. The annual outing of the club was then announced to take place at Sacandaga Park July 6th.

After the meeting adjourned, a banquet was served at the Starin House, and after three hearty cheers for the Wemple Brothers, the members departed in their conveyances for their homes in Johnstown.

Pointers on Dogs.

Please to give us under the head of "Pointers" or any other place in the American Fancier the characteristics and instincts of the Newfoundland dog, of the St. Bernard and the Mastiff. A few years since almost everyone asked for the Newfoundland, but now we do not see it mentioned. How is it? Report says that the St. Bernard and Newfoundland are the same breed, the only difference being in the training. Some information will much oblige.

A. W.

Milnesville, Pa.

—

Answer.—In reply to the above, will say the Newfoundland, the St. Bernard,

and the English Mastiff are three distinct breeds and are different in disposition, color and formation. The Newfoundland is black or black and white in color, the solid black being preferable if as good in type. They are of large size, although not so large as a breed as the St. Bernard. Their coats should be flat, with no inclination to curl. They are very fond of water and take to it with no training. They cannot be termed an intelligent watch dog, as they are not capable of making distinction between a person of good character and intent or one that is malicious, and they have a bad temper, hence they are not popular and have been allowed to become almost extinct in this country. The St. Bernard is larger than the breed above mentioned, more massive in head and bone, and are of two kinds—the rough or long flat coat and the smooth or short coated sort. In color they are orange and white or orange brindle and white. He is a dog of very mild and loving disposition, suitable as a companion for ladies or children, which, taken as a breed, is about their only use. His great size may be of use as a "scare" to trespassers, but he has little inclination to guard, and if an occasional one has the gall to try and guard he lacks good judgment, like the Newfoundland, and is a bad subject to face. The Mastiff, bred by intelligent men for many generations as a guardian, is the best of all known breeds for the purpose. He is of gigantic size. In color, the different shades of brindle or fawn color, mostly of the latter, with black face shadings, and has a look about him that makes a stranger shudder, yet if left on guard he will never resort to force unless compelled to to protect property left to his trust. Will always warn an intruder to go no farther before he resorts to force, and if the warning is heeded he seems better pleased than to be compelled to use force, but there is no bribing him. If you insist, he will hold you; if you fight, he will "down you" and then hold you until help arrives, but will seldom tear and rend. A Mastiff has power and judgment, too, and he can tell an honest, trustworthy person from one with dishonorable traits on sight, regardless if the person has on rags or a full dress suit.

D. E. B. O'NAIR.

Josh Billings On Fowls.

"The Shanghi ruseter is a gentile and speaks in a forrin tung. He is built on piles like a Sandy Hill crane. If he had bin built with four legs he wud resemble the Peruvian lama. He is not a game animil, but quite often comes off secund best in a ruff and tumble fite; like the injuns that kant stand civilization and are fast disappearing.

"Tha roost on the ground, similar tew the mud turtle. Tha often go to sleep standing, and sometimes pitch over, and when they dew they enter the ground like a pickaxe.

"Thare food consis of korn in the ear.

"Tha crow like a jackass, troubled with bronskeeters. Tha will eat as much tu onst as a district skull master and ginerally sit down rite oph tew keep from tipping over.

"Tha are dredful unhandy tew cook; yu have tu bile one eend ov them tu a time; yu kant git them awl into a potash kittle tu onst.

"The femail ruster lays an eg as big as a kokernut and is sick for a week afterwards, and when she hatches out a litter of yung Shanghis she has tew brood them standing and kant kiver but three ov them—the rest stand round on the outside, like boys around a cirkus tent, gitting a peep under the kanvas whan ever tha kan.

"The man who fust brought the breed into the country ought to own them all and be obliged tew feed them on grasshoppers, caught bi hand.

"I never owned but one, and he got choked tu deth bi a kink in a clothes line, but not until he had swallered 18 feet ov it.

"Not enny Shanghi for me, if you pleze, I wud rather board a traveling kolporter; and as for eating one, give me a biled owl rare dun, or a turkee buzzard, roasted hole, and stuffed with a pair of injun-rubber boots, but not enny Shanghi for me, not a Shanghi! Speaking of hens leads me tew remark, in the fust place, that hens thus far are a suckcess. They are domestick and occasionally ate tuff. This iz owing tew their not being biled enuff in their younger days; but the hen ain't tew blame for this. Biled hen iz universally respekted.

Thare is a great deal ov originality tew the hen—exactly how mutch i kant tell, historians fight so mutch about it. Sum says Knower had hens in the ark and some says he didn't. So it goes which and tuther. I kant tell you which was born tust, the hen or the egg; sumtimes i think the egg waz—and sumtimes i think i don't know and i kant tell now which way iz right, for the life ov me. Laying eggs is the hen's best grip. A hen that kant lay eggs is laid out. One egg iz considered a fair day's work for a hen. I hav herd ov their doing better, but i don't want a hen of mine tew do it—it iz apt tew hurt their constitution and bye-laws, and thus impair their futer worth. The poet sez, beautifully:

Somebody has stolen our old blew hen!
I wish they'd let her bee;
She used tew lay two eggs a day,
And Sunday she'd lay 3.

This sounds trew enuff for poetry, but i will bet 75 thousand dollars that it never took place. The best time tew set a hen iz when the hen iz reddy. I kant tell you what the best breed is, but the shanghai iz the meanest. It kosts as mutch tew board one as it duz a stage hoss, and yu might as well undertake tew fat a fanning mill by running oats thru it. Thare aint no profit in keeping a hen for hiz eggs if he laze less than one a day.

Hens are very long lived if they don't contract the throt disseaze—there iz a great manny goes tew pot every year bi this melancholly disseaze. I kant tell exactly how tew pick out a good hen, but as a general thing the long-eared ones are kounted the best.

The one-legged ones, I kno, are the lest apt tew scratch up a garden.

Eggs packed in equal parts ov salt and lime water, with the other end down, will keep from 30 to 40 years if they are not disturbed.

Fresh beefstake is good for hens; i serpose 4 or 5 pounds a day would be awl a hen would need at fust along.

I shall be happy to advise with you at enny time on the hen question and take it in eggs.

Another Egg Laying Record.

Editor American Fancier: In the American Fancier for June 15 appeared the egg record of Mr. Wm. H. Hayward's Brown Leghorns. It is a good record, but since he asks who can beat it I will send mine. From March 8 to May 1 my pen of Rose Comb Buff Orpingtons averaged five eggs per hen for every six days. During the last fifteen days of April two pullets laid 29 eggs. Of cours, one of the pullets laid 15 eggs in the fifteen days. The fare has been of the simplest kind—free range, corn, water, and an occasional feed of table scraps with some ground meal. Who will presume now to claim that a large breed of fowls will not produce eggs equal to the small, so-called laying breeds? J. L. TORPIN.

Biggsville, Ills.

—Advertise in the American Fancier.

Feeding the Light Brahma for Eggs.

The question of feeding for eggs is one so often thrashed out in the poultry papers that one is apt to consider the subject fairly exhausted. So it might be were conditions in every case similar, but varying conditions demand different treatments, and in no matter is this more evident than in the intelligent feeding of poultry. To blindly lay down hard and fast rules for guidance in feeding flocks of fowl in winter is as devoid of reason as to make out a bill of fare to suit the circumstances of the sweltering South American native and of his fur clad Esquimaux cousin of the Polar regions. To properly formulate a bill of fare for fowls in winter to obtain the best results in the matter of eggs, the following conditions must be carefully considered: Amount of floor space for each bird, the age of the fowl, lightness and extent of daylight in the pen, whether the fowls are provided with a separate scratching pen, and the temperature of the pen both at the warmest part of the day and the coldest part of the night. These are conditions that must necessarily affect the feeding of all varieties of breeds, and all must be taken into account if the best returns are to be obtained.

There seems to be a growing inclination nowadays in favor of artificially heated poultry houses, and to the writer's mind this is not as it should be. In his opinion, these hothouse birds are lacking, to a great extent, in that hardiness to resist or throw off the germs of diseases to which fowls are exposed, and are more susceptible to disorders both of lung and liver than those housed in cooler quarters, and although not by any means an advocate of freezing pens for poultry, would never adopt artificial heating where the temperature can be kept up to 25 or 30 degrees by other means. Fowls properly fed and confined in clean, dry quarters seldom suffer from cold, so long as it comes in the form of steady frost; but draughts of even warm air are much more dangerous. So, in the first place, I would say, whether you keep Leghorns or Cochins, have your pens dry and clean and free from draughts and so protected that the temperature will never fall below 25 degrees, and your fowl will not complain of the lack of a stove, with its accompanying changes of temperature, so favorable to colds and kindred troubles.

As the subject of this letter was to be the feeding of Brahmas for eggs, I will leave the matter of condition of pens, accommodations, etc., and proceed to explain how with our own birds we get our best returns in winter eggs.

In the first place, we believe in medium sized pens and small flocks; in no case have we ever had our layers in larger numbers than ten or a dozen birds to a pen. We find they can then be better looked after and are more contented and at home than where many are housed together. Then we have our pens as light as possible with warmth. Too much glass in poultry houses means a cold pen at night, which may cause colds in your flocks, so, though it is wise to get all the light you can, do so with as few windows as

BANKERS.

WELLS, FARGO & CO'S BANK, - - - - 63 Broadway, New York.

OFFER 200,000 SHARES TREASURY STOCK AT $3.00 PER SHARE.

THE CALIFORNIA KING GOLD MINE COMPANY owns 23 claims in Picacho Basin, four miles from the Colorado River, in California, and twenty miles by direct road from Yuma, Arizona. . . . . .

DEVELOPMENT work has been in progress for six years, and more than ten thousand feet of shafts, drifts levels and cuts have been completed and paid for.

Upwards of fifteen million tons of ore are now ready for the mill, all of which will be mined by open cuts at a nominal cost.

A CONTRACT has been entered into for the erection of a mill and cyanide plant capable of handling 1,000 tons of ore daily, which will be completed this year. The Directors guarantee that this plant will be placed in operation, regardless of the amount of treasury stock subscribed. The net profit after commencing work will exceed $60,000 a month, and probably reach $100,000 a month within a year. The ore in sight will supply such a plant for more than forty years, assuring an annual return of 20 per cent or more on the investment.

There is no promotion stock. No salaries to officers. Every dollar realized from the sale of stock, goes into the treasury to pay for the plant. Reports of J. Ralston Bell, London; William A. Farish, Denver; Emerson Gee, Denver; P.C. Du-Bois, Berkeley, Cal.; J. L. Shepherd, and others, all eminent mining engineers, strongly recommend this property.

This is an Opportunity to invest in a large Mining Property of known value, managed by experienced mining men in the Interest of stockholders

Application will be made for listing the stock on the Boston Stock Exchange. Prospectus and any information desired will be furnished on application. Subscriptions received by

The California King Gold Mines Co.,

32 Broadway, N. Y. City.

George F. Beakley, City Agt., Johnstown, - - - N. Y.

possible. Where we can manage it, we prefer scratching pens apart from the roosting place, as such places are likely to be cleaner and drier to scratch in, but as we believe in utilizing all space, we use drop boards under the roosts, and, as a rule, the litter can be kept reasonably clean and dry if renewed at intervals, as it becomes damp or soiled.

The morning ration for our Brahma laying hens is about a quarter feed of ground oats and corn, mixed with an equal bulk of bran, and moistened so as to merely cling together with scalding water or milk if available This is prepared beforehand and is fed when barely cold. Fed soon after daylight, this is cleaned up "while you wait." The trough is immediately removed and a few small grains are kicked about in the litter, which covers the floor to a depth of two to three inches. We use for this purpose cut straw or oat or wheat chaff.

No regular ration is supplied at noon, but pulped roots, preferably mangolds, are given, and any meat, bone, or such like is fed at the same time. We aim to encourage the fowl to take as much of this vegetable food as possible, and find by feeding a little pulped roots at a time and at frequent intervals they will eat more than if fed a full ration at a regular time of the day. A cabbage hung up in the pen is also a good means of supplying green food.

The afternoon ration is fed about three or four o'clock and consists of mixed grains, chiefly corn and wheat, which we believe best suited for egg production. Barley is fed occasionally, though we believe it too heating if fed exclusively. Oats are fed sparingly, and then only in the ground state as morning ration.

Grit and shells are always before our fowls, and a small pail of water placed on a larger box in one corner of the pen is kept sweet and clean from the constant throwing up of chaff by the scratching birds.—H. D. Sherwood in Canadian Poultry Review.

Meersch on Eggs, Again.

THE PRESERVING OF EGGS.

When the price of eggs falls to the lowest level it will be found more profitable to preserve most of those not required for home use, so that they can be marketed later in the year and then sold for more remunerative prices. This detail of profitable poultry keeping seldom receives as much attention as its importance warrants. The country markets are flooded with eggs at a time when the supply almost exceeds the demand. But if they are kept back at this season and preserved they can be sold as cooking eggs at Christmas for higher prices than they now realize as new laid.

Numerous methods for storing and preserving eggs are adopted. Prizes have even been offered by some associations, but nothing prominently superior to the modes already generally known has been disclosed. The processes chiefly adopted are greasing the eggs, packing them in table salt or in peat moss, and storing in lime water. Greasing the eggs can be done in various ways. One method is to melt some fresh lard in a basin and dip each egg into the melted lard till it is covered all over. The eggs are then allowed to cool for a few minutes and are afterwards wrapped separately in thin pieces of paper and packed in boxes Another way is to smear the hands well with melted fresh butter and to rub the eggs with the grease, afterwards packing them in baskets and placing them in a dry and cool place. Melted mutton suet is used by some people, with which the eggs are rubbed and then stood on their large ends in dry bran, layer upon layer, in boxes. The boxes are closely covered and placed in a cool spot. The object of placing the eggs large end downwards is the weight of the air chamber, which is thus supposed to be prevented from expanding.

To preserve the eggs in table salt earthenware jars are required. A layer of table salt, two inches deep, is first put in, then a layer of eggs, large ends downwards, continuing with alternate layers of salt and eggs till the jar is nearly full. On the top a thick layer of salt is spread and the jar covered with a stone lid and placed in a cool place. Packing the eggs in peat is very simple. The peat is dried and then ground fine. The eggs are placed in boxes in layers, with peat in between each layer, in the same manner as preserving in salt. Another process is to cover the eggs with white wax and pack them in sand, or to dip in a strong solution of gum water and then place in salt. Eggs operated on in these various ways when tested at the end of three months will be found all in about the same preservation.

A method of preserving eggs which has been recommended is to wrap each egg the day it is laid in a piece of newspaper, then to pack side by side in a box till the box is full. After the lid has been fastened down, the box must be kept in a dry, cool place and be turned upside down three or four times a week. It is claimed for this process that not only will the eggs be preserved for eating, but they can be used for hatching purposes for several months. The preservation of eggs in lime water is a method well known. Whatever process is adopted it is necessary that the eggs be quite new laid.

Another way just experimented upon is: To each pailful of water add two pints of fresh slacked lime and one pint of common salt; mix well. Fill your barrel half full of this fluid, put your eggs down in it any time after June, and they will keep for two years if desired.

A FEW FACTS ABOUT EGGS.

Ten common sized eggs weigh one pound.

Eggs boiled twenty minutes are more easily digested than if boiled ten minutes only. They are dry and mealy and are readily acted upon by the gastric juice.

The yolk of an egg, well beaten, is a very good substitute for cream in coffee. One egg will season three ordinary cups.

Hoarseness and tickling in the throat are relieved by a gargle of the white of an egg beaten to a froth with a tumblerful of sweetened water.

Beat an egg fifteen minutes with a pint of milk and a pint of water, sweetened with granulated sugar, bring to a boiling point, and when cold use as a drink. It is excellent for a cold.

Put coffee into the pot, add the white of an egg, and stir well before pouring on any water. Leave the yolk in the shell to be used in a similar manner another time. This makes a strengthening morning drink.

A. V. MEERSCH.

THE AMERICAN STANDARD OF PERFECTION.—Describes all recognized breeds of fowls. Indispensable to every breeder and fancier of thoroughbred chickens, ducks, turkeys and geese. Latest 1899 revised edition. Price, one dollar. Free to anyone sending us two yearly subscribers at one dollar each.

1500 Incubator Chicks
FOR SALE WEEKLY.
Price $15 per 100 from my laying matings, see below. 32-p. Des. Cat. Free
BREEDERS, EXHIBITORS AND SHIPPERS OF
Line Bred (Since 1892) **Exhibition Stock. Line Bred** (Since 1888) **Laying Stock.**
WHITE LEGHORNS, WHITE ROCKS, BLACK MINORCAS,
BARRED ROCKS, WHITE WYANDOTTES, LIGHT BRAHMAS.

EXHIBITION.
$3.00 for 12 Eggs.
$5.00 for 24 Eggs.
$15.00 per 100 Eggs.
The above are from my best matings. I mate no pens to produce prize Exhibition Cockerels and Pullets from same pens.
Elegant descriptive catalogue free.
The Kind to Exhibit.

LAYERS.
$1.00 for 12 Eggs,
$8.00 per 100 Eggs.
$70.00 per 1,000 Eggs.
The above stock bred for years for egg production. Birds true to shape, color, markings, and of good size. Mated with the laying blood males, will surely produce.
The Kind to Lay Eggs.

MARKET.
$3.00 for 50 Eggs.
$5.00 per 100 Eggs.
$50.00 per 1,000 Eggs.
Above stock bred more especially for market, etc. Females off in size, shape, legs, comb, eye, tail, etc., mated with extra large males will produce right for broilers, etc.
The Kind to Market.

Halt.

Editor American Fancier:

We are fond of reading poems that "jingle" as you read,
Like the brooklet on its journey down the valley, through the mead;
But when it comes to reading "stuff" that don't pretend to rhyme,
Excuse us, we're too busy and cannot waste our time.

If some who really think they're "It" could see as others see
They would take their muse an outing and hang it to a tree;
They would write more interesting or throw away their pen,
Tell us how to raise such wondrous birds and write to us like men.

They would spare the suffering "hen men" from torture and disgust,
They would drive away their sickly smile, for smile they surely must
When they read such "measly" efforts as lately have gone round;
It's enough to "break" the business and drive it in the ground.

We would like to meet these poets and look them in the face
And say to them, "Dear brothers, stop, 'ere it lands you in disgrace;"
Now, Quinius' verses are rather fair, but Zimmer's they are not;
Of Bridge's we'll say nothing, but Story's they are "hot."

Fred. Maunder will agree with me, this craze be laid aside;
If you have no other "hobby" for heaven's sake don't ride—
At any rate, please wait awhile and give us all a rest,
Or engage a poet to write for you and give us of his best.

C. BRIGHT.

Wearytown, N. J.

Poultry at New York State Fair.

Editor American Fancier: The prize list for the 1901 New York State Fair at Syracuse has made its appearance, laden with the customary obnoxious rules governing the exhibition of poultry. It seems to me that it is about time that all the poultry fanciers of this state enter a unanimous protest against these objectionable rules and arouse the management from their long continued lethargy. I believe that the $2.00 charge for membership, together with an additional charge of 10 per cent of the amount of the prize to be competed for as a coop rent, are rank impositions, considering the value of the prizes. They then "add insult to injury" by stating in Rule No. 7 that "the management reserves the right to put more than one specimen in a coop, providing the same belongs to one exhibitor." Does the word "same" refer to coop? It would seem as though it must have that reference to a man who entered but one bird and paid $2.20 for the privilege. Why do not the officers put two cattle or two horses together which were entered in the open classes by one exhibitor and the stall rent of each animal paid? Again, why do they not charge 10 per cent of the amount of the prize competed for as a stall rent in the cattle department? I will tell you why. If they did the cattlemen of this country would boycott them the following year. Compare the value of the prizes in the poultry department with those in the other live stock departments and in pools for horse racing. The poultry industry in this state is too great to be considered a side issue. If the State Fair management gave to its poultry patrons half the favors shown the breeders of Canada by their Government and by their Industrial Fair promoters, one could believe that the millenium was surely at hand.

This is a State Fair which is supposed to be conducted for the benefit of the small as well as the large exhibitors, yet it does not seem such to the former. For instance, "A" has but three birds fit to enter. He pays $2.60 in membership and coop fees, which is 86⅔ cents per bird. "B" enters nine birds (one pen and four single birds) and pays but 60 cents more for entering nine birds than "A" does for three. Is this justice to "A" or not? I believe that this state of affairs is due partly to the inactivity of the poultry fanciers to assert their rights. Discard the $2.00 membership fee and charge a twenty-five cent entry fee for each bird, with a $2.00 first prize, the same as the Canadians do, issue a catalogue of the awards, and from that time the poultry exhibit at the New York State Fair will be second to none in this country.

RAYMOND J. RULIFFSON.

Rochester, N. Y.

Hen Working Overtime.

There is a hen in the vicinity of Worthington, Ohio, that is causing no end of comment by the zeal with which she performs her domestic duties. She not only furnishes her full quota of eggs, but on two occasions has done "double service" by laying twice in one day. This remarkable hen is owned by I. C. Price, the well-known poultryman and chicken fancier, whose statements in regard to the matter are fully corroborated by his assistant, B. F. Thomas. This hen, together with one of a different species, was placed in a perfectly secure breeding pen, a few days ago, for experimental purposes. That evening while gathering eggs Mr. Price was much surprised to find three eggs in the nest of the pen, in which the two hens were the only occupants But thinking that the extra one might possibly be an old egg that had in some manner been overlooked, he was not quite positive that one hen had laid twice. So after removing the eggs, he called Mr. Thomas to witness that the nest was then entirely empty. The next day when egg gathering time came the two men went to the nest together and there were three eggs again, two of which, by their perfect similarity proved that they came from the same hen. Mr. Price has taken great care in mating this hen and expects fine results. The other freak is one perfectly formed, hard-shelled egg, within another. Some time ago, while attending to his chickens Mr. Price noticed an abnormally large egg in one of the nests, and prompted by natural curiosity, placed it under a setting hen. After a few days incubation it was scratched out of the nest and fell to the floor, but fortunately remained intact. Mr. Price picked it up and noticing that something inside rattled when the egg was shaken he broke it open and found within it another. The inner egg was natural in size, and when it in turn was opened its contents proved to be in good condition.

THE PIGEON STANDARD just issued by C. E. Twombly, editor of the Pigeon News, is a book that fills a "long felt want." It is well gotten up, contains a number of good illustrations, and is indispensable to every fancier of pigeons. Price, 50 cents. Orders filled through the office of the American Fancier.

OIL IS KING

AN INVESTMENT OF $100 IN CALIFORNIA OIL STOCK

MADE ONE YEAR AGO BY RICHARD ELLIS OF PENNSYLVANIA, GIVE HIM THE ENORMOUS PROFIT OF

$31,620.00

See Extract from Los Angeles Herald Printed Below in Verification of this Statement.

MORE WEALTH! has been created through the unparalleled success and great profit of the oil industry than through the combined earnings of many of the greatest industries of the age. There are scores of men living in California who were in poor circumstances a year or more ago who now are worth from $100,000 to $500,000 by virtue of their investments in California Oil Properties.

THE "LUCKY BOY" OIL CO.,

OF LOS ANGELES, CALIFORNIA.

Get In On The Ground Floor.

This Company is organized to produce oil. The officers are men of sterling integrity, as well as practical ability.

Field Of Operation.

The lands of this Company are located in the heart of the famous Sunset Oil District and is proven Oil land.

A Gilt Edged Investment.

There is no place you can invest your money and get such large and quick returns as in Oil stocks. Try a few shares with the LUCKY BOY COMPANY.

More fortunes will be made in California Oil Investments within the next two years than the most enthusiastic would have dared to predict. The time to buy oil stock is before the price shoots up to hundreds and perhaps thousands of dollars per share.—[FINANCIAL TIMES.

20,000 SHARES FOR SALE.

Sale of Stock.

In order to proceed with the development of our property, treasury stock is offered for sale. It is impossible to quote a fixed price for this stock for the reason that it is rapidly increasing in value as development progresses.

Do You Realize

what immense fortunes have been made in Oil Stocks?

STANDARD OIL COMPANY—$48,000,000 in dividends, 1900.
PACIFIC COAST OIL COMPANY—$13,000,000 " "
SAN FRANCISCO PETROLEUM CO.—$27,000,000 " "

One company paid last year $175,000 in dividends on a capital stock of $100,000, and land which could have been bought a year ago for $5 an acre has, by virtue of oil, advanced to $30,000 an acre.—[LOS ANGELES HERALD.

$31,620 ON $100 INVESTMENT.

A little more than one year ago a young man, a resident of Bradford, Pa., came to Southern California for his health.—He had very little money, but having had some experience with the Oil Well Supply Company, of Bradford, and reaching Los Angeles at the time he did, he secured employment with R. E. Herron & Co., the local representatives of the Oil Well Supply Company. After working with this firm for a time at its Los Angeles branch, they sent him to their Coalinga branch; after remaining in charge there for a short time he branched out for himself. About this time the "Home Oil Company's" (of Fresno) stock was selling at about $10 per share; par value $100. This young man whose name is Richard Ellis, purchased 10 shares of this stock; after holding it a little while the price advanced to about $40 a share. He then disposed of three shares, which about returned him his original investment; the remaining seven shares he held. In a short time the noted well of the Home Oil Company was acquired; the stock then began to jump with great strides, and when a California capitalist entered the field to buy up the controling interest in the company the stock advanced from one point to another until it reached $4,993 a share in the open market. When it reached the $4,500 mark Richard Ellis sold his seven shares, receiving therefor $31,500. Adding to this the amount received for the three shares previously sold, his original investment brought him a return of $31,620.00.

"Home Oil Company" has changed its stock from the par value of $100 a share to $1 a share, and on the latter amount it is paying a dividend of 10 cents per share per month, which is 120 per cent per year on the present par value of its stock. In addition to paying this dividend, it is constantly putting down new wells.

There are quite a number of oil companies legitimately earning and paying large dividends on their stocks and their end is not yet.

The above history of what an investment of $100 did for Mr. Ellis, while sounding like a fairy story, is not a rare exception, but hundreds of fortunate people living in California to-day, who two years ago were not worth $100, are to-day numbered among the wealthy California residents. There are quite a number of these "oil kings" living in Los Angeles.—[LOS ANGELES HERALD, Dec. 2, 1900.

RISE IN OIL STOCK.

VALUES HAVE INCREASED REMARKABLY WITHIN A SHORT TIME.

San Francisco, Jan. 8,—As an instance of the rapid rise in values of the leading California oil stock, Sylvian Salomon reports to-day that San Joaquin, which was placed on the market at 60c., is now worth $13.

Kern River started at $2.50, is now selling at $17. Oil City petroleum first listed at $10, is now selling at $36. The foregoing prices were paid to day in the open exchange for these stocks.

F. T. Knowing's, Queen Esther, which opened at 25c., trebeled in value to-day. —[NEW YORK COMMERCIAL, Jan. 9, '01.

The officers at the head of this company are men of sterling integrity, standing high in both business and social circles. It is not the purpose of this company to make its money by selling stock, but by carefully and thoroughly developing its splendid oil lands. The best proof of this being the guarantee given which makes investors absolutely safe. Send in your order at once. Call or write for prospectus.

Make all money order Drafts in Checks payable to W. H. BALDWIN & COMPANY.

W. H. Baldwin & Co., Brokers,

Milwain Bldg, Albany, N. Y.

Wooster, Ohio.

Editor American Fancier: The fourth annual poultry show by the Wooster Poultry Association will be held December 12th to 17th, 1901. The Wooster Poultry Association is one of the best organizations in Ohio. It is up to date in every particular, conducts a show on business principles, gives every exhibitor just what the judge gives them and pays all premium money, has one of the best buildings that can be found for holding an exhibition, and, above all, the members treat all exhibitors the best they know how. Our membership is large and membership fee is $5.00 guarantee to pay all premiums in full; no pro rata. Last winter the State Poultry Association held their annual exhibition with us. Ask the boys about us. They seemed to enjoy themselves. Those present took their premium money home with them and can do it again this year. We will offer several elegant silver cups this year. Our dates this year follow State show. Make up your mind to be with us, as we will put up a show equal to the best in the Mid-West. We have closed contract with Charles McClave and have other judges under consideration. I will say no show ever has been held in Ohio where buyers were more numerous than at Wooster last year. The one drawback was that the boys brought so few with them for sale. Bring them out next time; you can sell them. Remember the dates, December 12th to 17th, 1901.

W. A. LOTT, Sec'y.

Wooster, O., June 19th, 1901.

Show at Washington, D. C.

Washington, D. C., June 22. — A meeting of the Washington Poultry, Pigeon and Pet Stock Association was held last evening at 1264 32d street, at which plans were further considered for the proposed show to be held in Washington, beginning Tuesday, November 19, and continuing for the remainder of the week. It was decided to admit the members of the Belgian Hare Association and exhibit their stock at the show, allotting a sufficient space for that purpose.

Several committees were appointed, including one of six members to arrange for entrance fees and premiums for the various classes of pet stock to be entered, the entries to the show to be closed about November 1. The association has facilities for cooping about 1,500 exhibits, but it was decided to limit the number to about 1,000 in all and select only the best stock for exhibition purposes.

Several proposed novelties for the show were suggested, including the giving a Belgian Hare stew every day of the show from 12 to 2 o'clock, to which the public would have free access. An exhibit of several hundred canary birds will be given a central space in the hall, the large cage in which it is proposed to confine the birds to be decorated so as to give it the appearance of a woodland scene.

American Black Minorca Club.

Editor American Fancier: In addition to the list of specials printed in your last issue, I have received the following:

W. W. Graves, Butler, Mo., $2 cash for 3d cockerel, $2 cash 4th cockerel, $1 cash 5th cockerel.

Dr. C. J. Andruss, Canandaigua, N. Y., $2 cash 3d pullet, $2 cash 4th pullet, $1 cash 5th pullet.

J. Y. Yelton, East Orange, N. J., one of his celebrated New York brooders for best shaped pen, cock, hen, cockerel and pullet, owned by one exhibitor.

The list of club specials up to date amount to about $200, and are so placed that no one exhibitor can sweep the deck.

Payment of dues are now in order.

CHAS. L. BLANTON,
Sec'y-Treas.

Falls Church, Va., June 25, 1901.

Ball Bearing Bone Cutter

Back Geared Three to One.

It is geared to save power, making it the easiest running, fastest cutting bone cutter ever built. It will cut anything a fowl will eat—green or dry bone, gristle, meat, corn or vegetables. Self-regulating. *It cannot be clogged.*

Green cut bone brings the young chick to maturity quicker than any other food. Our book, "How to Make Poultry Pay," explains how and why. Sent *free.*

E. C. STEARNS & CO.,
Box 12, Syracuse, N. Y.

To Brown Leghorn Breeders

Friends of the American Single Comb Brown Leghorn Club will be pleased to learn that this recently hatched prodigy of poultrydom is growing most encouragingly. It has not been chilled by cold, wet spring weather, nor will it waste away during the coming hot dry summer months. Like a vigorous, healthy young Leghorn chick, it is taking on feathers fast, with every promise of blossoming out as an attractive show specimen next fall and winter. Do you realize that the time to prepare for the show-room is fast approaching? What part are you as breeder and exhibitor going to take in helping the club representative of the breed you are striving to perfect in coming events?

It is desired to start this club's show career by a good appearance in every state throughout the country. If your state is not represented, don't blame anyone more than yourself. The door is wide open and a sign hangs out inviting you to come in.

Now, to make a good showing in a state, there must be at least ten members in that state. It should be no hard task to secure that number, at least. Do your part by sending in membership application at once and then get to work and assist in pushing the club in your state, all to the good of the little Browns. C. M. DAVIDSON, Sec'y.

Chicago Lawn, Ills.

PIGEONS.

Lofty Thoughts of the Editor

William Phlagn and Robert Joos, of the American Pigeon Keeper, have been selected to place the awards at the Milwaukee State Fair.

—

Mr. Henry Tiemann has had the misfortune to lose by death an extra good Black Laced Frill cock he had recently imported, which was considered good enough to win.

—

Boston show managers are making efforts to have a few new faces on their judging list next winter, and have already engaged one who has proved his worth and drawing power at old country as well as American shows.

—

Mr. Henry Tiemann has been engaged to judge Milwaukee, Wis., winter show, as well as at the St. Louis show.

—

Philadelphia people are making arrangements to have a list of pigeon judges that will command respect, as well as entries from pigeon fanciers who show.

—

There is a strong probability of additional judges being placed on the list for the Pan-American, and rumor has it that Mr. Chas. Wagner, Mr. Donovan (both of Toronto, Canada), and the veteran F. M. Gilbert are the ones.

—

There is no doubt American exhibitors have a new source of competition to settle with at the Pan-American, and that is the best birds in Canada, which, from Government assistance in the form of free entries to all Canadian exhibitors, will no doubt bring out such an exhibition of Canadian entries as has never yet crossed the border. Let's hope this will only be the beginning of such coming to our largest shows.

—

The Toronto Industrial Exhibition authorities have got out their premium list and are offering strong inducements for a good display of pigeons in the form of good classification and liberal prize money, without the objectionable conditions as to number of entries we have to put up with here. The first show on this side that does away with that "heads I win and tails you lose" plan will receive the hearty support of fanciers, who, though they do not say much, feel that it is a most unjust and unreasonable condition to impose upon exhibitors, while, if there is an extra large number in the class, the rule does not work the other way, and it's a poor rule that don't work both ways. To put it in still another form: "What is good for the goose is good for the gander." Our first-class shows do not treat American exhibitors nearly as liberal as English shows treat those who exhibit with them. Many shows across the water give a 3rd prize, and very few that charge one dollar entry fee give less than from six to eight for first and three and two for second and third.

—

Mr. Lang has published the by-laws, constitution, and proposed standard for the Jacobin Club, and while I am not perhaps as well qualified to speak as some other members, there is in the standard colors to be recognized by the club a tendency to fall over backwards. It may be all right to give recognition to Blues, as efforts have and are being made to produce such of regular Jack quality, but so far they are woefully deficient in those properties that go to make up a first-class specimen and also in the production of the color. There has not been a Jack that I have seen that is worthy the name if its color were totally ignored, but here is a proposition to add Silvers! This, I think, would be best left until they are shown, and even then it might not be advisable to give two colors that can't muster a corporal's guard with any semblance of quality, and out of five colors—Black, Red, Yellow being the English standard colors—for us to add Blues and Silvers is sort of rubbing it in until they are brought forward with something to recommend them. The Strawberry is a much more worthy candidate for eligibility for being recognized as a standard color, as well as Duns, but they are properly considered off colors and are not catered to, but who has not seen many of the former color that could win bar color against anything?

F. W. GORSE.

Highlandville, Mass.

White Pigeon Legends.

The pigeon or dove is the centre of a mass of folk-lore of different kinds; it figures in various capacities in folk-tales; flights of white pigeons, or groups of three, which can at will transform themselves into lovely maidens, and equally at will resume their bird form, are met with in Hungarian tales and elsewhere. There are widespread superstitions connected with the bird's feathers. No one, so country folk believe, can die easily and peacefully lying on a bed, or with the head resting on a pillow, stuffed with pigeons' feathers. The bird has long been much used in popular medicine—pigeons laid to the feet of a sick person were of old usually the last remedy tried. The bird is reported to have no gall; to be sprinkled with its blood is ominous; it has been used in incantations against witchcraft; and so the list might be continued. But perhaps the most marked and most persistent of the many legends and ideas associated with the dove are those connected with white pigeons.

For at least the last 1,800 years the white dove has been associated with death. Every reader of Charles Kingsley's "Westward Ho!" is familiar with the legend of the white pigeon which always appeared as an omen of the death of some member of the Oxenham family. The idea that such an appearance is ominous has not been confined to Devonshire, nor to any particular family. It is common in many parts of the country. Richard Gough, in his account of the antiquities and history of the parish of Myddle, in Shropshire, which was printed in 1700, gives a long narrative of such an association; not with persons, but with a place. At a certain farm called Cayhowell, in the parish named, it is observed, he says, "that if the chiefe person of the family that inhabits in this farme doe fall sick, if his sickness be to death, there come a paire of pidgeons to the house about a fortnight or a weeke before the person's death, and continue there until the person's death and then goe away. This I have knowne them doe three severall times." He then proceeds to give circumstantial details, with names and dates, of these alleged occurrences, and he also describes the pigeons. The tops of their heads, their backs, and their wings, except the long feathers, were of a "light brown or nutmeg color," while the rest of their bodies and wings was all white.

The common belief nowadays is that when strange white pigeons (and in some cases other birds) are seen hovering round a house, or tapping against the window-pane, or resting on the sill, it is a sign that a death will soon occur in the house indicated. The late Mr. William Henderson, in his well-known book on the folk-lore of the northern counties, mentions as a fact that the then recent death of a clergyman of note in Hull was preceded by the circling of a pure white pigeon round the house, which rested again and again on his window sill. The same writer records that a Yorkshire vicar had told him how he had heard from one of his parishioners of a like portent in the case of a Primitive Methodist preacher, a very worthy man, who had fallen down dead in the pulpit soon after giving out his text. "And not many hours before," said the vicar's informant, "I had seen a white pigeon light on a tree hard by, and I said to a neighbor I was sure summat were going to happen."

It is not always death, however, which follows the apparition of the dove. For instance, nearly twenty years ago, a correspondent of a literary journal related that a woman living in a Bedfordshire village was disturbed one night by a noise in the next room as of a fluttering bird. In the morning a pigeon, which had evidently flown in through an open window, was found dead in that room. The neighbors were unanimously of opinion that the occurrence would be followed by either a death or a fire; and a few days later, said the narrator, "an alarming fire broke out in the room in which the woman dried her linen (for she was a laundress), and she was herself severely burnt in endeavoring to extinguish the flames."

This idea that the appearance of a white pigeon is an omen of death or disaster is doubtless a development of, or an offshot from, the ancient association of a white dove with the departing spirit of man. Very many instances of this association are to be found in the lives of mediæval saints. Sometimes the soul at the moment of dissolution is said to have been seen leaving the body in the form of a white dove and winging its way upwards. Sometimes a single pigeon, or a flight, is recorded to have appeared just before death—embodied angels sent to receive the departing soul and convey it homewards. When St. Devota was martyred, her spirit was seen, says the chronicler of the acts of the saints, to leave her mouth in the form of a white pigeon and fly heavenwards. At the moment of St. Polycarp's death, a white dove is said to have issued from a wound in his side and winged its way high into the clear air. When St. Georgia of Clermont died, a flight of white pigeons settled on the roof of the house, and were supposed to be a troop of angels sent from heaven to receive the spirit of the dying saint.

But it was not only recognized saints whose spirits thus took visibly pure form. In mediæval times and even later, it was thought that the souls of innocent persons dying by violence were similarly made manifest. There is a story of the visible departure of Joan of

Arc's heroic soul in this manner. The "Chronicle of Florence of Worcester" relates how when in A. D. 819 St. Kenulph, King of the Mercians, died, he was succeeded by his son Kenelm, who was only seven years of age. A few months later the child was slain by his tutor under a thorn-tree in the midst of a vast wood. "Milk-white in innocence and pure as when born, fell the head of Kenelm; from it a milk white dove, with golden pinions, soared to heaven." Mr. R. C. A. Prior, in his translation of "Ancient Danish Ballads," has a poem relating to Eline, a martyr who died at the stake. As the flames shot upwards two doves appeared from the sky and were seen to fly towards the pile—

Amid the brands their course they stayed;
Eline to follow them they bade
'Twas two flew down, and home flew three,
The fairest of them all was she.

The appearance of a white pigeon also indicated the whereabouts of a body which had died by violence and was lying unburied. Mr. Thomas Ratcliffe, an authority on Midland popular lore, quotes an old street ballad called "The Effects of Love," wherein a slighted woman, resolving to drown herself, says to her false lover—

As a token that I died for love,
There will be seen a milk-white dove,
Over my watery grave will fly,
There you will find my body lie.

There is a German legend to the effect that about a hundred years ago, whenever a certain bedroom in an old house at Weinheim was in darkness, a white pigeon flew restlessly along one side of the room. When it was found that all efforts to drive away this spectral bird were vain, the wall was examined, and in the hollow was found the skeleton of a new born child. The little bones were duly laid in the churchyard, and the white dove ceased to appear.

Much folk-lore, especially of that section of it which relates to death and to possible transformations of shape after death—were wolves, vampires, and the like—is ghastly and repulsive; but these gracious legends of the embodiment of the souls of the saintly and the innocent and wronged in the forms of fair white doves are beautiful and touching.—The Globe, England.

PET STOCK.

Our English Belgian Hare Letter.

Editor American Fancier: It is indeed a very great pleasure to find such a good fancier as Mr. Babcock, and if I can I shall be very pleased to enlighten him with regard to the so called "white elephant," or, as they are named on your side, White Belgian. Here, I greatly regret to say, it is impossible to enter into a discussion in the fancier press without running counter to some one and crossing swords with many. Not that they differ in my theories, but my home thrusts are at least very unpleasant, because I always try to express briefly my honest convictions.

My convictions on White Belgians are still unshaken, because my experience and the experience of our longest and largest breeders share with me the expressions I have tried to impart to you and your readers. I have done so from no other motive than to try and check a false impression, and I therefore repeat that I have never heard nor seen such a thing as a White Belgian.

The breeders of Belgians have always desired to breed rabbits as near to in appearance as the wild hare of this country. It has cost heavy outlays and great perseverance to have arrived at that high standard of perfection which is seen in the Belgian Hare bred here.

I have explained that it was necessary at first to introduce the blood of the Flemish Giant, but having obtained the necessary amount of blood from that animal it has been discarded by our breeders and has taken considerable time by inbreeding judiciously to eradicate its excessive coarseness. I mean, first, the bone, which is far too large in length and thickness; secondly, the flesh partakes of that objectionable softness which is not in that particular in the wild hare; thirdly, the character of the head of the Flemish Giant is altogether unlike the real hare; and fourthly, the ears are quite wrong, far too thick and broad; fifthly, the hind quarters, considering the great weight it has to support, are far too big and without symmetry. Note the graceful and beautiful lines of the hare, which are so truly portrayed in its duplicate of today that if placed on the grass would be taken for the wild hare. I have some six I am sending out, which are excellent and very like it.

Now, let me remind Mr. Babcock in all good fellowship that possibly he is not acquainted with our hare, the weight of which alive seldom varies more than 7½ lbs. and dead 9 lbs. Our best copies here are perhaps not quite so heavy, because by having the increased weight you lose symmetry and you are certain to have the dewlap, which is never seen in the wild hare and has been such a trouble to get rid of and to breed out. The lines of our hares are simply perfect, and here let me say that by your introduction of the Belgian Flemish Giant your hares will go back many years, and permit me to add you will stand no earthly chance of beating us if that plan is continued. Readers, I like all varieties of rabbits in their proper places, but when breeding Flemish Giants are very dangerous to play with if you are an inexperienced man. Doubtless, Flemish Giants are profitable rabbits for food, but cannot be classed in the same category as the Belgian Hare—the most beautiful variety produced.

I am unable to state how the Flemish Giant was produced, but I have a strong belief that it was bred from some of the largest kinds of Lops, crossed with some Continental rabbit, which may have been white, but certainly not brown, yellow or black. A vast quantity of the dead rabbits which are imported from Belgium here have a very high percentage of white fur, and hence my belief in thinking that the Flemish contains a high percentage of white blood.

Your authorities, I feel certain, are very, very wrong in raising the standard of weight by the further introduction of Flemish Giant blood, and I do hope to find that for the future our weights will be similar. If not, believe me you will lose all that beautiful shape and symmetry and produce a large rabbit without brightness of color and ticking and hare like ears and head, and, in addition, you will tell me in a few months that all your hares have fine large dewlaps.

I am unable to say whether there have been such rabbits as White Flemish Giants, but I repeat that out of the thousands I have bred I have neither seen a White Belgian nor have I ever heard of such a thing, and during the whole of my life I have had the happiness of discussing with our largest breeders and have never heard that they have bred a white hare.

Now, let me say that if I have time I will do my best to try to impart to your young readers my experience with reference to the best mode of keeping "Rabbits in Confinement."

ALFRED CRITCHETT, SR.
Bandora, Sutton, Surrey,
Eng., June 10, 1901.

The Precocity of Young Belgian Bucks.

Editor American Fancier: Every breeder of Leghorns knows something about the precocity of the young cockerels, who begin to manifest their sexual characteristics at the age of six or eight weeks. But not every one realizes that young Belgian Hare bucks are, also, extremely precocious. Experience, however, is an excellent teacher, though the terms of tuition are somewhat high.

I had a lot of young Belgians running together in a good sized pen. They were of both sexes. After they were about two and a half or three months old, they began to die. I didn't understand it, could see no sufficient cause for the loss, and for a week or two I simply wondered.

Next to them, in a pen of similar size, I had two litters of young orphaned or motherless rabbits, one of Belgian Hares, the other of Flemish Giants. The does producing these young had died, one from broken limbs, the other from some unknown cause. By and by these two litters of young began to die, and I found that one or more of the Belgians in the adjoining pen had got over the division and was among them. Then it dawned upon me that perhaps the young bucks were the cause of all this trouble.

I examined the remaining Belgians, eight in number, and found that six of the eight were young bucks. Those that had died in that pen, I now firmly believe, were does, for it does not seem reasonable that one sex should so strongly predominate over the other.

And so I came to the conclusion that the young bucks were extremely precocious and had chased and worried the does in their own pen and the young of both sexes in the other, until to the poor harrassed little creatures life did not seem worth living and so they ceased to try to live.

This conclusion was strengthened by what followed. I immediately separated the eight young hares, putting the two does into one hutch, two bucks into another, and four bucks into a third, having regard to the size as well as the sex of the animals. Immediately upon doing this, the loss ceased. The young all began to thrive and at this writing are developing finely into long, racy, handsome creatures.

The want of realizing—though I knew the fact theoretically—of the precocity of young bucks caused me a serious loss. They looked so young, and withal so gentle, that the necessity of separating the sexes seemed by no means urgent. But the urgency really existed, and the breeder of Belgian Hares who neglects to separate the sexes after the young are twelve weeks old is taking chances that may imperil his success. He cannot afford to do this.

Another thing that this little experience taught me was that it will not do to guess at sex from general appearances. We have come to associate masculinity with coarseness about the head. In nearly all animals the male is the coarser built, larger headed one. The bull with his great head and curling hair between the horns stands as the general type of the male throughout nature. But among these young Belgians there was one with a coarse head, the most masculine-looking one in the lot, and that one was a doe. The three with the finest heads were all bucks. This deceiving appearance, I think, tended to throw me off my guard, for I really thought that of the eight hares seven were does and one only a buck, whereas, as I have before stated, six were bucks and two only does. Had the fact corresponded with the appearance, there would have been no trouble to mourn over, for one buck with a lot of does would have caused no loss.

The conclusion of the whole matter is that Belgian bucks are extremely precocious and that a breeder should examine the young carefully by the time they are twelve weeks old and separate the sexes. It will not do to trust to general appearances in determining sex and it does not pay to trust to luck in rearing the sexes together. The exercise of due care is a condition of success in rearing Belgian Hares.

H. S. BABCOCK.

Scraps on the Belgian Hare Rabbit.

Stale bread that is sweet and free from mold softened with sweet skim milk will be found of great advantage for nursing does, also for youngsters until they reach an age where their stomachs are strong enough to digest other food. It should be slightly salted and a raw egg with a little sugar added tends to improve it.

Slobbers is the result of indigestion and causes more deaths among Belgian Hares when they are from four to eight weeks old than all other causes combined.

A few drops of muriatic acid in their drinking water, just enough to give it a slight tart taste, will prevent colic and cure indigestion. Another remedy is twenty drops of the following administered two or three times a day in a little water: Spirits of nitre and spirits of juniper equal parts. Salt and water often effects a cure. A lump of rock salt should always be where they have access to it.

Does often use their teeth as forceps to assist them in kindling. If the teeth are sharp they will lacerate the young and the taste of blood will cause them to destroy their progeny.

Examine the does' teeth by putting on a bridle, using string for a head piece and a lead pencil for a bit. If the teeth are sharp, with a fine flat file smooth up and blunt the sharp edges.

If a doe shows signs of kindling by pulling fur, carrying straw and building a nest two weeks after being bred, test her and see if it is not caused by her desire to mate again. This will save two weeks' time.

If youngsters come out of the nest sooner than they naturally should it is usually in search of food, the natural supply having run short. Supply them with bread and milk, warming it enough so it will not chill them, until their stomachs are strong enough to take it cold, particularly in cold weather.

Use good unpedigreed does for nurse does. It costs no more to keep them than any others, and if it turns out the nurse doe is not needed the value of her own litter will more than reimburse for her cost over that of a scrub doe.

A teaspoonful of warm carbolized vaseline poured into the ear will cure canker.

For influenza or colds in warm weather syringe the nostrils and sponge off the front legs with germol, chloro naptholium or crude sanitas, whichever one is the most convenient to obtain, using about two teaspoonfuls to a pint of water. As the membrane of the nose is sensitive, do not use it too strong.

In cold weather for the same purpose administer the following dry powder with an ordinary fly gun, injecting it into the nostrils: Boracic acid, one ounce; oil of eucalyptus, half an ounce; menthol, half a dram; powdered starch, four and one-half ounces; sanitas oil, two drops. Dissolve the menthol and eucalyptus by mixing them together. Mix the others and then mix all together. Some dissolve quinine in water and give half a grain night and morning in addition, administering it with a syringe.

In mating, if either hare is inclined to be abusive, put them in a strange hutch. It may be necessary to blunt the teeth as described above in this article, also the toe nails. One vigorous buck will be found sufficient for half a dozen does.

Use nest boxes in the winter. Put plenty of litter in the hutch, but let the doe place it in the box herself. In the summer they do better without nest boxes, as it enables the doe to give the youngsters better air as she removes the covering, which she does gradually from day to day.

All Belgian Hares will burrow if allowed to come in contact with the ground. Unless a doe has had milk producing food for a week previous to kindling, she is not likely to have a supply of milk ready for her family, as a consequence the youngsters die from starvation unless a nurse doe is promptly provided.

Does do not like too close attention during kindling, and usually do better when left very much alone. If they deposit a youngster outside the nest it may be necessary to place it in the nest before it is chilled. Aside from that very little can be done by the attendant.

If you are breeding hares for food, geld the bucks as soon as they are sufficiently developed, say at about ten weeks old. They will then run together with less danger of injuring each other, are more quiet, also grow and take on fat more rapidly.

If you desire to retain them as breeders they should be separated at the

same age, otherwise they are very liable to ruin each other for the purpose.

In selling, examine each one carefully when boxing to be sure they are perfect for breeding.

Sudden changes in food is very liable to result in injury. Everything in the way of change should be done gradually.

It is not necessary to have clover hay to feed. They will do well on almost any variety of well cured, clean, sweet hay, accompanied by plenty of oats after their stomachs are strong enough to digest heavy food. When fattening them add some corn to their bill of fare.

Second growth clover, cabbage and green feed in excessive quantity before they are three months old is liable to result in indigestion, slobbers and death.

An inclination to mate is indicated by inflammation, which it is very easy to detect. Examine the sexes of adult hares by exposing the parts. This will enable you to detect the difference in sexes of young hares.

Young hares change color with each successive molt and grow red as they grow older. They do not reach their true color until mature and often improve in shade, ticking and lacing after a year old.

One service is sufficient and is the rule followed by the best English breeders. Six well fed youngsters are better than ten or twelve insufficiently nourished ones. Employ a nurse doe and divide them or destroy all but six or eight.

Bunches or abscesses come from injuries, bruises and other causes. Unless it is a valuable hare, it better be destroyed at once. If a valuable animal and considered worth the bother necessary to attempt a cure, lance gently, squeeze out the pus, syringe with dioxide of hydrogen, afterwards with diluted creoline or the same as recommended herein for influenza. Repeat as often as necessary, as the abscess is liable to form several times before a permanent cure is effected.

As to the proper age to breed a doe. This depends largely on her development. I have had does kindle when only a little over four months old, afterwards develop into large, strong does and prove themselves great breeders. Others are not mature enough before they are eight to ten months old; therefore, I do not think that a rule can be laid down that will fit all cases.

As to how often a doe should be bred also depends largely on the condition of the doe. There are many theories advanced on the subject of the Belgian Hare which experience has proved to be incorrect.

Notwithstanding it is claimed a hare will eat everything, thrive on anything and do not require any particular care, those who start in with a moderate number, study their habits and requirements and increase their knowledge and numbers at the same time, are the ones who will succeed.—M. A. Nicholls in Poultry Advocate.

For sale at a bargain, cockerel, 1st at Torrington; 1st and special at Troy, 1900; cockerel, 1st and special for best White Rock in show at Lenox, 1901, Some 1st prize winning females and sire of these birds. Eggs, $1.50 per 13. Stock on approval. FREDRICK HOERLE, 234 Migeon Ave, Torrington, Ct. 88-tf

WETZEL'S Blue Ribbon Buff Rocks are the best. Geneva winnings, 1900, 1 and 2d cockerel, 1st and 2d pullet, 1st and 2d hen, 1st pen and all specials, 35 competing; Middletown, '01, 1st cockerel, 1st, 2d and 3d pullet, 1st hen, 1st pen and specials, 61 head competing; Cleveland, 1901, 1st cock, 1st 2d and 3d cockerel, 1st pullet, 1st pen, Buff Rock Club's silver cup, 58 head competing; also Association's $10 gold special for best 10 P. Rocks in the show, all varieties competing. Eggs $5 per setting straight. Fowls $5 each and upwards. FRANK WETZEL, Painesville, O. 99-37

BUFF ROCKS.—Better this year than ever before. In addition to my own prize winning stock, I have bought some of the best birds money could buy; birds that have won prizes, or bred from prize winners in most of the leading shows. They are as fine a lot of birds as can be found in this country. Eggs for bal. of season, $2 per 15. RALPH J. WEIL, Cambridge, N. Y. 85-36

HIGGINS' Buff Rocks won 1st prizes at the largest shows in America: At Boston, Hagerstown, Fitchburg, Clinton; in the hands of my customers at Madison Square Garden and large shows in the west. Have some of the grandest matings this season I ever owned. Will sell eggs from same pens as I use myself at $3 or two settings, $5. H. W. HIGGINS, Orange, Mass. 33-tf

I BRED White Rocks 11 years. Have them better this season than ever; pure white, low combs, yellow legs, correct size and shape. At Sanatoga, on 5 entries won 5 1sts. At Harrisburg on 4 entries won 4 1sts and all specials. 200 birds for sale. Eggs, $1 per sitting; $5 per 100. 60-tf D. L. STAUFFER, Spring City, Pa.

MY BUFF PLYMOUTH ROCKS have won for me at Madison Square Garden, Boston, Pittsburg, Washington, D. C., and other great shows, proving their quality. Prices are right, too. Stock and eggs for sale. Circular and show record free. MILES LOUER, East Onondaga, N. Y. 81-32

WHITE PLYMOUTH ROCKS.—W. C. Pierce & Co., 1st, 2d, 3d cocks. 96¼, 95¼, 95¼; 1st, 2d, 3d (tie), 4th hens, 96, 95½, 95¼; 3d, 4th cockerels, (tied 2d), 95¾, 95¼; 1st, 2d, 3d, 4th pullets, 96¼, 96¼, 96¼, 96; 1st, 2d pens, 192 9-16, 191 5 16; also best display. This was made in hot competition, 78 birds in class. This record with our wonderful winnings at Chicago last year stand alone and unequaled on this variety. W. C. PIERCE & Co, Indianapolis, Ind. 73-24

BEAN'S BUFFS are the real winners as the following records for 1900 will show: At Cambridge, N. Y., one 1st, four 2ds, three 3ds; Watertown, N. Y., two 1sts and three 2ds; Poughkeepsie, three 1sts and three 2ds; Dryden, N. Y., four 1sts and two 2ds; Trenton, N. J., one 1st and two 2ds; York, Pa., five 1sts and four 2ds; Lancaster, Pa., four 1sts and two 2ds; Hagerstown, Md., in the hottest competition of the year, four 1sts, two 2ds and three 3ds. This is an unequalled record. Write for prices on show and breeding birds. All my stock is farm raised. Address F. G. BEAN, Fairview Village, Mont. Co., Pa. 73-24

"PARALLEL(=) BAR" Rocks.—Eggs during March and April, $2 per 13; $8 per 100. Stock direct blood of Gardner, Thompson and Montauk. New York winners. My birds have won in good company and chicks from these eggs will win for you. Send for leaflet. H. T. BROWN, Box 471 a, White Plains, N. Y. 79-30

JAVAS.

JONES. the "Java Man."—Mottled Javas, Blk. Javas and Silver Duckwing Leghorns. Satisfaction every time or your money back. Eggs $3 per 15 and no reduction. JOHN R. JONES, Suffield, Conn. 39tf

WYANDOTTES.

ALPHA STRAIN Silver Wyandottes. Winners wherever shown. Have good combs and shape, standard weights and plumage. They are line bred and good layers. Look up my record in the Fancier. Eggs, balance of season, $1 per setting. WM. BINGLEY, 103 McKinley St., Torrington, Ct. 75-26

MADISON SQUARE Garden Winners. We have won 1st prizes two successive years at the above show on our White Wyandottes. 1901 won 1st hen, 3d and 5th pullets and 3 specials on 6 entries, 1900, won 1st cock, 3d hen and 2 specials. For the balance of season, will sell eggs at $1 per 13. Booklet free. ALLEN C. ROBERTS, Spring City, Pa. 02-tf

"WHO KILLED COCK ROBIN?"—Robbins' Buff Wyandottes are the real Buff with solid Buff wings and tails, and have won prizes in Boston, Cambridge, Rochester, Syracuse, Troy and Poughkeepsie, N. Y.; Brattleboro, Vt. and Philadelphia, Pa. I have all my prize winners in my yards and will sell eggs at $5 per 13 straight. Stock for sale at all times. Satisfaction guaranteed or money refunded. R. B. ROBBINS, Cambridge, N. Y. 42-tf

PISER'S BUFF WYANDOTTES are always winners. One year ago at Cambridge, N. Y., in the hottest competition ever known, I won 2d, 3d pen old, 1st, 2d pen young, 1st, 3d hen, 1st, 2d, 3d cockerel, 1st, 2d, 3d pullet. My customers are doing the same all over the country and in Canada and England. A pen from my yards will breed you winners next season. See add in display column. L. C. PISER, Shushan, N. Y. 77tf

THOMAS MOORE, Canada, has shipped us 16 cockerels, open laced pure English stock, for crossing on and improving on American stock. They breed the much desired epen centered pullets. They were bred from a trio of winners of 25 prizes in England; this trio the only birds bred on the place. Price $3 and $5 each. Eggs from these cockerels mated to best American females, $3 for 15. WOOD & FREEMAN, Fitchburg, Mass. 94-tf

MOON'S GOLDEN WYANDOTTES.—The Marvel Strain. At the N. Y. Show, 1901, on 13 entries, won 15 ribbons including the leading specials, the greatest record ever made at a big show. Stock and eggs for sale. JESSE A. MOON, New London, Conn. 87-38

DR. SANBORN'S BUFF WYANDOTTES won 1s1 on pen, with 7 pens in competition, at his only exhibit this season. at South Farmingham. Aiso 2 2nds on single birds. No better blood in the East. Average egg yield, ,99, 196 eggs. Eggs $2 for 13, $5 for 40. Cockerels $5, pullets $4 up. N. W. SANBORN, Wellesley Hills, Mass. 87-38

BUFF WYANDOTTES.—W. C. Pierce & Co., 1st, 2d cocks, 94¼, 93; 1st, 2d, 3d, 4th hens, 94¼, 94¼, 94¼, 93½, 1st, 2d cockerels, 92¼, 92, 1st, 2d, 3d, 4th pullets. 94, 93¾, 93, 93; 1st, 2d pen, 186 15 16, 184 9-16. There is no use mentioning the above the scores speak for themselves. W. C. PIERCE, & Co., Indianapolis, Ind. 75-26

SILVER Wyandottes as good as the best, four regular and one special prizes at Madison Square Garden, 1901. My birds are large size, clear centers and good layers. Males in breeding pens above Standard weight. A few cockerels for sale. Eggs, $2 per setting, 2 settings, $3. HECTOR W. MILLSPAUGH, Walden, N. Y. 72-tf

BUFF and White Wyandottes. My birds were prize winners at Johnstwwn. In White Wyandottes, four entries, won 2d cock, 3d hen, 2d ckl, 1st pullet and special for best cock, hen, ckl, and pullet. At Troy, 6 entries, 1st cock, 1st hen, 1st pullet. At Matteawan, in Buff Wyandottes, 5 entries, 1st cock, 1st hen, 1st pullet, 1st pen. All this in hot competition. Eggs for special matings, $3 per 15. Other matings, $1 per 15, $5 per 100. Catalogue free. EDGAR BRIGGS, Poughkeepsie, N. Y. 87-12

WHITE WYANDOTTES.—W. C. Pierce & Co., 1st, 4th cocks, 94¾, 93¾, (tied 2d); 1st hen, 96½; 1st cockerel, 95, 4th pullet, 96¼, (tied 1st and one other scoring 96¼ that did not win a place); 1st pen, 191¼. Here again in hot competition we won the big end of the prizes, especially the first, losing only one and tieing in score with this winner. W. C. PIERCE, Indianapolis, Ind. 75-26

THE WINTER LAYERS of the 19th century are Geo. Bradley's White Wyandottes. Have been bred for layers for generations, standard in weight, white in plumage, pullets lay at six months old. Eggs, $2 per 13; $5 per 39. Stock for sale at all times. Correspondence a pleasure. 39tf GEO. BRADLEY Dryden, N. Y.

BURT'S Buff and White Wyandottes won at Fitchburg, 1900, Hawkins judge, 4 1sts, 4 2nds, 2 3ds and 9 specials; at Athol, 1901, Peirce judge, 4 1sts, 1 2d, 2 3ds and 11 specials, 89 White and 42 Buff in classes. Eggs, $2 per 13, $5 per 40. 83-34 J. E. BURT, Athol. Mass.

WYANDOTTES.—Bean's Whites are winners. At Cambridge, N. Y., Watertown, N. Y., Poughkeepsie, N. Y., Dryden, N. Y., Trenton, N. J., York, Pa., and Lancaster, Pa., they won 24 firsts, 4 seconds and 1 third. There is no better stock in the country, size, shape and plumage being all there. Show and breeding stock for sale. Address F. G. BEAN, Fairview Village, Mont. Co., Pa. 73-24

die by being lousy than from any other cause. You can talk about improper care and food, lack of green food and grit, but, when looking for the root of the trouble look for lice, and when you find them look into the merits of Lambert's Death to Lice Remedies. Rev. H. H. Purrington, Mt. Vernon, Maine, writes: "We all use Death to Lice and find it most satisfactory." The Norton Poultry Yards, Dallas, Texas, writes: "We have been using your Death to Lice for the past four years and it has given entire satisfaction."

MORE CHICKENS

have head lice than most poultry keepers realize. Some think that these little pests are pin feathers on the top of a chicks' head and do not take the trouble to examine them closely until the broods begin to die off. One Massachusetts fancier says that it cost him hundreds of dollars to learn this. Death to Lice Ointment is made especially for the extermination of these little blood suckers, without injury to the little chicks. 100 doses 10c postpaid.

MORE CHICKENS

than should go into two coops are often crowded into one. The lice will then crowd into these small quarters and assist to make the nights long, hot and miserable. The little mites or spider lice crawl out of the cracks and crevices and extract more blood from the chicks than they can make during the day. Charles L. Evans, Wood River, Neb., writes: "I have given your 'special' a thorough trial. I had a hen-house that was polluted with mites. I mixed one (four) ounce box of special to one gallon of whitewash and gave it a thorough whitewashing. I now defy anyone to find a louse about my hen house."

MORE CHICKENS

properly cared for mean more money. Proper care means a liberal use of Lambert's Death to Lice Remedies as well as suitable food and housing. No poultry keeper ever failed because he put too much money into Death to Lice. Many do fail because they do not keep their flocks free from vermin. The most successful money-making poulterers are those who use the most Lamberts. We have remedies for all kinds of lice, on anything and everything. We put it up in all sizes of packages to suit all kinds of people. We have all kinds of good testimonials as to its efficacy.

PRICE LIST.

Death to Lice Powder 10 and 40 cents by mail. Large sizes 50c and $1, by express from here or nearest agency. Death to Lice Ointment, 10c and 25c by mail. Death to Lice Special, 10c and 40c by mail. Samples of one each of the above 10c sizes at one time 25c. Death to Lice Liquid, 1 qt, 35c; 3 qt, 60c; 4 qt, $1, from here or from nearest distributing point. A 64 page illustrated book mailed free. D. J. LAMBERT, box 248, Apponaug, R. I. 73-24

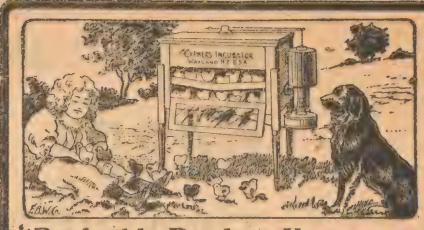
"RINGLETS" SOAR STILL HIGHER.

AT THE IMPERIAL SHOW OF THE NATION—
MADISON SQUARE GARDEN, N. Y., THE WORLD'S RECORD OF

E. B. THOMPSON'S BARRED PLYMOUTH ROCKS



4 YEARS IN SUCCESSION was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ever accomplished in the annals of the **New York Show; Winning** during **4 years in succession MORE THAN THREE TIMES AS MANY 1ST PRIZES** as any other exhibitor, and as many **1ST PRIZES** as **ALL COMPETITORS COMBINED**, besides more **than twice as many Cups** and **Specials** as all, including the **superb challenge Trophy**, value **$100**, for best cock, cockerel, hen, pullet and exhibition pen; **$100 Sterling Silver Cup** for finest exhibit, **Grand Special Prize Sweepstakes Cup** value **$100** presented by the **President** for best P. Rock cock, cockerel, hen and pullet, any variety. My clean sweep of

FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES

on pullets has never been approached in Madison Square Garden, and stands alone and unequaled.

The world's record of 1st on exhibition pen at New York 3 years in succession is the undisputed Champion. With their 1900 record the **"RINGLETS"** have won at New York a grand total of **77 PRIZES**, **31** of these prizes are 1st and specials, being 17 more 1st and special prizes than won by any competitor in the history of the show. Rare bargains in yearling breeders in lots of a trio or 100. Show bird fit to win in the fastest company. Richly illustrated 24-page catalogue on application. Elegant breeders in any number. Eggs from finest exhibition matings, 1 sitting, $5; 2 sittings, $9; 3 sittings, $12; 4 sittings, $15. ADDRESS 91-tf

E. B. THOMPSON, Amenia, Dutchess County, New York.

"Profitable Poultry Keeping in All its Branches."

This is the title of the new and elegant Catalogue issued by the Cyphers Incubator Co., for 1901. It contains 224 pages, 8x11 inches in size, over 200 fine new half-tone illustrations and a wealth of interesting, down-to-date matter, covering the subject of **Poultry for Profit** in all its branches.

This is a Brand New Book, not a re-hash of old ones. Contains special articles written by experts, and illustrates and describes over fifty of America's largest and most successful Duck, Broiler, Roaster and Egg Farms. It also contains the endorsements of over one hundred of the foremost breeders of this country—men and women who are using the **Cyphers Incubators**—and shows photographic views of many of their poultry plant: and favorite poultry houses. Ask for Book No. 9 enclosing 10c in stamps, and address nearest office.

Cyphers Incubator Company,

CHICAGO, ILL. 325 Dearborn St.
BOSTON, 34 Merchants Row.
WAYLAND, N. Y. Factory & Home Office.
N.Y. CITY, 8 Park Place.

Small Poultry Plant Sacrificed

Owing to a change of residence. I am obliged to sell my poultry plant—buildings, appliances and stock. My B. P. Rocks are E. B. Thompson and Gardner; the W. Wyandottes, Duston; W. P. Rocks, Fishel and Huyler. I have spared neither trouble or expense to improve my stock, and have some fine birds.....

Stock:

Barred P. Rocks. One yearling cock (Gardner) son of my cockerel breeder (2d prize winner at 1901 New Jersey State show.) One two year cock (Thompson) pullet breeder, 24 hens, mostly yearlings.

W. P. Rocks. One yearling cock (Fishel); one yearling hen and two yearling hens (Fishel); one hen 1st prize pullet at New Jersey State show 1900 (Huyler); three yearling hens (Fishers Island.)

White Wyandottes. One yearling cock (Duston), four yearling hens (Duston). About 75 to 100 chicks (3 breeds) from 7 weeks to 3 months old (July 1st).

Appliances. Wilson green bone cutter, used three years; 120 egg Cyphers Incubator, used three seasons; one Peep o' Day Brooder (with covered run), used three seasons; one $5 Champion Brooder, used two seasons; drinking fountains, roosting and brood coops, etc.

Building, including roosting houses, scratching sheds and feed house (about 60x8 feet, made of hemlock boards, lined inside. Neponset paper, roof covered with Neponset paper and painted—part of building. 2 years 8 months and part 1 year and 8 months old, wire runs, etc. Anyone living in or near Elizabeth could use this house to advantage.

I would prefer a purchaser who could take all (or nearly all) of stock and appliances, and who could come to Elizabeth and superintend shipping and packing. I don't want the bother. To such a customer I offer a bargain. As I am obliged to move soon this stock and property must be sold. Fowls and property can be seen at address given below. This is an opportunity for a quick buyer. 08-09

MUFFED TUMBLERS FOR SALE.

WINNERS IN ENGLAND AND AMERICA.

The grandest collection of winning Muffed Tumblers ever gotten together is now on sale, and can be seen by appointment and birds selected. I will sell any Muffed Tumbler I own and arrangements can be made to take the entire lot. The varieties are Blue Saddles, Black Badges, Black Mottles (Yellow Rose cock, 1st Boston and Chicago, price $15, one of the best living) and several other odd birds, all winners or will produce winners. My Tumblers possess characteristics peculiarly their own, having been bred carefully for years, and are streets ahead of any other strain. In the past five years I have bred more winners than all others combined. Stock birds sold to others have bred their best birds; why, then, waste time and money by breeding from ordinary stock, when for an ordinary outlay the best birds living can be obtained? Those who would like to win and breed winners are invited to correspond. Prices very low, but nothing in muff legs under $5 per bird. (Some as low as $2.50 in surplus Clean Legs.) Testimonials from dozens who have purchased winners in all parts of the country. Satisfaction guaranteed. State wants fully. See winnings at Birmingham, Eng. (1st and medal), Boston, Chicago and New York. While winning here I had a team of six winning at Birmingham, Eng., the greatest Tumbler show in the world, irresistible argument as to the quality of my stock. 48tf

F. W. GORSE, Box 228, Highlandville, Mass.

Little Brook Farm Bargains!

I will sell all my Buff Leghorns at a bargain to make room for other varieties. Four hens for $3. I will also sell a number of my other varieties very reasonable. Write and see..... 43-tf

TYPOGRAPHICAL UNION LABEL FULTON COUNTY No. 756

SATURDAY JULY 6 1901

From the Editor's Perch.

A writer signing himself "Southerner" sent the following to the American Stock-Keeper, which the latter published:

"A party has written me that exhibitors at the Pan-American from New York State are to have their prizes doubled and that the Canadian exhibitors come in entry free. Why is this done against the breeders of other sections of this country? It is, I am sure, hardly a fair deal and I think the breeders of the country should enter their protest against it. Why should we from the state of Maryland have to pay an entry fee and Canadians who are much nearer get their birds in for nothing? It seems to me that the managers of this Exposition are very short sighted and that it will result in the exhibition of poultry being from New York and Canada and by no means an all American show."

It is a pity that such false impressions are allowed to prevail and be published without comment. The Pan-American management has nothing whatever to do with the provisions made by the Canadian government or with the appropriation passed by the State of New York. If the Canadian poultry raisers are fortunate enough in having a government that is progressive and liberal enough to pay the entry fees at the Pan it is no fault of the management of the latter, neither is it a discrimination in favor of Canadians. The same can be said of the appropriation made by the State of New York. It is done to encourage the poultry breeders of the Empire State to exhibit at the Pan-American. If Maryland or any other state wishes to appropriate money for the benefit of its exhibitors, we are convinced that no one will object. But why everlastingly find fault with something that does not exist in reality? To read the numerous comments and criticisms regarding the Pan American, one would imagine that the latter was especially organized for furnishing a temporary asylum, home or watering place for every judge of poultry, pigeons, pet stock, cats and dogs in America. Furthermore it seems as if an unlimited amount of coin is expected by some would-be exhibitors on their winnings. The sooner exhibitors realize the fact that the Pan-American poultry and pigeon department is conducted on business principles, and very liberal ones at that, the better it will be for all concerned.

***

A recent letter from George H. Burgott, superintendent of poultry at the Pan, satisfies us that he has a very large contract on his hands, as far as answering the innumerable questions fired at him day after day are concerned. George is very amiable, accommodating and fair-minded, but it will tax the patience of Job to stand some of the demands made by unreasoning exhibitors. Still there is a humorous side to some of it occasionally, and the smile, so rare nowadays, lightens up Burgott's expressive "phiz." But when a certain party wrote to George to reserve several box stalls for some ferrets he wired "Tom" Rackham to send the plans and specifications at once.

***

Dr. S. T. Lea, Hodges, S. C., in the Georgia Poultry Herald writes:

"I am sorry to hear from one of my Northern friends that the American Poultry Association, which had been invited at Charleston, have decided to meet at Philadelphia. I am sorry to see this, as I think the South is entitled to the meeting, but it appears that it is an off-year with the city of Charleston, which is the chief commercial city of the first state to secede from the Union, which our Northern brethren seem not to have forgotten. No government appropriation, no American Poultry Association. Well, while we would have been glad to have gotten both, I guess we can stand it and still make the exposition and poultry display the greatest ever held in the United States. The American Poultry Association has during its long life held one annual meeting in the South, that some ten years ago. We buy their Standards and are controlled by their actions, but little good or representation does the South get from the A. P. A. I think this should be the last invitation the A. P. A. will ever get from the South, as it appears that when it comes to the annual meeting, 'the South aint in it.'"

We regret to read such unkind remarks, especially when there is no occasion for them at the present time. The executive committee of the American Poultry Association vote on the location of the annual meetings and as no vote has been called up to the time we write these lines, it seems rather premature to call the society down. Personally we are convinced that many members of the society would gladly see a meeting held in the South, but there are often practical reasons that prevent their attendance at far distant shows and their vote is usually guided by such. If there are any Northern fanciers that hold any such notions as advanced by Dr. Lea as to a matter that had best be forever buried, we are not acquainted with them. The doctor has evidently forgotten the meeting held at Charleston some ten years ago.

***

Mr. T. E. Orr, editor of the National Stockman, poultry fancier and general all round good fellow, has added a new line to his already busy vocations, viz.: He will rid the hen houses of America of lice. Some fifteen years ago Mr. Orr prepared a lice killer that seemed to do the trick. Since then he has improved upon it and now has the "real thing" in that line. As he announces in his advertisement on our title page, trial packages will be sent to readers of the American Fancier. As the festive louse is now doing his most deadly work and will continue to do so for several months to come, Mr. Orr's proposition will not be out of order. So order.

***

A new business has been started at Waltham Cross, London, N., England, under the name, "Robert A. Colt, Limited." Our old friend, Colonel Colt, of Pittsfield, Mass., is the managing director. The firm is backed by a stock company. All the leading poultry supplies of the United States will be handled and featured, as well as the best supplies in England. The Colonel extends a hearty welcome to all visiting fanciers, and also assures those who are unable to cross the Atlantic that he will be pleased to execute any or all orders for stock they may entrust him with.

***

We learn with deep regret that James C. Moore, secretary of the Pittsburg Fanciers' Club, is dead. Mr. Moore was a most able officer, a thorough gentleman and fancier, and had a brilliant future ahead of him in business circles. The club and fancy at large suffers a severe loss in his death.

***

J. F. Crangle, manager of Valley Farm, has been on the sick list for some time, but in a letter received a few days since informs us that he is "on deck" again and getting ready for the Hagerstown and Pan-American shows. He reports about 800 fine chicks out and doing well and expects to land a bunch of winners in the Rock and Houdan alleys.

***

Mr. Crangle also reports the arrival of a lot of Faverolle fowls from France last week, imported by Mr. Thomas, proprietor of Valley Farm. A description of these fowls will appear in our next issue.

***

This reminds us that Mr. Thomas is making a study of French fowl and will in future issues of the American Fancier contribute articles on this subject. The first of these articles appears in this issue.

***

The July number of the Delineator, America's leading fashion magazine, is one of the finest issues ever published. The three color printing in the article on the Pan-American Exposition is exceedingly fine. These were printed from the plates made from the original water color sketches by C. Y. Turner, director of color to the Pan-American Exposition. All this delicate work was done at the Delineator printing office and at high speed. The edition is 625,000. Readers of the American Fancier should not fail to order a copy, as it will prove a most valuable souvenir.

Editor Davenport in the Poultry Star remarks:

"In a recent issue of the American Fancier, Editor Drevenstedt commented on our taking care of the old hen, for she pays the grocery bill, and wishes one could be sent to the Fancier's office. Well, we would be glad to make Brother Drevenstedt a present of one of these wonderful old hens, but we are afraid he would not take care of it, as he is always so busy. But, Mr. Editor, that old hen is not the only good thing we possess. Once when in the vicinity of Johnstown (whence all good things come) we found a kitten with seven toes on each foot. We possessed ourselves of this kitten and brought her home, and she has turned out a wonder, not only as one of the greatest ratters, but as one of the greatest fishers also. Near our home is a stream of water, and this cat has caught, to our knowledge, over fifty fish this spring, some of them weighing one pound each, and she brings them to the house while yet alive and lays them on the kitchen table. One day she caught six, two of them trout eight and nine inches long. She spots her prey and springs for it the same as she would for a rat, oftentimes going far below the surface. So, brother, you see it is not so hard for one poor editor to live, and if the brother is in need we have the old hen and one of the cats kittens with seven toes which looks exactly like the mother that we will make him a present of just for old time's sake. But he must promise to care well for them."

If Brother Davenport will send the trout stream along we will take the hen and the kitten. We congratulate the brother on possessing a feline angler that can catch the wily trout without solid or liquid bait.

***

We call the attention of our readers to the advertisement of the Woodlawn Remedy Co., New York City, which appears on the Belgian Hare and Pet Stock page of the American Fancier every week. The remedies offered are among the best that skill and experience can produce.

***

For the benefit of exhibitors at both Hagerstown, Md., and the Pan-American, Buffalo, we will state that a special train can be started at Hagerstown, 8:25 p. m., Friday, October 18, and reach Buffalo the next morning at 7:35, Oct. 19. For further information address John L. Cost, Hagerstown, Md.

$50.00 in Cash Prizes.

The American Poultry Journal offers $50.00 in cash prizes, which will be awarded for first, second and third best articles sent them not later than October 1st. First prize will be $25.00; second, $15.00; third, $10.00. Contributors may write upon either one of ten subjects, a list of which and full particulars regarding the contest being given in their July number. The winners of these prizes will be well paid for the little time required to write briefly what they know about the subject they select. A copy of the Journal, containing full information, will be mailed to any of our readers who make request for same. Address American Poultry Journal, 325 Dearborn St., Chicago, Ill.

A leading article in the July Magazine Number of The Outlook, which is its midsummer number, as the August Magazine Number is devoted to educational subjects, is "The Spirit of the New World as Interpreted by the Pan-American Exposition," by Hamilton W. Mabie. This subject, on which Mr. Mabie writes with his usual insight and charm, is profusely illustrated by reproductions from drawings of the beautiful architectural features of the Exposition. ($3 a year. The Outlook Company, 287 Fourth Avenue, New York City.)

Mr. Blunck's Views on Games and Game Bantams at New York.

Editor American Fancier: Mr. John Glasgow's write up of the Game and Game Bantam classes at the New York show in the March number of the Poultry Monthly has brought a hornet's nest about that gentleman's head, and the battle waxes warm between him on the one hand and the veteran Canadian breeders, Mr. John Crowe, of Guelph, Ont., and Mr. William Barber, of Toronto, Can., on the other. Each side seems to be able to hold their own in this battle royal, so that it is barely necessary for me or anyone else to mix up in the fray, but inasmuch as both sides have used my name in connection with their articles I perhaps may be excused for expressing my opinion on the matters brought out in the controversy and to suggest some ideas that were brought to my mind by Mr. Glasgow's write up, which I cannot help but consider as very injudicious. As stated in my article in the April number of the Poultry Monthly, I have found it very difficult to successfully raise Standard Games and have sunk considerable money in attempting to do so. I also know that the majority of other breeders have had the same experience, but everyone who has seen the birds of Mr. Fremont Chapin, of Oneida, N. Y., during the past two or three years is aware that he understands the trick of raising Standard Games, and the climatic conditions of Oneida are not much different than those of Johnstown. and he is entitled to full credit for his success, and Mr. Glasgow's remarks in regard to Mr. Chapin's birds at the New York show seem to be the most uncalled for statement contained in his article. The birds were passed upon by a competent judge and Mr. Chapin's Black Red cockerels were pronounced worthy of first, second and third prizes, and yet Mr. Glasgow states that "the only redeeming quality they possessed was their beautiful color." I will not quote the balance of Mr. Glasgow's criticism on Mr. Chapin's birds, but suffice to say that it was the worst roast I ever saw come from the pen of one breeder in regard to the birds of another, and one which could not help but injure the business of Mr. Chapin.

As I did not attend the New York show, I, of course, can express no opinion in regard to the quality of these birds, but I am assured by a gentleman from Johnstown who did attend the show, and who, by the way, is a good judge of Games, that Mr. Chapin's birds were as fine as he had ever seen shown in New York. This was the opinion of an unprejudiced observer, while Mr. Glasgow was an exhibitor in the same class, and while I consider my Scotch friend as fair minded as anyone in the fancy, I do not consider him or anyone else competent to express an unbiassed opinion of birds in classes where they are interested. Mr. Chapin paid his entrance money at New York and was entitled to all the credit due him from his winnings, and it is a most reprehensible practice for an interested party to be allowed to rip a competitor up the back the way it is frequently done in our poultry papers. Legitimate criticism of the awards of a show in the poultry papers by a disinterested person cannot be objected to, but so-called write-ups of the awards of a judge of classes in which the writer is an exhibitor are unfair and should be put a stop to, for no matter how impartial the writer may wish to be he cannot help but be prejudiced in favor of his own birds and his writings will show a bias injurious to his competitors.

Mr. Glasgow is manager for Havemeyer Bros., proprietors of Mountain Side Lofts, and naturally in writing up classes he would be anxious to speak as well as possible for the birds of his employers. This inclination must be apparent to any unprejudiced reader throughout the entire write-up of the New York show. Mr. Glasgow certainly cannot be accused of being over modest, for in his reply to Mr. Crowe in a recent

GILSEY HOUSE
BROADWAY, COR. 29th ST.
NEW YORK CITY.
...EUROPEAN PLAN...
The most conveniently located hotel in New York. Entirely modernized and refurnished; ranks with New York's best hotels. Cuisine and service unexcelled.
E. O. ROESSLE, Prop.
Heslach Farm, Albany, N. Y.
349tf

number of the American Fancier he says: "I am in control of the most extensive and best stock of Game Bantams in America today and am prepared to pit my birds raised under my supervision against any other breeder's he likes to name and show them in a condition that would dispel the idea he entertains that I have yet to learn my business." This certainly is a broad statement and I am inclined to question its accuracy, notwithstanding that Mr. Glasgow has had at his command the millions of the Havemeyers with which to buy the best birds produced in the past in England. With such unlimited means with which to supply him with breeding stock, I do not think that the results attained by Mr. Glasgow justify him in crowing so loudly over the rest of us poor fellows. I have never hesitated to show against Mr. Glasgow's Havemeyer birds and have always succeeded in being, at least to a small extent, in the money, and am ready to meet my old friend again when the proper opportunity offers, for one prize won against Mr. Glasgow affords me more pleasure than a half dozen against anyone else, for I know that I am up against the real thing then.

The way my name has been used in connection with the arguments, and the further fact that I exhibited at Chicago this year, might lead to the erroneous impression that I agreed with Mr. Chapin in his views in regard to the entrance fee at New York. The $2 entrance fee had nothing to do with my showing at Chicago, as I believe the management of the New York show are entirely right in charging what they do, but I went to Chicago because I am a member of the National Exhibition Game and Game Bantam Club and they held their exhibition there. I had never shown with them, although urged to do so, and wished to encourage this western organization in their labors in behalf of Exhibition Games and Game Bantams. I found the members of this club congenial gentlemen, who are enthusiastic over their birds, and they are doing a good work in the West to bring these varieties into popular favor in a section of the country where there has been very little demand for Games and Game Bantams heretofore. Right here I might mention that the exhibit of Black Red Games at Chicago of Mr. J. C. Pratt was a forcible illustration that there are breeders who can successfully raise Exhibition Games. Mr. W. H. Thompson, of Collinsville, Ill., also showed a fine string of Duckwings of his own raising in the pink of condition.

I think it was unfortunate that the New York and Chicago show dates conflicted this year, for some of our Western breeders should show their birds at New York and become members of the American Exhibition Game and Game Bantam Club, as they have stock fit to show in the closest competition.

I believe that Mr. Glasgow is honest in the opinion he expressed in his review of the awards at New York, but it seems to me that he should see the impropriety of an interested person reviewing for publication the work of a judge, and while I would as soon accept Mr. Glasgow's judgment as any man in the country on the merits of a class of Games or Game Bantams in which he is not an exhibitor, I think he is hardly qualified to pass judgment on classes when the circumstances are such as they were at New York. Mr. Glasgow has always contended that no man should judge classes where he is interested, even to the extent of having sold a bird to an exhibitor, and I have agreed with him in this contention. If this is so, an exhibitor is certainly incompetent to pass an impartial criticism upon the work of a judge, and no poultry paper should allow it to be done.

A. E. BLUNCK.

Johnstown, N. Y.

Buff Leghorns at the Pan.

Editor American Fancier: As the eastern vice-president of the American Buff Leghorn Club, I wish to urge upon every breeder of Buff Leghorns in America, and especially those in the East, the importance of making a large entry of this popular breed at the Pan-American poultry exhibition. Thousands upon thousands of people will see our birds, and we can do nothing better at this time of the year than to begin to get in shape for this grand event and show the poultry fraternity in what esteem we hold the breed. My time is too limited to write each breeder personally, and I take this opportunity of again urging upon all the necessity of joining the club. We want you all, not just a few of you, but every breeder of Buff Leghorns in America to write to George S. Barnes, Battle Creek, Mich., the club secretary, for membership blanks and follow it up by becoming members. Buffalo is pretty centrally located, and I believe it would be a good place to hold the club meeting and get in condition to do better and more effective work for the Buff Leghorn than ever before. Mr. George Burgott, Lawton Station, N. Y., superintendent of poultry at the Pan-American, will gladly furnish all Buff Leghorn breeders information in regard to making entries, time of closing of same, etc.

HARRY M. LAMON.

Watertown, N. Y.

The midsummer fiction number of the July Cosmopolitan contains the best story Bret Harte has written in a long time. The well-known Jack Hamlin is the hero, and he will be eagerly welcomed back by the public. Desperado and gambler that he is, theoretically we ought not to like him, but he has that fine courage too rarely met with in real life or in fiction, and those who read "A Mercury of the Foothills" will probably lose sight of his faults in following the events which take place upon "that heaven-kissing hill." Katrina Trask's story in the same number should be read by every woman. It is one of those homely tragedies constantly going on in modern society. It is probably the cleverest piece of work Mrs. Trask has ever done. R. K. Munkittrick's quaint New England coast yarn has a breeziness about it that makes it really refreshing. The July instalment of Egerton Castle's story begins to raise the curtain on the inevitable ruin which the Duke of Cluny's weakness must bring on those who love him.

THE AMERICAN STANDARD OF PERFECTION.—Describes all recognized breeds of fowls. Indispensable to every breeder and fancier of thoroughbred chickens, ducks, turkeys and geese. Latest 1899 revised edition. Price, one dollar. Free to anyone sending us two yearly subscribers at one dollar each.

MILLIONS IN OIL
California Again Attracting the Attention of the Civilized World. :-: The Gold Fever of 1849 Eclipsed by that of Oil in 1901...
THE MIDWAY OIL COMPANY,
OF OREGON,
Lands Situated in the World Famed Sunset MIDWAY DISTRICT.

This Company owns and controls over 2000 acres of selected oil land and is conceded by all who know anything about the Oil Companies of California to be one of the best, largest and strongest in the Golden state.

DEVELOPMENT NOW UNDER WAY.

The Midway Oil Company has two wells started, each down about 800 feet, and two other wells just started. Work on them all is being pushed with vigor.

HAVE LEASED THREE EIGHTY-ACRE TRACTS.

The Company has leased three 80 acre tracts, contracts call for immediate work and well will be drilled at once. There is no doubt but what at least 7 rigs are now steady at work on the Midway Co. property.

NO SPECULATION IN THIS.

An investment in Midway stock is an investment without any speculation whatever as to loss. The only speculative feature being how much more will you make than the amount figured on.

LANDS ALONE VALUE AT $2,000,000.

There are guarantees top of guarantees for investors in this stock and it may all be withdrawn from market any hour.

OFFICERS AND DIRECTORS.

The men in charge of this company are able and honest, and have means to develop the property without selling stock. However, for a time they offer

TEN THOUSAND SHARES FOR SALE AT PAR!!

$1.00 per share. A few Portland business men who know the Officials took 50,000 shares. The company has no prospectus, they did not intend to sell stock. All information, reference, etc., will be cheerfully given upon request.

BANKERS.

WELLS, FARGO & CO'S BANK, - - - - 63 BROADWAY, NEW YORK.

OFFER 200,000 SHARES TREASURY STOCK AT $3.00 PER SHARE.

THE CALIFORNIA KING GOLD MINE COMPANY owns 23 claims in Picacho Basin, four miles from the Colorado River, in California, and twenty miles by direct road from Yuma, Arizona. . . . . .

DEVELOPMENT work has been in progress for six years, and more than ten thousand feet of shafts, drifts levels and cuts have been completed and paid for.

Upwards of fifteen million tons of ore are now ready for the mill, all of which will be mined by open cuts at a nominal cost.

A CONTRACT has been entered into for the erection of a mill and cyanide plant capable of handling 1,000 tons of ore daily, which will be completed this year. The Directors guarantee that this plant will be placed in operation, regardless of the amount of treasury stock subscribed. The net profit after commencing work will exceed $60,000 a month, and probably reach $100,000 a month within a year. The ore in sight will supply such a plant for more than forty years, assuring an annual return of 20 per cent or more on the investment.

There is no promotion stock. No salaries to officers. Every dollar realized from the sale of stock, goes into the treasury to pay for the plant. Reports of J. Ralston Bell, London; William A. Farish, Denver; Emerson Gee, Denver; P.C. Du-Bois, Berkeley, Cal.; J. L. Shepherd, and others, all eminent mining engineers, strongly recommend this property.

This is an Opportunity to invest in a large Mining Property of known value, managed by experienced mining men in the Interest of stockholders

Application will be made for listing the stock on the Boston Stock Exchange. Prospectus and any information desired will be furnished on application. Subscriptions received by

The California King Gold Mines Co., 32 Broadway, N. Y. City.

Washington, D. C., Show.

Editor American Fancier: The Washington Poultry, Pigeon and Belgian Hare Association will hold their first annual show on November 19 and continue to November 23 inclusive. We are more than glad to announce to the fanciers that we have secured the Masonic Temple. This hall is right in the heart of the city and is one of the best lighted halls in Washington, standing as it does on the north-west corner of Ninth and F streets. We are preparing for one of the largest shows ever held in Washington, and we feel confident that we will have a full string of poultry, pigeons and hares. We propose to have a hare stew every day from 12 to 2 o'clock, so the boys will not have to go out to their lunches. We expect to have the largest list of specials ever offered before in Washington and will have competent judges employed to judge.

JOHN M. ALLEN, Cor. Sec.
Washington, D. C., June 28, 1901.

Origin and History of Cornish and White Indians.

The origin and history of the two popular varieties, is very interesting, and I feel honored in having had this subject assigned to me. But an apology is due the readers of Poultry Monthly. As soon as I learned the plans of the editor and the secretary of our club, I immediately wrote to a number of well-known fanciers in England for information on the origin of the Cornish Indians, and also to Abbot Bros. regarding the production of the English strain of White Indians; but at the present writing, I have received but one reply. Knowing that these notes must reach the publishers promptly, I have decided to use the chapter on the "Origin of the Indian Game" in Mr. G. T. Whitfield's (England) work on the Cornish Indian which follows:

"Up to recent years, the Indian Game were, in England, confined to Cornwall and Devon, reveling in the hills and dales of these two fair counties, which veritably are ideal homes for poultry, and I believe I am not alone in saying it is impossible for one living in the Midlands and North of England to get that sheen and tightness of feather on their birds, in obtaining which the climate there materially assists. One can only conjecture as to the origin of the Indian Games—but without doubt the Aseels, the oldest and purest race of domestic fowl, used by the native Rajahs and princes of Northern India for fighting purposes, which has been carried on there from the earliest ages, said to have been introduced into England under the name of Indian Game, as being from India—appear to have been the parents of the present Indian Game, possibly crossed with the Malay, and which was then improved by English breeders; for some years the two breeds seem to have run in conflict under the same title of Indian Game, when the original breed, by fresh importations, took the name of Aseel, by which it was known in India. The following testimony on this subject by Mr. Montressor, copied from Poultry, is valuable:

"'Aseel'—this is the name by which the breed is known and styled in India, and has been adopted in England for some years in order to distinguish it from that which is designated 'Indian Game' (a breed not known to the natives of India), and originated in England by the late Sir Walter Raleigh Gilbert upwards of 60 years since, when he imported from India some red Aseel into Cornwall, and there crossed them with the Derby black reds. Sir Walter (then General) Gilbert personally gave me this information in 1846."

The present breed has been known for at least 30 years by the name of Cornish Games, and Mr. Lewis Wright, in his well-known book on Poultry speaks of there being a fine and numerous class at the Plymouth Show in 1870, each bird showing an element of Malay blood. They were well known then among the Cornish miners, and used by them in the old fighting days, but were never of much use for spurs, being too heavy to rise. Some 15 years ago, they were improved by the introduction of Black Indian Game, thus producing larger specimens and male birds with solid black breasts; but of whatever origin they were, it is now a well established breed, for no variety breeds truer for shape and feather.

I have read that the Indian Game club of England was formed in 1886, and the first day of December of that year, a Standard was prepared and adopted for the breed. It was re-adopted in 1891, and I think is still the recognized Standard in England. This Standard is much like our present American Standard, but allows dubbed males and "one or more narrow lacings" in females. I am more familiar with the Cornish in America. It is probably the general impression that the first importations of fowls and eggs were made in the spring and summer of 1887, by Mr. H. S. Babcock and Dr. H. P. Clarke, but that date is over nine years later than the advent of the Cornish Indian in America. In September, 1877, Mr. Adam Thompson imported a trio, which is quite likely the first importation of Cornish to America. I am in possession of feathers from the three birds. Mr. Thompson writes that the male was dubbed, but bred good combs, weighed 10 lbs., and was a fine shaped specimen with splendid color and undercolor. The feathers Mr. Thompson has sent me show that this bird had a better stripe in hackle than the majority of males seen in our show-rooms at the present day, and few of our birds now have better saddle feathers. One of the hens was light colored with a large open center of bay and one narrow lacing around it, the same as the single-laced females exhibited in England to-day. The other was darker and the breast feathers quite evenly marked with double and triple lacings, and probably as good as the average triple-laced specimens now being bred. Mr. Thompson's next importation was in January, 1887, and consisted of two males and eight females. The males were very good in shape and color, and away up in weight. One female was single laced and the others were double and triple laced. Then came Mr. Babcock's importation of eggs in the early spring of 1887, and the importations of fowls received by Mr. Bab cock and Dr. Clarke later in the season. Mr. Thompson again made an importation of 15 birds in 1888, and in January, 1889, Mr. George T. Whitfield, of Market Drayton, England, sent a pen of Cornish to the International Exhibition at Buffalo, N. Y. This pen was purchased by C. A. Sharp & Co., who became identified with the breed in this country. That same year Messrs. Babcock and C. A. Bowman each made importations. The next year, 1890, saw a great increase in the number of importers and importations, Messrs. Sharp, Bowman Babcock, August D. Arnold and P. A. Webster being among the importers. Thus it seems Mr. Thompson was the first to import fowls, and has bred them ever since; Mr. Babcock was probably the first to import eggs, and in point of number of fowls, Sharp & Co. outrank the others, having had some 500 to 700 imported birds in their yards, while Mr. G. A. Loth claims to have bred them exclusively the longest, having bred no other fowls than Cornish Indians for about 14 years.

At the New York show in 1890, the American Indian Game Club was organized with Mr. Babcock as President and Mr. O. K. Sharp as secretary and treasurer. They were re-elected at the annual meeting at New York in 1891, and Mr. Sharp reported a list of over 60 members. At Philadelphia, January 11, 1892, at the annual meeting, a Club Standard was adopted. It allowed "one or more narrow lacings" in females and dubbed males to compete with undubbed males, but from the score of the dubbed males the full value of the comb, in points was to be deducted. In 1893, the Cornish Indian was admitted into the American Standard of Perfection with practically one important change, i. e., "two or more narrow lacings" in females. In 1898, the Standard of Perfection was changed to "two narrow pencilings" exclusively, which seems to suit the majority of fanciers, and in all probability will remain unchanged. The out look is very encouraging.

Indian Games have been bred continually on the increase since their general introduction, but as predicted, there was a decrease in the number of importations from 1891 to 1896. During those five years, American breeders had plenty of new blood, and unfortunately devoted too much attention to producing exhibition colored males, with the result that the American-bred females are generally too dark, and both sexes have lost to a greater or less degree, the thick-set, blocky build so characteristic of the best English strains. Unfortunately, the long-legged, long, narrow-bodied males with black breasts were allowed to win over their thicker set and sturdier brothers. The English say the American birds lack substance, that is, they are not thick enough and wide enough for their length and length from neck to tail. It seems to me American breeders would do better by breeding for shorter feather and heavier and lower type, and pay less attention to color, especially black breasts in males. In England, Cornish Indians rank high as practical fowls, and with such great table qualities, it is only a question of time when they will be much more generally bred in America. It is interesting to note the large exhibits of these birds in our best shows.

THE WHITE INDIANS.

Not having heard from Abbot Bros., who claim to be the originators of the English White Indians, I cannot now give any account of their origin further than to say I have read of a creamy white fowl being used. I am in receipt of a letter from Mr. P. A. Webster, formerly American agent for Abbot Bros.' White Indians, in which he says his first importation was a trio imported 10 years ago. He adds that they were exceptionally great layers, had the size, type and characteristics of the Cornish, and were pronounced "fine" by visitors to his yards. Mr. Sharp, it seems, has not seen fit to give us an account of the production of his "Majestic" strain of White Indians, but we know he did not set about to produce any White Indians before January 1889. However, in 1892, if I am not mistaken, he exhibited some White Indians of his own production, at Philadelphia, and also made a creditable exhibit at New York in 1894. He certainly produced some grand birds, and in 1897, sold 10 lb. to 12 lb. males and 6 lb. to 8 lb. females, the equals of the best Cornish Indians.

But Messrs. Sharp and Abbot Bros., were not the only originators of the White Indians. I have just received a letter from Mr. C. J. Daniels, Toronto, Canada, who produced some good White Indians by crossing White Malay males on Cornish Indian females with good pea combs and of the best type. The birds were carefully selected and were very short in feather, extra good in shape and carriage, with rich yellow legs. Other breeders may have produced their own strains by using White Malays or White Aseels as a cross on Cornish. Others may have gone outside of the Game family entirely for at least one cross. Some of the best specimens ever bred have a percentage of Malay blood in them, and it matters little how they were produced, for cross them with any other fowl, and the White Indian characteristics are predominant in the offspring, a very creditable point for a new variety. I have not seen and have never succeeded in producing any 9 lb. females, but with me it has been a very easy matter to get May hatched males to weigh 10 lbs. to 12 lbs. each. It takes an extra fine Cornish specimen to score higher than, if as high as, the best White Indians. They were admitted into the Standard of Perfection in 1898 and no doubt they will be supported by a White Indian Game Club in the near future. They have many admirers, and I predict a great future for them—W. S. Templeton in Poultry Monthly.

1500 Incubator Chicks
FOR SALE WEEKLY.

Price $15 per 100 from my laying matings, see below. 32-p. Des. Cat. Free
BREEDERS, EXHIBITORS AND SHIPPERS OF
Line Bred (Since 1892) **Exhibition Stock. Line Bred** (Since 1888) **Laying Stock.**
WHITE LEGHORNS, WHITE ROCKS, BLACK MINORCAS,
BARRED ROCKS, WHITE WYANDOTTES, LIGHT BRAHMAS.

EXHIBITION.
$3.00 for 12 Eggs.
$5.00 for 24 Eggs.
$15.00 per 100 Eggs.
The above are from my best matings. I mate no pens to produce prize Exhibition Cockerels and Pullets from same pens.
Elegant deseriptive catalogue free.
The Kind to Exhibit.

LAYERS.
$1.00 for 12 Eggs,
$8.00 per 100 Eggs.
$70.00 per 1,000 Eggs.
The above stock bred for years for egg production. Birds true to shape, color, markings, and of good size. Mated with the laying blood males, will surely produce.
The Kind to Lay Eggs.

MARKET.
$3.00 for 50 Eggs.
$5.00 per 100 Eggs.
$50.00 per 1,000 Eggs.
Above stock bred more especially for market, etc. Females off in size, shape, legs, comb, eye, tail, etc., mated with extra large males will produce right for broilers, etc.
The Kind to Market.

Special Crops For Poultry.

Where poultry is raised in large numbers on the so-called poultry farms it will pay well to put in special crops to supply the required green food. Plenty of greens are essential in late fall and during winter, if best egg results are to be attained. There are a number of things that are suitable to plant for the purpose. If there is a field that the fowls can have access to during winter—that is, if it is located near enough to their quarters—crimson clover planted about the middle of August will make a splendid winter pasture and will supply required nitrogen for egg-making to form a balanced ration with other food given. The clover can be turned under early in May or before with great benefit to the land, so the crop can be made to serve a double purpose. Rye can be used in the same way, but is not considered as valuable for either purpose as the crimson clover. Of the root crops mangels are excellent, as they can be used for greens and may also be boiled and utilized to mix with the regular morning meal. Turnips and rutabagas are also good poultry crops. If the turnips are planted near the henhouse it is a good plan to leave some of the turnips in the ground. The hens will take great delight on favorable winter days in picking at them, and the exercise will do them good. Farmers who do much truck gardening have considerable waste that is not marketable that could be used in the poultry yard with much profit. Poultry that are supplied during winter with an allowance of bulky green food do much better than when the diet is mainly grain. In fact, the aim should always be at all seasons to provide the flock each day with bulky food of some kind. Close observation will show that hens confined to a limited space are always eager for bulky food. They will eat dry shattered clover tops and sometimes dry grass ravenously. There is plenty of time to put in poultry crops, and it will be a good investment to do it. —Baltimore Sun.

HAMILTON MICKLE, GENERAL AGENT, FORT PLAIN, N. Y.

Adams, Mass.

Editor American Fancier: The Adams Poultry Association has regularly organized and adopted a set of by-laws to govern it. The officers chosen are as follows: President, F. I. Wilder; vice-president, George Grant; treasurer, M. N. Lothrop; secretary, H. M. Ford; corresponding secretary, A. W. Safford, all of Adams, Mass. The association, after giving two annual preliminary shows, has aroused interest enough to establish itself regularly. It is in good financial condition, owns 250 new exhibition coops, &c., and has some money in the treasury; has no liabilities. The annual poultry show will be held on Tuesday, Wednesday and Thursday in the second week in January each year, the next show being on January 7th, 8th, 9th, 1902. Mr. C. A. Ballou, of Worcester, Mass., will judge the show. A. W. SAFFORD, Cor. Sec.

Adams, Mass., June 27, 1901.

Turkey and Partridge.

A report from Monticello, Sullivan county, N. Y., says: A peculiar and unprecedented friendship has been found to exist between a turkey and a partridge near Monticello. Herm Cooney, who resides on the shores of Silver Lake, has a small flock of turkeys. The queen of the flock is an especially fine specimen and has always proved a perfect domestic model, but for a week past she has been acting strangely, leaving home in the morning and not returning until late in the afternoon. Affairs grew gradually worse and finally reached the climax when she did not return home at night. Mr. Cooney, noticing the absence of his prize turkey, organized a searching party composed of himself and Patrick Callery, and started out to search the woods. The search had progressed for some time when they discovered the missing turkey, and by its side was a large partridge. The two were covering a large nest and seemed perfectly contented. They were scared off and thirteen partridge eggs and nearly as many turkey eggs were found in the nest. If the partnership between the turkey and the partridge continues to be agreeable, Mr. Cooney intends to do an extensive business in partridge and turkey raising next year.

Secretary Moore Dead.

Editor American Fancier: It is with profound regret that we inform the readers of your valuable paper, also exhibitors at our late shows, that our former secretary, James C. Moore, is dead. He died May 21st of typhoid fever.

Our association held a special meeting on May 29th and passed resolutions, also appointed a committee to draw up letter of condolence to be mailed to his father, who is president of our club.

James Moore, although only a young man, was a true fancier in every way, honest and faithful in his duties, and ever ready to do a favor for either friend or exhibitor.

The Pittsburg Fanciers' Club certainly feel their loss.

JOS. P. HILLDORFER,
Member Pittsburg Fanciers' Club.
Pittsburg, Pa., June 25, 1901.

"Ed." Blair, of Cadmus, Kansas, known locally as "the melodious poet of the Osage," has written the following lines on the hen:

Cackle, cackle, Plymouth Rocks,
Ye can have the waggon box,
'N the smokehouse, n' the barn,
Take 'em—we don't care a darn.

Cackle here and cackle there,
Lay your eggs just anywhere,
Every time ye lay an egg
Down the mortgage goes a peg.

Cackle, cackle all the day,
Who kin find a better way
Fer to git ahead again
Than to cultivate the hen?

Fancy Pheasants and Their Allies.

(Continued from June 22d.)

PEAFOWL

The aristocracy of the feathered tribe are undoubtedly the Peacocks; in no other birds do feathers reach such an extraordinary development, and none have been so long or so universally admired. So I shall take them first, and proceed to discuss the other more striking members of the family before addressing myself to its less exalted representatives.

Peafowl are, it is scarcely necessary to say, large birds of a rather reachy build, with very small, crested heads and large, powerful feet. As a matter of fact, both in his Indian home and in Europe the Peacock's feet are supposed to be a wholesome check upon his otherwise overweening pride; but, after all, they are not worse than the turkeys, and he must have long, strong legs to carry his chief glory, the train, well off the ground. It is hardly necessary nowadays to explain that the train is not the real tail, but only the greatly-developed upper tail coverts. The true tail in Peafowl is only moderately long and rounded. The sides of the face are bare of feathers in both sexes, and the crest appears very early in the young. Only two true species of Peafowl are known, but one produces a "sport" of surpassing interest, which may almost rank as a third.

THE COMMON PEAFOWL.

In the common Peafowl the crest is fan shaped, each feather being a bare shaft with a small fan-shaped portion of web at the tip; the bare part of the face is white, and the neck feathers are loose-edged and blended into one uniform surface, as in most birds. It is unnecessary to go into full details as to the plumage of such a well-known bird, but it should be noted that in the male the neck and breast are rich blue, the back coppery-green, with the feathers edged with black and scale-like; the wings mostly pale buff, coarsely pencilled with black, except the flights, which are cinnamon. The flanks are deep green and the belly blackish-brown, contrasting with the pale drab thighs. The real tail is brown and the train, as everyone knows, metallic copper-and-green with blue-and-purple "eyes" at the tips of the feathers.

The hen is drab above, with a dark brown head and neck touched with green; her tail is dark blackish brown, and her flanks and underparts below the breast pale dirty buff. The bill and feet in both sexes are dark horn color. Young Peacocks at first resemble the hens, but can be distinguished by their cinnamon flights, and the neck soon becomes blue; they spread their tails and try to show off long before the train grows; the plumage is not perfect till the third year. This Peafowl's native home is India and Ceylon; but it was introduced into Europe many centuries ago, and is now known in all civilized countries. It is so far domesticated that it can be allowed full liberty, and is perfectly hardy in England, roosting out-of-doors in all weathers: at the same time it bears confinement well, but is too noisy a bird to be kept near a house. Although Peacocks are not much given to fighting with each other, they are bold, some what vicious birds, and may at times be dangerous to weaker creatures and even to children, and they also have the reputation of being very destructive in gardens. But a vicious Peacock can easily be got rid of, and, as to his horticultural misdeeds, it must be remembered that he is a whole flower garden in himself! In his own country he is sacred, and it is stated that when Alexander the Great invaded it, he forbade his soldiers to kill the wild Peafowl, so much was he struck with the beauty of the birds; and we know also that the bird fanciers in Greece thought a great deal of them when they became obtainable there—some are said to have travelled from Sparta to Athens to get even a sight of the splendid novelty.

Nowadays the Peacock is rather a bye-word than otherwise, but I hope there will always be sufficient good taste among us to ensure the cultivation of the first and finest of fancy birds. The Peahen should be allowed to manage her own chicks; she is a good mother, and the young need more "mothering" than ordinary poultry, as they remain with her much longer. They are very good eating, and are often shot for the table in India, though old birds are only fit for soup—a Peacock is supposed to be the proper foundation for "Mulligatawny." It takes a good high fence to keep Peafowl in, even if their wings are cut; but though their flight is more regular and leisurely when fairly launched, than that of most Game birds, they cannot keep it up long and may be ridden or even run down in the open.

It may be mentioned as a great point in the Peacock's favor that he kills and eats young snakes, even poisonous ones, so that people residing in adder-stricken localities should keep these birds as an aid to the extermination of these undesirable reptiles.

Although the form of the Peacock does not seem liable to variation, this is not the case with the coloration of the species. Most people have seen the white variety, which, if clean, has certainly a delicate beauty peculiarly its own. It is much appreciated in India, and Mr. Rutledge constantly imports it. He tells me that he knows of a Rajah who has stocked his jungle with the breed. Pied birds are also seen, but I can't say I think much of them from an æsthetic point of view. A Buff variety could also probably be raised, for Buff hens have occurred in the wild state, and Mr. Rutledge once obtained and sold to the ex-King of Oude—a very keen bird fancier—a male of the color of a new copper coin. This was evidently the Buff form of the cock; it must have been a most splendid bird. But the most interesting variety is that which has even been given rank by some authors as a species, under the name of the Japan or Black-winged Peacock.—F. Finn, B. A., F. G. S., in Feathered World, England.

(To be continued.)

Black Bantams.

Yes!
"We're all right."
Black as Egypt's night of old,
Of which in fable we are told.
To glistening ebony burnished bright
Add greenish shimmer.
Then
"We're all right."

Well!
"Just take your choice."
We grow as Black Cochins and Black Rosecomb,
As Black Polish with whiskers and head capped with dome;
Black Booted are scarcer and also Black Game,
Black Silkies bring honor and wealth and fame.
So, then, be wise!
"Just take your choice."

JOHN G. QUINIUS.

Dayton, Ohio.

Voitellier on the Origin of the Houdan.

[Translated from the French by JOSEPH B. THOMAS, JR.]

Certain wise ones have said that the Houdan was only a manufactured breed arising from the crossing of the Creve Cœur and the Dorking. In that statement we see two errors. We do not claim the Houdan to be a primitive breed whose ancestors can be traced to the savage state, but we are of the opinion, seeing its state of perfection and merits, that it constitutes a true breed equal to the Creve Cœur and the Dorking, whose offspring it could not be, for it possesses none of their characteristics. Let us try to demonstrate this. At first sight the Houdan, with the exception of the color, resembles the Creve Cœur, but there is an essential difference in other respects. The Houdan is calm and tranquil and is contented with small quarters. Specimens raised in enclosures become as fine as those raised on a range. With the Creve, on the other hand, is needed exercise and a broad range. Raised in a small enclosure, they are almost always sick and never arrive at the same excellence; they especially need a sandy soil and broad fields.

The Houdan, exported to all the countries of Europe and even to America, acclimatizes itself well and preserves its race type.

As to the shape, the difference is also large. The one has five toes, the other four. The Houdan hen is longer; her crest, instead of falling and hiding the eyes, is well raised on the top of the head, and while just as large, appears less heavy. The comb is also different. On the whole, we can find no great analogy between the two breeds.

Let us now see if there are some points in common with the Dorking. The only point of resemblance is the foot, but that one similarity need not prove a kinship. As to the color, there is no resemblance. The crests are entirely dissimilar. The Dorking has no sign of a crest nor of beard. The hen is a good setter. The Houdan hen hardly ever sets. Here, too, we find no similar points.

Stearns New Model No. 7

Ball Bearing Bone Cutter

Back Geared Three to One.

It is geared to save power, making it the easiest running, fastest cutting bone cutter ever built. It will cut anything a fowl will eat—green or dry bone, gristle, meat, corn or vegetables. Self-regulating. *It cannot be clogged.*

Green cut bone brings the young chick to maturity quicker than any other food. Our book, "How to Make Poultry Pay," explains how and why. Sent *free.*

Box 19, Syracuse, N. Y.

The New Woman In Poultrydom.

An exchange printed down in Matteawan, Dutchess county, tells of a pink tea party rooster of that village that has undertaken the job so dear to the heart of the clucking old hen and is caring for the eggs beneath him in first-class style. Another peculiarity in connection with the curiosity is that the name of the Miss Nancy rooster is Hatch. Now then, if that rooster is the father of those eggs, and also succeeds in bringing forth chickens, who will be the mother of those chicks and what will be the status of the rooster? In keeping with the foregoing, I swipe the following from my friend Allen's paper, the Canajoharie Radii:

"Andrew J. Dillenbeck, of Palatine, has a turkey gobbler which has taken possession of a nest of eggs, and has been setting thereon for the past ten days. What will become of the prospective motherless family is what is interesting Mr. Dillenbeck."

This new woman business, it appears, is going too far. What can we consistently expect that the future will bring forth, now that roosters and gobblers have been compelled to swing themselves into incubators? After what has occurred, I will not be surprised if some men quit playing poker and stay at home nights for the purpose of darning socks. Topsyturvydom seems to be in sight.—The Sifter in the Fort Plain Standard.

—A new magazine called The Sportsman will be issued July 1. It will be devoted to cycling, yachting, hunting, fishing, aquatics and all branches of college sports and general athletics. It will be of the standard magazine size and will contain upward of 64 pages of reading and illustrations each month Contributions having a sporting basis and material suitable for illustrations will be welcomed by the publishers, The Sportsman Publishing Company, Pulitzer Building, New York City.

GILBERT'S NEW PIGEON BOOK.—The latest and best book devoted to pigeons. Thoroughly American and up-to-date. The author, Major F. M. Gilbert, is world famous. Handsomely bound in cloth. Price $1.00. Free to all sending us two new subscribers.

THE COSMOPOLITAN.

Seldom has a better chance for "stay-at-home traveling" been offered than in The Ladies' Home Journal for July. From West Point, as pictured by George Gibbs on the cover, readers may go with W. L. Taylor to see "A Busy Boston Street at High Noon"; next try "Goin' Fishin' with Joe Jefferson in Florida"; then travel out West with Ernest Seton-Thompson to see "The Mother Teal and the Overland Route"; next go along the Atlantic Coast to find out how the places "Where Our Country Began" look to-day; then seek Northern Michigan to hear "The Story of a Maple Tree," by William Davenport Hulbert; next visit an Eastern magazine editor's office and enjoy the good-humored raillery of "The Case Against the Editor," by Edward Bok; and finally see what "The Country of Sheridan's Ride" looks like nowadays. There are many other articles of equal interest on various subjects. By The Curtis Publishing Company, Philadelphia. One dollar a year; ten cents a copy.

PIGEONS.

Additional Pan-American Judges.

Two more well-known judges have been added to the list who will officiate over the pigeon department at the Pan-American Pigeon Show, October 21st to 31st, 1901. They are Major F. M. Gilbert, Evansville, Ind., and Mr. Chas. F. Wagner, Toronto, Canada. This gives us a total of fourteen pigeon judges, every one well-known and a large majority considered the most expert judges in America to day. That the pigeons will be well judged at this forthcoming great show goes without saying, and these two additions will strengthen the already best list of judges ever announced for a show in this country.

Of F. M. Gilbert, very little need be said. No fancier is better known by all classes than Mr. Gilbert, for nearly forty years he has been one of the leaders in all things pertaining to the breeding of fancy pigeons. He has always been a stanch supporter of shows and the pigeon press, and articles from his pen are always full of useful and instructive points for the veteran as well as the amateur. As a judge no one will ques tion his ability to handle any variety that may fall to him. As a specialist on Fantails it is doubtful if any fancier or breeder in America can give Major Gilbert any points, and while as yet it is uncertain who will handle this variety at Buffalo, he would in all probability draw the largest entry of Fans yet seen at any show in this country. Some fanciers are more anxious for Mr. Gilbert to show than to judge in the Fan tail section, as they realize that his birds are worthy the competition of the best in the land and every large loft should be represented.

Mr. Charles F. Wagner, of Toronto, while not so well-known by the later day fanciers in America is well remembered by fanciers of several years standing, and his following in Canada is very strong up to the present time. We well remember when Mr. Wagner was a regular attendant at all the leading shows in this country. He has, in the past, done considerable judging in America and as an exhibitor has shown some very high class specimens of several varieties. As an all round judge, Mr. Wagner will not be found wanting and his selection will bring a full entry from across the border. C. E TWOMBLY,
Supt. of Pigeons.

Pigeon Manure.

Although we were aware that pigeon manure was valuable from the fact that our lawn and field was greatly improved by its use, we did not realize its full value until we received the result of a recent test made at the Maine Experimental College, Orono, Me., by Prof. Chas. D. Wood, which was as follows: 4 per cent nitrogen, .41 per cent total phosphoric acid and .98 per cent total potash. There are but a few commercial fertilizers now on the market that actually contain more than 4 per cent nitrogen, which is most valuable in producing a good crop of hay, and keeping the lawn looking green from the time snow leaves the ground until it comes again in the fall. This pigeon manure will do for a lawn and it will double an ordinary hay crop. Unless the manure is clear, more should be spread to the acre than of commercial fertilizer, but one barrel will go as far used as top dressing, as a horse load of common barn manure. Just what its value will be for hoed crop we are unable to tell from our experience, but pigeon breeders in Massachusetts have no trouble to sell the cleanings of their lofts to gardeners at $1 a barrel, while those who take the pains to collect the manure clear of nesting materials, grit, etc., find a ready market for it at 65 cents per bushel at the tanneries.

It may be surprising, but nevertheless true that at least two barrels or more of manure could be collected in a pen of 20 to 25 pair of breeders during the year. Pigeon manure should be kept dry and separate from stable manure. For the comfort of the pigeons and welfare of the business each pen must be cleaned out once a month and nest boxes refreshed as needed, or every time a pair of youngsters leave the nest.

We use feed boxes and put no litter, except a little sawdust on the floor. Each nest box is supplied with a little dry sawdust, with a handful of tobacco stems over this.—E. F. Barry in the American Pigeon Keeper.

ARTICLE II.

Objects.

The objects of this Club shall be to advance the scientific culture of the Jacobin pigeon by breeding in accordance with recognized Standard; to obtain, when possible, proper classification at shows; to offer special prizes to be competed for by members only, and to exhibit at the leading shows of America.

ARTICLE III.

Officers.

The officers of this Club shall be President, Vice-President, Secretary-Treasurer, and a Membership Committee of two members to act in conjunction with above officers. The duties of the officers will be those usually pertaining to their positions. All officers shall be elected by ballot at the annual meeting. In the event of the office of Secretary-Treasurer becoming vacant, the President shall appoint a Secretary-Treasurer who shall serve until the next annual meeting.

ARTICLE IV.

Membership.

Proposals for membership must be made in writing to the Secretary, with one dollar to pay for initiation fee. If the Membership Committee approve of the applicant his name shall be forwarded to every member of the Club. Any member objecting to the applicant must notify the Secretary within ten days of notice, and three members so objecting shall exclude the applicant.

ARTICLE V.

Initiation Fees and Dues.

The initiation fee shall be one dollar and must accompany the application for membership. The annual dues from each member shall be one dollar and must be paid by October 1st of each year.

ARTICLE VI.

Arrears.

Any member whose dues have not been paid by October 1st of each year shall be barred from all privileges of the Club and competition for Club prizes, and suspended for sixty days. If at the end of that time his dues remain unpaid, his name shall be dropped from membership.

ARTICLE VII.

Misdemeanors.

Any member acting in a manner dis creditable or injurious to the interests of the Club shall upon written notice to the Secretary, signed by two members, be expelled, provided two-thirds of the members shall so vote at a meeting of the Club duly called. At said meeting, the offending member shall have the opportunity of appearing and defending himself against the charges. Any member so expelled shall forfeit all rights and interests in the Club.

ARTICLE VIII.

Meetings.

The annual meeting shall be held on such date as may be named by the President, and at the place where it has been decided to hold the regular Club show. Special meetings may be called by application to the Secretary, signed by five members, at least thirty days' notice being given members of all meetings.

ARTICLE IX.

Amendments.

The Constitution and By laws may be changed by a two-thirds vote of all members of the Club at the annual meeting of the Club, or at any meeting called for that purpose, due notice of said change being given in the call.

ARTICLE X.

Quorum and Proxies.

A majority of all members of the Club, either present or represented by proxy, shall constitute a quorum for the transaction of business, except for expulsion of members, when two-thirds vote of all members will be necessary.

ARTICLE XI.

Club Shows.

The Club shall hold an annual show at such place as shall be decided by a vote of a majority of the members, such vote being received by the Secretary in writing, not later than October 1st of each year. The result of such vote shall be published as soon thereafter as possible.

ARTICLE XII.

Judges.

A list of three members shall be selected by vote, in writing, to judge. The association, at whose exhibition the Club decides to show, to make choice of the three. Any of the three shall be accepted to judge for Club prizes and must judge according to the Standard.

ARTICLE XIII.

Prizes.

At the annual club show, prizes will be awarded in all young bird classes wearing an enamelled seamless band adopted by the Club with the year inscribed thereon and open only to members of the Club in good standing. A special committee of three members will be appointed by the President to decide what the prizes will be. On application to the Secretary, medals will be given in lieu of money at the option of the winner.

Committee.

Order of Business.

1. Roll call.
2. Reading minutes of last meeting.
3. Report of Secretary-Treasurer.
4. Reports of committees.
5. Unfinished business.
6. New business.
7. Election of officers.

NEW JACOBIN STANDARD.

	Points.
Hood—Long and reaching for ward to the front of skull, thick and even at the edges, fitting almost close to the head and well built up behind.	20
Chain—Long and full, covering well over the beak and eyes, lying flat to the cheeks, meeting perfectly and regular from the beak as far down as possible, even on both sides.	15
Mane—To be of an arched shape springing from the back in a thin, even line, forming a junction with the hood.	12
Rose—Round and clearly defined.	2
Head and Beak—The head should be small, but slightly wide and round in front. The beak short and rather stout with a downward tendency, pale in color on top mandible.	10
Eyes—Pearl or white.	2
Carriage—Upright and showy, head slightly thrown back.	8
Markings—High cut, viz., the head to be white, running in a line with the under mandible. Thighs and between same, same color to vent as the shoulders, flights and tail white, flights 10x10.	10
Size—Small as possible.	6
Color—Rich and lustrous, even in shade and free from chequering.	9
Shape of Body—Long, slender at shoulders and gradually tapering to tail, flights long and carried above tail.	4
Legs and Feet—Legs short and free from feather on shank; feet small and neat.	2
	100

Standard Colors—Red, Yellow, Black, White, Blue and Silver, all others non-standard and to lose eight points in competing with Standard colors; Whites to lose two points when competing with Standard colors.

PET STOCK.

The Next Step.

Editor American Fancier: The man who is satisfied with what is is a man who fails to appreciate the meaning of the word progress. It used to be said, whether truthfully or not I do not know, that in China it was a crime for a man to know more than his ancestors. The statement had at least a plausible sound, for the Chinese as a nation have remained stationary. While other nations have been taking long strides forward, the Chinese have simply stood still, satisfied with what is, unappreciative of progress. The rabbit breeder should not be satisfied to be a Chinaman.

We have the Belgian Hare, and in his present form he is a pleasant and profitable possession. He has elegance of shape and beauty of coloring. He is prolific and he pays his way. But as good as is the Belgian, we ought not to be satisfied with him, provided he is capable of improvement.

In the articles which I have been writing regarding this little domestic animal, I have urged that he possessed a plastic nature, that variation was a common characteristic, and that in this tendency to vary was to be found "the promise and potency" of continued improvement.

The next step in rabbit breeding which should be taken is not so much the lengthening of pedigrees and the coining of euphonious names, not so much the getting large classes at exhibitions and creating markets for delicious and healthful meat—all of which things are commendable—as the continued improvement of the quality of the animal. We must improve the Belgian Hare.

At present our ideals are necessarily somewhat crude. The Belgian Hare has been with us too short a time to make these ideals other than guesses at what the perfect Belgian should be. He is still a foreigner, and our ideals can be perfected only after the Belgian has become naturalized and Americanized. So long as the word "imported" adds to his value very materially, we confess our ignorance of what is best and our incapacity to produce the best. But time will correct all this. As the years go by and we study the characteristics of the Belgian Hare we shall find increased knowledge furnishing improved ideals of perfection. Our ideals will cease to be arbitrary, imposed upon us by other people, and will become natural, growing out of a mastery of the characteristics of the animal. But while confessing this inability on our part to form at present a perfect ideal, through lack of competent knowledge, we are still able to

grasp obvious defects and note possible improvements. The knowledge of defects is one of the steps toward securing a more perfect ideal.

We can see quite clearly a chance for improvement in color. Now and then a young hare is born vastly superior to his mates in color. In one litter in my rabbitry I had two young born superior to anything I have seen at any time or in any place upon exhibition. One was the most brilliant red I ever saw in a Belgian and the other was the purest and most beautiful golden. It was difficult to say which of the two was the most beautiful, but it was easy to see that either was more beautiful than anything which it had been my fortune to observe in Belgian Hares. Unfortunately the doe and her whole litter died in a very peculiar manner, and these two rare animals were not permitted to grow up. But they served the purpose of showing that further improvement was possible and if the right methods were pursued was probable.

Again, I have today four young bucks which are extremely promising. I speak of them because they are kept in the same hutch and because they are greatly superior to their sire and dam. They not only show that improvement is possible, but indicate the manner in which it can be made. They are illustrations of what a good mating will accomplish, a mating made in accordance with right principles, so that defects in one parent are offset by excellencies in the other parent. And not only do these particular animals show improvement in color, but also in shape to a degree beyond my expectations.

We can, then, I believe, improve both the color and shape of our Belgians, even with our present crude ideals, by using proper care in mating and persistence in selection. A poultry breeder of experience does this, and what the poultry breeder does the hare breeder can do. But we need to carefully study our hares if we are to equal the success of the poultry breeder. Indeed, the man who doesn't mix brains with his work, who is too lazy to study the animal he attempts to breed, who thinks that the mating of two first prize animals necessarily will produce prize winners and that that is all there is to the art of mating, might as well give up all hope of success at the start, for he never can become a successful breeder. Breeding is a fine art and almost a science, and to master an art and a science demands time, brains and study. Work with the hands is a good thing, but it can never take the place of work with the brain in breeding.

To sum up in a few words the thoughts I desire to commit to this paper, the next step to take is to secure a higher grade of stock, to improve the hare in both color and shape, and to that end, as well as to correct and refine our present ideals, to carefully study the characteristics of the animal and the methods of mating which produce the best results, and to remember that this is not a hopeless task, "an irridescent dream," but rests upon the solid foundation of biological laws and is testified to by actual experience. There is nothing more certain in this world than that the Belgian Hare is capable of further improvement and that proper methods of mating and rearing will produce the improvement desired. H. S. BABCOCK.

Mr. Critchett's Comments.

Editor American Fancier: In reply to Mr. F. H. Dewey's letter in your issue of the 8th inst., I am pleased to see that he affords me an opportunity of enlightening him upon two or three points which he appears to have been wrongly informed upon.

First, the Belgian Hare rabbit is a rabbit pure and simple. It kindles in a nest made from the fur which it flicks from the chest and belly and generally has a large family, whereas the wild hare has only a brace and its only nest is a hole scratched in a furrow in the field. Its young can see when born and feeds for itself to a considerable extent and is well covered with fur. Not so with the rabbit tribe. They are born without and they do not open the eyelid until the ninth day. I have bred a cross between the wild hare and the rabbit, but the young do not breed.

Again, the pure bred Flemish Giant is, as I have already stated, a rabbit of steel grey color, with slight under-color of "yellow reddish color." Its weight is usually about 20 lbs., but I have since learned from three large breeders that they frequently breed them up to 22 and even 24 lbs., not 18 lbs. Blacks are very rare.

Some time since Mr. Dewey corresponded with me re hares—at least, I think it is the same gentleman—and I did my best to try and convince him not to purchase Flemish Giants for similar reasons given in my last letter to you, but he is evidently bent on doing that which experience has taught the breeders will undo all the perfectness of type, symmetry, markings, fineness of bone, length (no dewlap), and, above all, that grand head and ears which is so grandly shown in our pure bred hares (Belgian Hare rabbits, I mean).

Mr. Dewey, I believe, purchased many of the Flemish Giants and took them to America with the evident object of enlarging the Belgian Hare rabbit. Let me again beg my American friends and breeders not to be misled. It simply means undoing all that it has taken nearly forty years to perfect. The Flemish Giant will produce larger stock undoubtedly, but at the cost of loss of the characteristic beautiful qualities of the Belgian Hare rabbit. In plain English, he is going to try to breed hare rabbits which were bred over thirty years since. The authorities in America are wrong in trying to raise the weight (standard).

I should like Mr. Dewey to re-read both my letters and if he can find anything wherein I wish to even convey the idea that the English Belgian Hare rabbit is a hare, or other than a rabbit, I shall be very much surprised, as I had no such intention nor belief. The English breeders made the variety of the Belgian Hare rabbit, which to any breeder of experience in no way resembles our beautiful similie of a wild hare, which patience, knowledge and years of trouble have enabled them to produce a copy which it would indeed be difficult to detect from the wild hare on the grass.

Yesterday I had the great pleasure of a call from an American, a great admirer of poultry and rabbits, a gentleman by name Colonel Colt, and I may say that he was perfectly astonished with my stock, and stated, "I have never seen such beautiful stock, so like the wild hare," and my young stock he said far surpassed all, although this gentleman is evidently a lover of the Flemish Giant and to a certain extent shares with Mr. Dewey his views, but he quite agreed with me that the Flemish Giant was not at all like the Belgian Hare rabbit.

I trust Mr. Dewey will accept my assurance that although his views will not agree with my lifelong experience, and that my statements are those founded on facts, that it will and always has been my ardent wish to discuss with fanciers questions in a perfectly friendly manner for improvement. I have but one object and that is to enable all comers to breed the most perfect copy in a rabbit that most resembles the wild hare. ALFRED CRITCHETT, Sr.

PLYMOUTH ROCKS.

I HAD a male and female of Barred P. Rocks score 93½ in winter shows last season. White Rocks, white as snow, 20 hens for sale at $1.50 each. Barred Rock hens at $2 each. R. C. Brown and White and S C. Brown and White Leghorns, the kind that win at New York and Boston. The finest of White Wyandottes. W. W. KULP, Pottstown, Pa. Box 10. 8tf

THE BEST MADE.—Temkovits' Barred Rocks always win. Never have they been exhiblted without winning. Eggs from special matings for June and July, $1.50 per 13. Young stock for sale after Sept. 1st. Catalogue. M. J. TEMKOVITS, Box 901, Brooklyn. O. 05-16

CLIFFORD W. BEMAN, Box 80, Port Dickinson, N. Y., offers Buff Plymouth Rock eggs from best breeding yards, headed by 1st prize males at New York State Fair and Atlanta, Ga; and females include 1st prize birds at New York City, Philadelphia, etc. We have won Buff color specials 4 times at New York and Boston; and New York City, 1900, special for best ten birds. We will sell 10 birds for $10 or 5 birds for $6. Eggs half price. Circular free. 66-17

HOERLE'S White Rocks:—1st prize winners at the leading eastern shows. For sale at a bargain, cockerel, 1st at Torrington; 1st and special at Troy, 1900; cockerel, 1st and special for best White Rock in show at Lenox, 1901, Some 1st prize winning females and sire of these birds. Eggs, $1.50 per 13. Stock on approval. FREDRICK HOERLE, 234 Migeon Ave, Torrington, Ct. 88-tf

WETZEL'S Blue Ribbon Buff Rocks are the best. Geneva winnings, 1900, 1 and 2d cockerel, 1st and 2d pullet, 1st and 2d hen, 1st pen and all specials, 35 competing; Middletown, '01, 1st cockerel, 1st, 2d and 3d pullet, 1st hen, 1st pen and specials, 61 head competing; Cleveland, 1901, 1st cock, 1st 2d and 3d cockerel, 1st pullet, 1st pen, Buff Rock Club's silver cup, 58 head competing; also Association's $10 gold special for best 10 P. Rocks in the show, all varieties competing. Eggs $5 per setting straight. Fowls $5 each and upwards. FRANK WETZEL, Painesville, O. 99-37

BUFF ROCKS.—Better this year than ever before. In addition to my own prize winning stock, I have bought some of the best birds money could buy; birds that have won prizes, or bred from prize winners in most of the leading shows. They are as fine a lot of birds as can be found in this country. Eggs for bal. of season, $2 per 15. RALPH J. WEIR, Cambridge, N. Y. 85-36

HIGGINS' Buff Rocks won 1st prizes at the largest shows in America: At Boston, Hagerstown, Fitchburg, Clinton; in the hands of my customers at Madison Square Garden and large shows in the west. Have some of the grandest matings this season I ever owned. Will sell eggs from same pens as I use myself at $3 or two settings, $5. H. W. HIGGINS, Orange, Mass. 33-tf

I BRED White Rocks 11 years. Have them better this season than ever; pure white, low combs, yellow legs, correct size and shape. At Sanatoga, on 5 entries won 5 1sts. At Harrisburg on 4 entries won 4 1sts and all specials. 200 birds for sale. Eggs, $1 per sitting; $5 per 100. 60-tf D. L. STAUFFER, Spring City, Pa.

MY BUFF PLYMOUTH ROCKS have won for me at Madison Square Garden, Boston, Pittsburg, Washington, D. C., and other great shows, proving their quality. Prices are right, too. Stock and eggs for sale. Circular and show record free. MILES LOUER, East Onondaga, N. Y. 81-32

WHITE PLYMOUTH ROCKS.—W. C. Pierce & Co., 1st, 2d, 3d cocks, 96¼, 95¼, 95¼; 1st, 2d, 3d (tie), 4th hens, 96, 95½, 95¼; 3d, 4th cockerels, (tied 2d), 95¾, 95¼; 1st, 2d, 3d, 4th pullets, 96¼, 96¼, 96¼, 96; 1st, 2d pens, 192 9-16, 191 5 16; also best display. This was made in hot competition, 78 birds in class. This record with our wonderful winnings at Chicago last year stand alone and unequaled on this variety. W. C. PIERCE & Co., Indianapolis, Ind. 73-24

BEAN'S BUFFS are the real winners as the following records for 1900 will show: At Cambridge, N. Y., one 1st, four 2ds, three 3ds; Watertown, N. Y., two 1sts and three 2ds; Poughkeepsie, three 1sts and three 2ds; Dryden, N. Y., four 1sts and two 2ds; Trenton, N. J., one 1st and two 2ds; York, Pa., five 1sts and four 2ds; Lancaster, Pa., four 1sts and two 2ds; Hagerstown, Md., in the hottest competition of the year, four 1sts, two 2ds and three 3ds. This is an unequalled record. Write for prices on show and breeding birds. All my stock is farm raised. Address F. G. BEAN, Fairview Village, Mont. Co., Pa. 73-24

"PARALLEL (=) BAR" Rocks.—Eggs during March and April, $2 per 13; $8 per 100. Stock direct blood of Gardner, Thompson and Montauk. New York winners. My birds have won in good company and chicks from these eggs will win for you. Send for leaflet. H. T. BROWN, Box 471 a, White Plains, N. Y. 79-30

ALPHA STRAIN Silver Wyandottes. Winners wherever shown. Have good combs and shape, standard weights and plumage. They are line bred and good layers. Look up my record in the Fancier. Eggs, balance of season, $1 per setting. WM. BINGLEY, 103 McKinley St., Torrington, Ct. 75-26

MADISON SQUARE Garden Winners. We have won 1st prizes two successive years at the above show on our White Wyandottes. 1901 won 1st hen, 3d and 5th pullets and 3 specials on 6 entries, 1900, won 1st cock, 3d hen and 2 specials. For the balance of season, will sell eggs at $1 per 13. Booklet free. ALLEN C. ROBERTS, Spring City, Pa. 02-tf

"WHO KILLED COCK ROBIN?"—Robbins' Buff Wyandottes are the real Buff with solid Buff wings and tails, and have won prizes in Boston, Cambridge, Rochester, Syracuse, Troy and Poughkeepsie, N. Y.; Brattleboro, Vt. and Philadelphia, Pa. I have all my prize winners in my yards and will sell eggs at $5 per 13 straight. Stock for sale at all times. Satisfaction guaranteed or money refunded. R. B. ROBBINS, Cambridge, N. Y. 42-tf

PISER'S BUFF WYANDOTTES are always winners. One year ago at Cambridge, N. Y, in the hottest competition ever known, I won 2d, 3d pen old, 1st, 2d pen young, 1st, 3d hen, 1st, 2d, 3d cockerel, 1st, 2d, 3d pullet. My customers are doing the same all over the country and in Canada and England. A pen from my yards will breed you winners next season. See add in display column. L. C. PISER, Shushan, N. Y. 77tf

DR. SANBORN'S BUFF WYANDOTTES won 1st on pen, with 7 pens in competition, at his only exhibit this season, at South Farmingham. Also 2 2nds on single birds. No better blood in the East. Average egg yield, 99, 196 eggs. Eggs $2 for 13, $5 for 40. Cockerels $5, pullets $4 up. N. W. SANBORN, Wellesley Hills, Mass. 87-38

BUFF WYANDOTTES.—W. C. Pierce & Co., 1st, 2d cocks, 94¼, 93; 1st, 2d, 3d, 4th hens, 94¼, 94¼, 94¼, 93⅛, 1st, 2d cockerels, 92¼, 92, 1st, 2d, 3d, 4th pullets. 94, 93¾, 93, 93; 1st, 2d pen, 186 15 16, 184 9-16. There is no use mentioning the above the scores speak for themselves. W. C. PIERCE, & Co., Indianapolis, Ind. 75-26

SILVER Wyandottes as good as the best, four regular and one special prizes at Madison Square Garden, 1901. My birds are large size, clear centers and good layers. Males in breeding pens above Standard weight. A few cockerels for sale. Eggs, $2 per setting, 2 settings, $3. HECTOR W. MILLSPAUGH, Walden, N. Y. 72-tf

BUFF and White Wyandottes. My birds were prize winners at Johnstwwn. In White Wyandottes, four entries, won 2d cock, 3d hen, 2d ckl, 1st pullet and special for best cock, hen, ckl, and pullet. At Troy, 6 entries, 1st cock, 1st hen, 1st pullet. At Matteawan, in Buff Wyandottes, 5 entries, 1st cock, 1st hen, 1st pullet, 1st pen. All this in hot competition. Eggs for special matings, $3 per 15. Other matings, $1 per 15, $5 per 100. Catalogue free. EDGAR BRIGGS, Poughkeepsie, N. Y. 87-12

WHITE WYANDOTTES.—W. C. Pierce & Co., 1st, 4th cocks, 94¾, 93¾, (tied 2d); 1st hen, 96½; 1st cockerel, 95, 4th pullet, 96¼, (tied 1st and one other scoring 96¼ that did not win a place); 1st pen, 191¼. Here again in hot competition we won the big end of the prizes, especially the first, losing only one and tieing in score with this winner. W. C. PIERCE, Indianapolis, Ind. 75-26

THE WINTER LAYERS of the 19th century are Geo. Bradley's White Wyandottes. Have been bred for layers for generations, standard in weight, white in plumage, pullets lay at six months old. HARVEY SEED CO., 26 Ellicott St., BUFFALO, N. Y.

die by being lousy than from any other cause. You can talk about improper care and food, lack of green food and grit, but, when looking for the root of the trouble look for lice, and when you find them look into the merits of Lambert's Death to Lice Remedies. Rev. H. H. Purrington, Mt. Vernon, Maine, writes: "We all use Death to Lice and find it most satisfactory." The Norton Poultry Yards, Dallas, Texas, writes: "We have been using your Death to Lice for the past four years and it has given entire satisfaction."

MORE CHICKENS

have head lice than most poultry keepers realize. Some think that these little pests are pin feathers on the top of a chicks' head and do not take the trouble to examine them closely until the broods begin to die off. One Massachusetts fancier says that it cost him hundreds of dollars to learn this. Death to Lice Ointment is made especially for the extermination of these little blood suckers, without injury to the little chicks. 100 doses 10c postpaid.

MORE CHICKENS

than should go into two coops are often crowded into one. The lice will then crowd into these small quarters and assist to make the nights long, hot and miserable. The little mites or spider lice crawl out of the cracks and crevices and extract more blood from the chicks than they can make during the day. Charles L. Evans, Wood River, Neb., writes: "I have given your 'special' a thorough trial. I had a henhouse that was polluted with mites. I mixed one (four) ounce box of special to one gallon of whitewash and gave it a thorough whitewashing. I now defy anyone to find a louse about my hen house."

MORE CHICKENS

properly cared for mean more money. Proper care means a liberal use of Lambert's Death to Lice Remedies as well as suitable food and housing. No poultry keeper ever failed because he put too much money into Death to Lice. Many do fail because they do not keep their flocks free from vermin. The most successful money-making poulterers are those who use the most Lamberts. We have remedies for all kinds of lice, on anything and everything. We put it up in all sizes of packages to suit all kinds of people. We have all kinds of good testimonials as to its efficacy.

PRICE LIST.

Death to Lice Powder 10 and 40 cents by mail. Large sizes 50c and $1, by express from here or nearest agency. Death to Lice Ointment, 10c and 25c by mail. Death to Lice Special, 10c and 40c by mail. Samples of one each of the above 10c sizes at one time 25c. Death to Lice Liquid, 1 qt, 35c; 3 qt, 60c; 4 qt, $1, from here or from nearest distributing point. A 64 page illustrated book mailed free. D. J. LAMBERT, box 248, Apponaug, R. I. 73 24

WHAT SAVED JUDGE CLARK'S CHICKENS.

Scotch Plains, N. J., Sept. 13, 1900—Judge Clark, when not dispensing law and dealing out justice, devotes a great deal of his time to raising chickens and ducks. About two weeks ago his fowls were attacked with a disease which began carrying them off at an alarming rate, notwithstanding all his efforts to check the epidemic. Several authorities on chickens were consulted and it was agreed that the fowls were suffering from some form of cholera. A remedy was at last found to check the disease. This was procured from the Star Incubator Co., of Bound Brook, and it proved to be just the thing, and the Judge is once more happy and will begin at once to replenish his stock.

From Plainfield (N. J.,) Daily Press. September 13th, 1900.

Manufactured only by STAR INCUBATOR COMPANY, BOUND BROOK, N. J., AND 38 VESEY ST., N. Y. CITY.

IT IS A FACT

That our Breeding Pens of Black Minorcas contained more noted prize-winning birds than any two yards combined. We have raised from them the **LARGEST** and **BEST** flock of chicks we have ever owned.

Prospective buyers will do well to consider **THESE FACTS** before buying and send stamp for our new Catalogue.

STUPENDOUS FORTUNES MADE IN OIL.

Rockefeller with his hundreds of millions easily heads the list, but there are scores of others unheard of whose fortunes range up in the millions.

California is rapidly coming to the front in Oil Production. The past two years has seen a remarkable advance in value of Oil Company Shares, being all the way from a few dollars to One Hundred, Two Hundred and Three Hundred Dollars a share, and in the Home Oil Company to over $4,000 a share.

Hundreds of people have made more money the past year in California Oil Fields than they ever dreamed they would be worth —[Financial Record, Oct. 3, 1900.

One company paid last year $175,000 in dividends on a capital stock of $100,000, and land which could have been bought a year ago for $5 an acre has, by virtue of oil, advanced to $30,000 an acre.—[Los Angeles Herald.

More fortunes will be made in California oil investments within the next two years than the most enthusiastic would have dared to predict. The time to buy oil stocks is before the price scoots up to hundreds and perhaps thousands of dollasr a share.—[Financial Times.

A GILT EDGED INVESTMENT

SAN JOSE PETROLEUM COMPANY,

H. W. CONKLIN, Pres. L. A. SPITZER, Vice-Pres. D. A. PORTER. Sec'y.
C. A. BOTHWELL, Treas. J. C. CONKLING, Ass't Sec. & Mgr. ALLAN BRANT & F. B. BROWN, Att'ys
GARDEN CITY BANK & TRUST CO., San Jose Depository.

The officers and directors are substantial, reliable business men of San Jose. The affairs of the company are conducted on safe and proper business lines. Officers draw no salaries. Money all used to sink wells, and to otherwise develop the property. Lands consisting of 800 acres lying in Fresno-San Benito District are among the best in the State.

Oil in this district is of high grade and of a superior quality. Oil investors invited to our office. We can interest and

MAKE YOU MONEY.

GREAT FORTUNES HAVE BEEN MADE.

Hundreds, yes, thousands, have been made wealthy during the past year through wise investments in oil. We offer to the eastern public the same or a similar opportunity. Grasp it while you can.

To-morrow may be too late.

10,000 SHARES FOR SALE AT 50 CENTS PER SHARE!

To give you an illustration of the rapid rise in value of oil stocks we quote the following, only a few of the vast number, and their advances were all made within one year, some less than 4 mos.

The following will suffice to illustrate what "quick action" means on an investment and where the profits begin from the day oil is struck:

El Dorado Oil Co., first cost	$ 50	now	$ 5 00
Kern River Oil Company, first cost	1 00	now	16 00
Independent Oil Company, first cost	1 00	now	3 00
Blue Goose Oil Company, first cost	25 00	now	41 00
New York Oil Company, first cost	10 00	now	200 00
Home Oil Company, first cost	100 00	now	5000 00

Do not delay. The price may advance any day.

The officers and directors are men of sterling integrity, well known and respected in the community where they reside. They have organized and put their own money into this company, with a firm purpose to make it a successful and one of the big dividend payers of the state. Gentlemen, while we advise caution, the early bird gets the worm. Stock you buy to-day for $100.00 may cost you $1,000.00 to-morrow, or even $10,000.000. Order at once. Address the company at San Francisco, Cal. or 310-tf

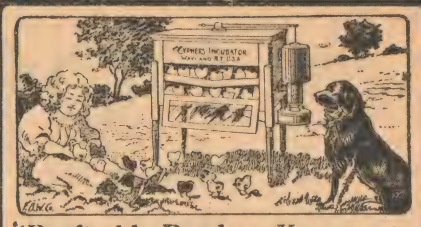
"RINGLETS" SOAR STILL HIGHER.

AT THE IMPERIAL SHOW OF THE NATION—
MADISON SQUARE GARDEN, N, Y., THE WORLD'S RECORD OF

E. B. THOMPSON'S BARRED PLYMOUTH ROCKS



4 YEARS IN SUCCESSION was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ever accomplished in the annals of the **New York Show: Winning** during **4 years in succession MORE THAN THREE TIMES AS MANY 1ST PRIZES** as any other exhibitor, and as many **1ST PRIZES** as **ALL COMPETITORS COMBINED**, besides more **than twice as many Cups** and **Specials** as all, including the **superb challenge Trophy**, value **$100**, for best cock, cockerel, hen, pullet and exhibition pen; **$100 Sterling Silver Cup** for finest exhibit, **Grand Special Prize Sweepstakes Cup** value **$100** presented by the **President** for best P. Rock cock, cockerel, hen and pullet, any variety. My clean sweep of

FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES

on pullets has never been approached in Madison Square Garden, and stands alone and unequaled.

The world's record of 1st on exhibition pen at New York 3 years in succession is the undisputed Champion. With their 1900 record the **"RINGLETS"** have won at New York a grand total of **77 PRIZES**, **31** of these prizes are 1st and specials, being 17 more 1st and special prizes than won by any competitor in the history of the show. Rare bargains in yearling breeders in lots of a trio or 100. Show bird fit to win in the fastest company. Richly illustrated 24 page catalogue on application. Elegant breeders in any number. Eggs from finest exhibition matings, 1 sitting, $5; 2 sittings, $9; 3 sittings, $12; 4 sittings, $15. ADDRESS 91-tf

"Profitable Poultry Keeping in All its Branches."

This is the title of the new and elegant Catalogue issued by the Cyphers Incubator Co., for 1901. It contains 224 pages, 8x11 inches in size, over 200 fine new half-tone illustrations and a wealth of interesting, down-to-date matter, covering the subject of **Poultry for Profit** in all its branches.

This is a Brand New Book,

not a re-hash of old ones. Contains special articles written by experts, and illustrates and describes over fifty of America's largest and most successful Duck, Broiler, Roaster and Egg Farms. It also contains the endorsements of over one hundred of the foremost breeders of this country—men and women who are using the **Cyphers Incubators**—and shows photographic views of many of their poultry plants and favorite poultry houses. Ask for Book No. 9 enclosing 10c in stamps, and address nearest office.

(J. H. Drevenstedt & Edward Bartlett.)

TYPOGRAPHICAL UNION LABEL FULTON COUNTY No. 258

SATURDAY JULY 13 1901

From the Editor's Perch.

Our hens are beating the pullets.—A Few Hens.

What a shame! We are surprised that Editor Michael Angelo Boyer would ever tolerate such a thing.

***

August D. Arnold, Dillsburg, Pa., has gone into Partridge Wyandotte breeding and believes they will enjoy a great popularity in the next ten years, a belief shared by a great many fanciers. "Gus" is at present wildly enthusiastic over his Blue Belgian Hares. He writes about them and also White Belgians on another page of this issue.

***

The dates of the Hartford, Conn., show are December 10 to 14. T. F. McGrew and J. F. Crangle will judge the poultry and F. B. Zimmer will judge the classes in the dog department—a new feature at this show. "Shorty Z." will have to hustle the canines along at a lively clip on Tuesday, so as to get back to Johnstown Wednesday in time for placing the ribbons on his poultry classes.

***

The Empire Cooping Company have closed a contract with the management of the Brockton, Mass., Fair to equip their poultry house with over two thousand coops of the latest design. This should give Brockton the largest and best equipped building in the country.

The day of promiscuous cooping poultry shows is fast passing away, especially in the East. Even small county fairs are equipping permanent buildings with uniform coops, while some of the larger shows rent Spratts, Empire and Canfield coops in order to make the exhibits look better, adding to the comfort of the birds at the same time.

***

There is nothing that detracts so much from an exhibit of poultry and pigeons as a lot of odd sized and unsuitable coops stacked up in promiscuous fashion under a tent or a shed.

***

We call the attention of our readers to the announcement in this issue of a Grand International Poultry Show to be held at the Alexandra Palace, London, England, December 18, 19, and 20, 1901. It will be well for American fanciers to correspond with Secretary Thornton and also form some plan by which the intending exhibitors can pool their issues and entrust their exhibits to one responsible and capable fancier who can look after the comfort of the birds on board of the steamer. We are safe in assuring American exhibitors first-class treatment of their stock while in England, as the Hon. Robert A. Colt is a past master in the art of caring for and catering to the wants of birds.

***

Where chicken yards or runs have been robbed of all vegetation and allowed to become foul, the quickest and best thing to do is to spade the ground thoroughly and sow with crimson clover. The latter grows rapidly, gives a splendid lot of green food, and purifies the soil to a very large extent.

***

Notwithstanding the many rainy days and the recent torrid spell, reports from many sections of the country state that chickens have grown rapidly and show plenty of vigor. We believe the crop of fine feathers will be an unusually good one next fall and winter.

***

Mr. W. J. Kinsley, in moving from Elizabeth, N. J., to his summer home by the sea, lost several letters sent to him by readers of the American Fancier prior to July 2 in answer to his advertisement, and requests us to kindly ask them to duplicate the same and address them to Wm. J. Kinsley, Elizabeth, N. J.

***

Use "doubtful" eggs in your own kitchen.—A Few Hens.

With all due respect to Editor Boyer, we prefer to use such hen fruit outdoors.

***

George H. Burgott, superintendent of poultry at the Pan-American, informs us that the notice published in the Southern Poultry Journal and copied in the American Fancier, that Mr. Shaw, of La Grange, Texas, was appointed one of the judges of poultry, is incorrect. It should read J. W. Shaw, Brockton, Mass.

***

Senator "Dave" Nichols says F. B. Zimmer is afraid to send live birds to the Pan. The Senator will probably get roasted at the latter when "Zim" arrives.

***

Editor Boyer gracefully published the following in his tidy little paper a Few Hens:

"According to the New York World, Miss Dolly Raynor, a pretty girl of Westhampton, L. I., has been proclaimed the champion duck picker of Long Island. She picked 110 ducks in one day. The competition was held at E. O. Wilcox's duck farm, at Speonk, L. I. A hundred invitations had been sent out by Mr. Wilcox to society girls in Easthampton, Westhampton and Southampton. About seventy-five young women accepted. Feathers flew when the girls got to work, and Miss Raynor was soon far in the lead. She took a half-hour extra rest at luncheon time, and then started in to beat the record. At 4.58 she picked 110 ducks and received $5.50 and a silver duck paperweight."

We believe four editors once went to Egg Harbor City, N. J., and tried to pick ducks on a wager. As near as we can remember, only one duck was separated from its feathers and each editor claimed a share of the feat, which consumed a whole forenoon. Perhaps M. K. Boyer, P. H. Jacobs and E. P. Cloud can further enlighten the poultry fancy just how that duck was picked. Our recollection is that "Uncle Mike" swiped all the flight feathers so he could clean his corn cob pipe more easily. At all events the aforesaid editors will yield the championship to the lady mentioned in the clipping above.

Shall The American Poultry Association Meet at the Pan-American?

A member of the Association who feels that there should be a meeting of the American Poultry Association at Buffalo during the poultry display in October, and that there should also be a regular annual meeting after January 1st, has written a letter to the president of the Association asking him to call a special or extra meeting under By-Laws, Article I, which gives the president the power to call extra meetings at the request of five members.

President Kimmey has replied: "Yours of June 26th at hand and contents carefully noted. I am heartily in accord with the views therein expressed. It will be for me a pleasure as well as a duty to call an extra meeting at Buffalo during the Pan-American Poultry Show at the request of five or more members of the executive committee. Allow me to suggest that such request should be signed by as many members as possible. Will it not be well to provide a number of request papers, send them to such of our friends as you think will join you, have them sign and forward to me. There should be plenty of time allowed to give due notice that all may know of the meeting and be able to make their arrangements accordingly.

FRED. L. KIMMEY, Pres't."

The adoption of this course of procedure would obviate the chance of any notion that the Association had held two regular or annual meetings in one year, and would give to the interest the advantage of a meeting at the Pan-American during the October show of poultry. To aid the president in the furtherance of such a plan, we call upon the members of the executive committee and other members to write direct to Mr. Fred. L. Kimmey, President, Morgan Park, Ill., and tell him if in favor of the plan, so he may be able to act prompt and within proper time, so that all may be advised through the August 1st issues of the poultry presses.

C. Bright from Wearytown.

Thank God!
C. Bright from Wearytown
From death to life's been raised;
'Twas "poultry verses" (put this down)
That saved him. God be praised!

J. G. QUINIUS.

Dayton, Ohio.

—Advertise in the American Fancier.

Grand International Poultry Show at the Alexandra Palace, London, England, Dec. 18, 19, 20, 1901.

Editor American Fancier: I shall be obliged if you will allow me through the medium of your columns to again notify your readers of the fact that we are going to hold a grand international show of poultry at the Alexandra Palace on December 18, 19 and 20 in this year. We are already promised birds from France and Germany; Russia, Denmark and Belgium have been communicated with; we hope that American fanciers may see their way clear to send over a large consignment. If we receive promises of sufficient support we shall be prepared to grant silver and bronze medals and diplomas for the American section, and there will, I think, be no difficulty in raising a fund for a trophy, value £10 10s., to be awarded to the best bird sent from America. For the American section we should hope that you would secure the services of an American judge, but, of course, the birds could also be entered in the open classes at the usual fee, viz., 5s. There would be no fee for the American section. The birds would be no expense to their owners while here, as Mr. Colt, managing director of Robert A. Colt, Ltd, of Waltham Cross, London, England, has very kindly offered to meet the birds at the Albert Docks and also to pen and feed them and get them ready for the show. The birds should be sent from America on November 30th and would arrive in England about December 11th.

The Alexandra Palace is well adapted for a show. The central hall, lighted through a glass roof, is capable of holding 3,500 birds in a single tier. It can be reached from the centre of the city in half an hour by two lines of rail. The grounds have lately been made over to the public and on Whit-Monday over 200,000 persons visited the place.

The show is being run by a committee of practical fanciers drawn from the leading specialist clubs. Our president is Viscount Deerhurst and our vice-presidents are Captain Heaton and F. W. Smith. The show is receiving the support of the Poultry Club, and the following societies are holding their club shows in conjunction with this fixture, thereby assuring it a thoroughly representative collection of birds, viz.: The Plymouth Rock and Andalusian Club, the Langshan Club, the Old English Game Club, the Orpington Club, the Buff Orpington Club, the United Wyandotte Club, the Leghorn Club, the Campine Club, while several other clubs are considering the matter.

From the information I have been able to obtain I should say that the following would sell well here: Barred and Buff Rocks, Buff, White and Partridge Wyandottes, Langshans, Light and Dark Brahmas, Brown and Buff Leghorns, Houdans, Andalusians, Rhode Island Reds, Turkeys, Pekin Ducks, Bantams generally, and any new and striking variety. Anything really good will, I feel assured, meet with a ready sale.

Mr. Robert A. Colt, who is known to fanciers on your side, will be pleased to answer any inquiries and to give any information, while my own services are quite at the disposal of American fanciers, who will meet with a very cordial reception if they can see their way clear to come over and see their birds win.

In the event of American fanciers sending over birds, I do not think there will be much difficulty in arranging a return visit of English fanciers, either in this year or the following.

Although time is not absolutely pressing, yet I would beg any intending exhibitor to write me promptly, and it would be well if a competent and reliable gentleman could be appointed

on your side who would make any necessary arrangements and with whom I could communicate direct. He should preferably be appointed by some central authority, but in any case he must be well known to and enjoy the confidence of American fanciers and exhibitors.

R. T. THORNTON, Sec'y.
Middleton Hall, Brentwood, Eng.

Howell's Egg Noggs.

Editor American Fancier: Since I wrote you on the subject of "Market Eggs" I have received a letter from one of your subscribers, known only to me through slight business relations, but in whom, nevertheless, I found an upright business man and a good fancier in a practical way. I quote from his letter: "I have found there are two sides to this question. Two years ago I shipped you several cases of eggs and you pronounced them first-class, but being obliged to buy part of the eggs to fill the cases I stopped shipping, for fear of getting in some bad ones, although your returns were very satisfactory. Now, this spring I had eggs enough of my own to fill a case every four or five days. I shipped a case of eggs and returns were satisfactory. I then shipped five more cases and did not get pay for them. I have been swindled out of twenty-five dollars, and that is enough to discourage anyone from shipping when a fair price can be obtained at home."

I have refrained from giving the name of this firm, as the present party succeeded in ownership a fancier and stockman well known in poultry circles, but it is nevertheless unfortunate that a shipper of a strictly first-class article, as I know this one's to be, should be skinned out of his money by an irresponsible person and discouraged from making further shipments.

It disgusts those who take delight in placing a really desirable article on the market and encourages the home market man to continue in his shiftless way and to brag about how much he saves by selling at home, where a stale egg counts one in a dozen and no loss off.

In doing business a certain amount of risk must be taken if done on other than a cash basis. The risk can be minimized by dealing on a weekly or semi-monthly basis rather than a semi-monthly and monthly, as in this case.

I might supplement my last article by saying we overcome this annoyance and uncertainty by paying for those bought regularly at a certain spot each week at the time they are turned over to us. Where business is done by mail more time must be employed between shipper and receiver and more risk taken.

To continue, there must be others besides ourselves interested in the market egg question, as we have received an extract from Farm-Poultry by some well meaning but misguided mortal. I have not the honor of knowing the name of the writer, but he evidently has a very prolific imagination and a good pair of office shears. Copy, too, is mighty handy to have around in the summer time when there is not much doing in the news line. There is but one firm manufacturing condition powders fortunate enough to get out a booklet the public will subscribe for by the year. It is for this generosity on the part of a confiding public that inures them in the good graces of our critic and probably accounts for the child-like trust he places in them as compared with the country store-keeper. The shears have been worked so lustily on the two extracts of my former article brought to my notice that there is not much left to convince the reader thereof.

It is reasonable to suppose that conditions have changed—the present method of handling eggs would compel that—but I do not think the improvement has been any greater among the farmers who patronize the country store than in the store's ability to handle quicker. The same old nest egg is doing business today at the same old stand, and the groceryman and egg collector must first get the good eggs before he can get the good customer. When once an egg producer gets educated up to the fresh egg question, he cuts out the country store and ships direct, for he has learned that delays are dangerous.

For the benefit of the timid, I would say there are reliable and responsible middlemen in the egg business as in all the other walks of life. Centralization is the order of the day. One individual egg producer will not and probably cannot ship with satisfaction, but when several band together for mutual advancement and gain the problem is solved. The price is the incentive that forces all to seek the most advantageous market for their produce. It has been said, and said truly, that the quality and perfect freshness of a mark of eggs, once established, the asking price is the selling price. Still, the matter of price is not well understood. There must be some distinguishing mark, name in short, that makes the sale. The Darling creamery butter of Philadelphia will retail at 60 cents a pound among the wealthy. Put it in a plain wrapper and 25 cents would be a top price.

We quote from a postal just received from one of the largest egg collecting houses in New York State, which includes transportation charges, as follows: "Our own farm," special, per dozen, 17½ cents; fancy brown, per dozen, 16½ cents; fancy White Leghorn, per dozen, 18 cents. By comparing these prices with your market quotations it will be seen they are not exorbitant and contain none of the 5 to 10 cents a dozen above nonsense, with which many writers on the subject delight in adorning their fairy tales with. Of course, it makes a good argument when extolling the increased egg production to be had by feeding "Brown's Condition Powder makes hens lay," and looks nice when the profits are figured out at 10 cents above the market, but I can advance a better argument than that. If the firm quoted above can make large profits by buying on the market and selling at a slight advance, it must certainly be equally as advantageous to the small shipper to seek the same market in his small way.'

In closing, will say that it will be found that conditions have not changed greatly in fourteen years. We have today the same old musty egg, the same old waiting for a buyer, and the same old story, "used them in the arts" (one branch of said art is established in Johnstown and Gloversville, I am told).

Voitellier on the Houdan Fowl

[Translated from the French by JOSEPH B. THOMAS, JR.]

The Houdan fowl may be called the queen of the French farmyard. They alone unite elegance of carriage and of form, a gay and enticing plumage, with all the practical qualities demanded by the farmer's wife. They are good layers, easy to fatten, and above all, their flesh is delicate. It is, then, to this breed belongs the first place among French breeds. What could be more agreeable to the eye than a flock entirely composed of pure bred and selected Houdans? That mottled plumage always shining, that crest so proudly carried, have certainly a more pleasing aspect than that of a flock all black or all white.

Water For Chicks Vs. No Water.

The question of water for very young chicks being more or less a matter of opinion at the present time, some strenuously contending against it, whilst others calmly follow the time-honored custom of administering it, three times a day or more, we may say that we have brought up through the past three weeks of the hottest weather a score of the most delicate Bantam chicks without loss, but also without water. One night, after a burning day (a real roaster), we let one chick have just a wee drink. Alas! dead from diarrhœa by 9 a. m., next morning. Let those who are at pr sent halting between two opinions reflect a moment on the fact that first of all a chick invariably overdrinks itself, by reason of the jealousy it entertains to the others, and when it has no very strong constitution, by reason of the constant in-breeding necessary to its production, an overdose may easily prove fatal

Again, in very hot weather Nature dries up her surface, reducing moisture (save as dew) to a minimum, and animals, birds, etc., at such times are driven to get the moisture they require through succulent vegetation or the lower animal life. In very hot countries, or at very hot seasons in our own country, a copious draught of water has often done irreparable and sometimes fatal mischief.

Thirst, habitual thirst, is not a healthy sign in man or beast, but rather a sign that improper food has been taken. Chronic thirst is a disease, therefore why encourage it in very young and often very delicate birds by administering liquid ad libitum. Water is entirely prohibited from the young of such birds as build in trees, walls, buildings, etc., until they acquire a strength that can stand it. But the wild birds are not in-bred, and therefore are constitutionally stronger than some of our weaklings, which, with all the care we can give them, often only live a wretched life of a few hours and then perish. The soft food we should give the youngsters, ought to contain pretty much all the moisture they will want till they become their own providers.

And yet here again the matter must not be overdone so that the mealy mass is sticky. It must always be in a friable, crumbly state, but as the chicks get older may have vegetables chopped up with it. It is astonishing, however, how much leaf, grass and herb a young chick will help itself to in a single day, and how many flies, beetles, worms and insects it can put into its own larder by the time it is a few days old.

Certain plants, even in the hottest weather, retain the dew they have collected over-night, right through the next burning day, so that, if the chick is as knowing and persevering as it ought to be it will always, like some of its owners, be able to find a drop or two of moisture to slake any abnormal thirst which may arise. Anyway, Nature is the best provider, and given a lot of delicate chicks to bring up the experienced poultryman would prefer laying his "bottom dollar" on those which were reared without water rather than on those to which liquid was supplied regularly and often.—Strongbow in Fanciers' Gazette, England.

MILLIONS IN OIL

California Again Attracting the Attention of the Civilized World. :-: The Gold Fever of 1849 Eclipsed by that of Oil in 1901...

THE MIDWAY OIL COMPANY,

OF OREGON,

Lands Situated in the World Famed Sunset MIDWAY DISTRICT.

This Company owns and controls over 2000 acres of selected oil land and is conceded by all who know anything about the Oil Companies of California to be one of the best, largest and strongest in the Golden state.

DEVELOPMENT NOW UNDER WAY.

The Midway Oil Company has two wells started, each down about 800 feet, and two other wells just started. Work on them all is being pushed with vigor.

HAVE LEASED THREE EIGHTY-ACRE TRACTS.

The Company has leased three 80 acre tracts, contracts call for immediate work and well will be drilled at once. There is no doubt but what at least 7 rigs are now steady at work on the Midway Co. property.

NO SPECULATION IN THIS.

An investment in Midway stock is an investment without any speculation whatever as to loss. The only speculative feature being how much more will you make than the amount figured on.

LANDS ALONE VALUE AT $2,000,000.

There are guarantees top of guarantees for investors in this stock and it may all be withdrawn from market any hour.

OFFICERS AND DIRECTORS.

The men in charge of this company are able and honest, and have means to develop the property without selling stock. However, for a time they offer

TEN THOUSAND SHARES FOR SALE AT PAR!!

$1.00 per share. A few Portland business men who know the Officials took 50,000 shares. The company has no prospectus, they did not intend to sell stock. All information, reference, etc., will be cheerfully given upon request.

Address
THE MIDWAY OIL COMPANY,
506 PARROTT BUILDING, SAN FRANCISCO, CAL., OR
J. A. SMITH, EASTERN AGENT
68 STATE STREET, ALBANY, N. Y.

HON. ASHLEY W. COLE, Brooklyn, N. Y., Chairman Board of State Railroad Commissioners.
STILSON HUTCHINS, Washington, D. C., Publisher and Mine Owner.
HON. STEPHEN W. DORSEY, New York, Ex-U. S. Senator and Mine Owner.

BANKERS.

WELLS, FARGO & CO'S BANK, - - - - 63 BROADWAY, NEW YORK.

OFFER 200,000 SHARES TREASURY STOCK AT $3.00 PER SHARE.

THE CALIFORNIA KING GOLD MINE COMPANY owns 23 claims in Picacho Basin, four miles from the Colorado River, in California, and twenty miles by direct road from Yuma, Arizona. . . . . .

DEVELOPMENT work has been in progress for six years, and more than ten thousand feet of shafts, drifts levels and cuts have been completed and paid for.

Upwards of fifteen million tons of ore are now ready for the mill, all of which will be mined by open cuts at a nominal cost.

A CONTRACT has been entered into for the erection of a mill and cyanide plant capable of handling 1,000 tons of ore daily, which will be completed this year. The Directors guarantee that this plant will be placed in operation, regardless of the amount of treasury stock subscribed. The net profit after commencing work will exceed $60,000 a month, and probably reach $100,000 a month within a year. The ore in sight will supply such a plant for more than forty years, assuring an annual return of 20 per cent or more on the investment.

There is no promotion stock. No salaries to officers. Every dollar realized from the sale of stock, goes into the treasury to pay for the plant. Reports of J. Ralston Bell, London; William A. Farish, Denver; Emerson Gee, Denver; P.C. Du-Bois, Berkeley, Cal.; J. L. Shepherd, and others, all eminent mining engineers, strongly recommend this property.

This is an Opportunity to invest in a large Mining Property of known value, managed by experienced mining men in the Interest of stockholders

Application will be made for listing the stock on the Boston Stock Exchange. Prospectus and any information desired will be furnished on application. Subscriptions received by

The California King Gold Mines Co., 32 Broadway, N. Y. City. George F. Beakley, City Agt., Johnstown, - - - N. Y.

American Polish Club.

Editor American Fancier: The first annual catalogue of the American Polish Club is now out and every breeder of Polish and Polish Bantams should secure a copy of same at once, as it contains much information on the Polish fowls. All breeders who are not yet members are invited to join at once. Send in one dollar and become a member of this popular and growing club without delay. Our club has come to stay. A special meeting will be held at Buffalo during the Pan-American poultry show. For catalogue of the club address

Danger For Rhode Island Reds.

UTILITY QUALITIES WIDELY APPRECIATED.

Fanciers and breeders admit the rapidly increasing interest in Rhode Island Reds during the past few years, not only among farmers, but among breeders of choice stock, especially in the eastern and middle states. They have won their way on their merits as an all-purpose fowl. Their attractive appearance also adds very much to their chance of becoming very popular in every section of the country. Their good qualities are now pretty well understood, and they hold a secure place as producers of large tinted eggs, and as desirable dressed poultry. As pure-bred fowls, however, they are not in good standing. Their lack of uniformity in breeding, both as regards type and color, has seriously hindered their general introduction among fanciers. Although these faults do not lessen their popularity among farmers and market producers, they do make them less satisfactory in other quarters. The millions who have kept the carefully bred varieties that are so common to-day will not be satisfied with mongrel breeders. Any stock that will not breed a fairly uniform looking flock, no matter how good for business, will have no permanent place in their yards.

TOO MANY TYPES.

Egg producers who originated and perpetuated Reds follow none of the fancier's methods. They are satisfied that the reds should remain mongrel breeders, provided they are prime egg producers and made good dressed poultry. Hardly any two producers bred them alike in shape or size, neither did they carefully select specimens to establish any particular color. Their size would go up one season and down the next, and then shape and color would change, also, according to the lot of males secured to breed from each season. This condition of things existed 20 or more years ago, and continues to-day among the large egg farmers. A few of the males produced are an attractive bright red, but more not. The hens come all colors from dark brown to straw color, and usually all are saved and bred from. Such stock can be found by hundreds and thousands on most of the farms within 15 or 20 miles of where Rhode Island Reds originated. There are millions of them in existence within that area. The producer who wants just egg layers or dressed poultry stock, and expects nothing like a pure breed, makes no mistake in getting such, because he can buy it very cheap. Its behavior will not disappoint him. He can find small, quick maturing specimens or larger and hardier birds as he prefers, also those of many different shapes. All, although crude low-grade stock, are real Rhode Island Reds. Twenty or more years of breeding to no particular type, color or kind of comb leaves them mongrels still.

THE IMPROVED REDS.

In great contrast to this stock are the modern improved Reds. Years ago a few fanciers commenced carefully to breed selected specimens, endeavoring to produce a creditable pure breed. The use of some of this material to produce two new buff breeds was what called special attention to the original stock. In some sections, farmers had preferred single combs on their birds and they were most common. In other neighborhoods, the use of rose comb males was favored, but the majority of flocks contained both kinds, and were bred together. A single comb variety of Reds, with the natural markings of the original stock, was soon established that bred quite uniform and true to comb, and was exhibited at fairs and gained great favor. The demand for this stock was so great, that to meet it, anything and everything that would pass regardless of its ancestry was sold. When there was such a demand for Buff Wyandotte and Buff Plymouth Rock material, a great effort was made to breed out the black in tail and wing flights of both sexes and the black in hackles of females, which were natural characteristics of Rhode Island Reds. To get the even buff color, the natural contrast in color between the upper and lower portion of the body as usually found in both male and female Reds was also objectionable, and an even color from head to foot was sought. This stock bred to Buff Wyandotte and Buff Plymouth Rock Standard would throw some very nice dark red birds, having less contrast in color between neck, breast and back than was natural, also females with hackles free from black and with but little black in tail. From these a strain of Reds was established having a tendency to breed females without black in hackle. Under this arrangement, one pen would produce what could be sold as Buff Plymouth Rocks, Buff Wyandottes, Single Comb and Rose Comb Rhode Island Reds. No doubt the improved Reds produced in this way might be more refined in head, comb and earlobes than the crude Reds and have better undercolor but they would breed a large number of buff males and females. After the demand for buff material subsided, and the popularity of Rhode Island Reds grew, what had been sold as Buff were then sold as Reds.

BREEDING SEVERAL VARIETIES AND QUALITIES.

The improved Single Comb variety had been pretty well perfected, so it would approach a pure breed, before Rose Comb specimens were taken up by fanciers and bred and improved in the same direction, and they were considerably in advance of the latter in color and quality. Now some fanciers are working to perfect, from sports from Light Brahma ancestry, a Pea Comb variety, but it does not breed very well at present. Although the breeding of two or more varieties distinct only in having different combs is condemned by some former makers of the A. P. A. Standard, and especially by breeders of the new buff and other breeds, who would like to see them have but one comb, and that a pea comb; Rhode Island Red breeders themselves are not worried over the matter, and continue to breed the several varieties. If the sports from each variety are not sold or bred from regardless of ancestry, if they are bred as distinct varieties should be, I can see no objection to it; otherwise carefully bred flocks will be greatly injured. It should be distinctly understood that there is almost as much difference in quality and breeding between the crude egg-farm stock and the modern Improved Reds, as now bred by many fanciers, as there is between the breeding of common mixed fowls and the best Plymouth Rocks and Wyandottes of to-day. As one class of Reds is plentiful, and the well-bred stock is scarce, 20 or 100 crude Reds can be, and probably are, sold to one improved specimen. There is no reason to regret this, provided they are sold for what they are and the buyer gets what he expects. The more unimproved Reds are scattered over the country, provided their owners understand their quality, the better for all concerned. But every mongrel specimen sent out, unless sold for what it is, hurts the improved stock in the eyes of the fancier and breeder of pure bred stock, no matter how well it suits the market producer. Fanciers are very likely to think, if a long price is paid, that there are none better, and that they are so far away from a pure breed they will let them alone. Therefore, while meat and egg stock is being widely distributed and favorably known, those nearly like a pure breed are not rapidly advancing among the fanciers and careful breeders. Not until Reds are improved and refined so they will have a distinct shape of their own, breed a fairly uniform color, and each variety breed as true to comb as other varieties, will they rank with other pure breeds. If this be not done, they will fast lose ground among all but market producers. Nothing but an ideal Standard that is definite and exact will bring this about. It is for the interest of all breeders of high-class Reds that a Standard shall be adopted that will enable any one to distinguish high-class from low-grade birds. Such a Standard would protect both breeder and buyer. The breeder of choice stock would secure better prices, and all breeders would be induced to improve their stock. In no case would such a Standard prevent the sale of unimproved meat and egg stock for what it is. It would interfere and work hard ship only upon those who either ignorantly or intentionally sell mixed Reds for carefully bred specimens and thus hinder their advancement as a pure breed.—Samuel Cushman in the Poultry Monthly.

(Concluded Next Week.)

Hubrey's Great Hen.

Neal Munro, of Hubrey, near London, owns a hen of the Black Spanish breed, which is 16 years old. Eight years ago she changed her glossy black coat to one of the purest white; two years ago she became half black and half white, and last fall she again became pure white.—Canadian Poultry Review.

—Pigeon men and hen men should push the American Fancier. Advertisers claim they get better results than from any other paper.

State Agent For The Star Incubator Company.

New Laid Eggs In the Winter.

Though there has undoubtedly been great improvements in the poultry industry in this country of recent years, the fact still remains that it is most difficult to obtain new laid eggs, either in town or country during the winter months. Even when one can, as a favor be allowed to pay five cents each for eggs called "new laid," it is rarely that they come up to the description. Under these circumstances it is a pity that fowls are not much more generally kept by the ordinary householder, for there are thousands of people who would not only find poultry keeping a most interesting amusement, but who would also appreciate the luxury of really new laid eggs, laid by their own hens.

There is a common idea that fowls can only be maintained in health where there is a large grass run, but this is quite a mistake. A few hens confined in a small yard, if fed properly and kept clean, will lay more freely than those that have an unlimited range and usually being in more sheltered quarters, they are more likely under those conditions, to lay in the winter than farm poultry. It is not an expensive business to wire off a corner of the back garden and put up a small house. A wooden house for half a dozen fowls, needs only a few dollars, and wire for the run is very cheap. The house must have ventilation provided at the top above the level of the perch. Any old box with a little well broken straw in it will do for a nest. The floor of the house can be made of earth beaten hard and level. A sprinkling of dry ashes under the perch will enable the droppings to be removed with a trowel in a few seconds, daily. A portion of the wire run should, if possible, be covered so as to afford protection from the rain, and under this should be placed a good sized box of dry sand or sifted earth. In this the fowls will clean themselves, a great essential, conducing immensely to their health.

The feeding of the hens is a very simple matter. There must be a warm breakfast of meal given as soon as the birds are off the perch, as can be managed. This meal should be composed of middlings and barley meal in equal parts, mixed into a stiff paste with hot water, any scraps of meat, etc., from the house, can be added and stirred in with it. At noon some cut grass, cabbage leaves or other green food must be given, and before the birds go to roost some grain, such as wheat. Poultry mixtures of various grains are not good, neither is all corn, except a handful or two occasionally of the latter by way of a treat. It is most important that the fowls should only have as much at each feeding as they will eat greedily, none must remain over. In cold or very wet weather, a little pepper may be added to the meal. There must always be plenty of fresh water for drinking.

As to the breed of fowls for eggs in the winter and in small runs, the Golden and Silver Wyandottes will be found as good as any. They are very handsome, excellent layers, and lay a good sized tinted egg. It is important to have young hens, as old hens cannot be relied upon to lay in the winter. So pullets hatched the previous March, should, if possible be obtained. No male bird is necessary, and in his absence there is no annoyance of cock crowing to neighbors. Sometimes the hens will look red about the face and comb, but still do not lay. A slight change of food will generally produce the desired result. Some buckwheat instead of wheat for supper, ground oats instead of the other meal for breakfast or a little sulphate of iron in the drinking water for a few days, will often be found satisfactory.

A. V. MEERSCH.

THE PIGEON STANDARD just issued by C. E. Twombly, editor of the Pigeon News, is a book that fills a "long felt want." It is well gotten up, contains a number of good illustrations, and is indispensable to every fancier of pigeons. Price, 50 cents. Orders filled through the office of the American Fancier.

What Four Light Brahmas Did.

Editor American Fancier: In the American Fancier for the past few months appeared egg records of some gentlemen who had some fine laying birds. I send a record that will be hard to equal. During March, April, May and June four Light Brahma hens laid 349 eggs, viz: March 95; April 95; May 93; June 86. Total for four months, 349. Each hen's weight was 8 pounds, so you can see that they were big hens. During that time one hen wanted to set but was broken up in two days. During the same four months this same pen averaged the sum of $17.20. I sold 15 settings for $1 a setting and the rest (11 dozen) for 20 cents a dozen, which would be $2.20, and I keep nothing but big breeds for there is more money in them for the market. I keep the Light, Dark and Buff Brahmas, White and Partridge Cochins.

EDWARD NOMILE.

Salamanca, N. Y., July 5th, 1901.

To Members Of The Indian Game Club.

The American Indian Game Club will offer the following special prizes at the poultry show to be held in connection with the Pan American Exposition: Sweepstake cup for best cock, hen, cockerel, pullet and pen, value $1; Bicknell and Whiting for most typical cock and hen, cup, value $25; Club for most typical cockerel and pullet, cup, value $25; J. S. Cleveland, Fox Lake, Illinois, pen and ink sketch of the four winners in the open single bird class; H. M. Carpenter, Sing Sing, N. Y., for best cockerel, cash $5; Club for best pullet, cash $5; John Skinner, Herman, Nebraska, for cock or cockerel with purest yellow beak and legs (must win in open class), cash $5; H. A. Kirby, Providence, R. I., offers silver cup, value $25, for best pullet hatched from eggs purchased from him, and $10 in gold additional if she wins 1st in open class; Grant M. Curtis, for best exhibit over 90 points, cash $10; Poultry Monthly, Albany, N. Y., offers advertising space as follows: ⅛ page 1 month, for most typical specimen, male or female (perfection of color not to count), ⅛ page 1 month, to exhibitor coming longest distance, who does not win higher than 4th, ⅛ page 1 month, to exhibitor winning least number of 1sts; American Poultry Journal, Chicago, Illinois, 12 inches ad space to be used in any three months to the largest exhibitor of Indian Game from west of Ohio and east of the Mississippi river.

The above specials should be very tempting to breeders of Cornish Indian Game, and I trust we shall have the largest show of these birds ever seen in America. Come out and bring your best, you will be used well and your favorites well taken care of.

Pursuant to an order from President Richardson, I hereby appoint a special meeting of the Club to be held October 25th at 2 p. m., in exhibitors' club room, Agriculture building, Pan-American Exposition. Many points of vital interest to all breeders of Indian Game will be discussed and points taken up that will be a benefit to all. I wish to urge every member to be present, and especially invite all interested in the Indian Game, Cornish or White, to meet with us. Hoping to meet you I am yours fraternally,

C. S. WHITING,
Sec'y-Treas. American Indian Game Club.

July Chicken Talk.

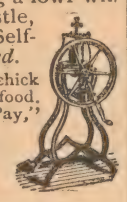
From now on every day the early hatched cockerels are kept in most cases in unnecessary expense. In many instances it will be more profitable to let the surplus cockerels go when they are three months old. If they have been properly cared for they will then sell at proportionately better prices than at a later period. Save some of the most promising ones for breeders. Select them by size, rapid growth and robustness rather than by Standard plumage requirements.

Don't imagine the moulting fowls can get all the food they require, however good or extensive the range provided. They need a good, nourishing diet, and the simple "hustle-and-pick up" plan where there is a large flock is evidence of penuriousness and cruelty on the part of the poultry-keeper. Good sense should suggest that in hot weather they do not need a liberal supply of corn. Boiled oats, a little good wheat and an occasional supply of cooked lean meat is what they should have.

Keep the male birds by themselves from now until eggs will again be needed for incubation. The hens will be much better off and they will lay just as many eggs. Eggs may be put away from the hens that are without male company and they will keep a long time. Pack them away with the big ends down in dry oats or sand. Stand the eggs as near together as possible without contact, sift over each layer sand or oats, so that there will be a couple of inches for the foundation of another layer. Do this until the barrel or box is full. Keep them in a cool, dry cellar. It is not necessary to turn the box or barrel containing the packed eggs. Eggs have been kept in this way for three and five months and found sound and palatable. There is nothing in this method of packing to impart flavor, as is the case when eggs are packed in lime solution. There being no germ of life in the egg there is no musty taste. Try it and be convinced.

Handle the eggs in the incubator as little as possible. Sweaty and dirty hands stop the pores of the eggs and may also impart deleterious odors when such eggs are returned to the incubator heat. There is not enough stress put on the importance of having strictly clean hands when handling eggs for or that are in course of incubation. The incubation of eggs may be stopped by what seems a very insignificant cause. Avoid handling as much as possible.

An occasional feed of charred corn is greatly relished by the flock and is more valuable than any of the so-called health powders. It is good for both fowls and chicks and they should have it at least every 10 days.



The varied diet prevents the clogging of the digestive apparatus and helps keep the appetite keen. Fowls tire of a single diet and will soon become sick if it is persisted in, no matter what it is. The nests should be placed outside the henhouse when coaloiling the house. The oil should be poured into all crevices to insure the destruction of the nocturnal mite. Keep the nests in the air and sunshine until all the odor of the coaloil has evaporated. An egg when first laid —while it is yet warm—will absorb enough odor of oil to spoil it.—Baltimore Sun.

Stearns New Model No. 7

Ball Bearing Bone Cutter

Back Geared Three to One.

It is geared to save power, making it the easiest running, fastest cutting bone cutter ever built. It will cut anything a fowl will eat—green or dry bone, gristle, meat, corn or vegetables. Self-regulating. *It cannot be clogged.*

Green cut bone brings the young chick to maturity quicker than any other food. Our book, "How to Make Poultry Pay," explains how and why. Sent *free.*

Box 12, Syracuse, N. Y.

Comfort For Fowls.

Comfort for the fowls is synonymous with profit; every day I come nearer to believing that this is strictly true. In winter, in summer, in spring, the case is the same—the comfortable bird is the one that is giving the profit, and the most profitable thing the owner of fowls can do is to go over, very carefully, the conditions which cause discomfort to the flocks and to use every effort to overcome these sources of loss.

Only yesterday an expert poultry raiser was asked: "Come, now, do you really believe there is money in poultry?" The querist was a lifelong dweller on a farm and was in earnest in putting the question. "Yes, if you put it in," was the reply. This was by no means intended to mean that only the money put into poultry is taken out. It is seriously true that not only money, but work, attention, care and thought, must in the majority of cases be put into poultry as into other lines of work before the large profit appears. An occasional person who has fallen into conditions favorable to the stock (such as the possession of a warm, straw-strewn barn basement, sunny and roomy), or who has chanced to follow the best lines of treatment without knowing that they are the approved methods, will boast that his hens outlay all those near him, and they get no care at all. But this is exceptional luck and nothing else. In fall, winter and spring a far greater source of discomfort than cold is high winds. These are not only the source of discomfort, but of disease. Good shelter, then, is a source of profit. It may be cheap shelter, but if it serves the purpose it means money. For wind, more than cold, is the cause of a lack of eggs during the cooler months.

The moulting period is one of more or less discomfort. Whatever causes irritation or discomfort will soon tell on the egg yield. This is one of the reasons for lack of eggs during the moult. It is one of the reasons for the listless, unhappy, half-sick appearance of the moulting hen. Scale on the legs of hens is considered a minor evil. It is always a source of more or less discomfort to the birds, and, if left to run long enough, will finally cause lameness, and, in aggravated cases, death. It cannot then be otherwise than an added straw in the load of discomforts that weigh upon the layer, and which culminate at the period when prices begin to go up and the owner wants every hen to do her duty. Has she any duty toward the short-sighted owner who has allowed her to be harried by wind and scale and lice until life is one long series of discomforts to her?

A woman once told me that every time she went to the henhouse she was obliged to put off the clothes she had worn there before doing anything else, for the mites were there literally "in piles." Those familiar with the habits of these insects will know that this is no exaggeration, yet the husband vilified his hens daily because they laid so few eggs.

The downy chicks suffer misery and give up the attempt to live because of ignorance or neglect on the part of those who have made it impossible for them to seek freely the conditions of comfort. Some I have seen inclosed in yards where no shade could be found. Other owners, having a dim idea of the value of shade, put the chicks in sunless quarters and invite diphtheria and roup to take their heavy toll of dead bodies. Both sun and shade are essential.

A few days ago I stood beside an incubator maker and heard him say that if he had his way he would never make another brooder like the one we were considering. This brooder had much glass in the top, and the maker affirmed that it would kill many of the chicks late in the season unless the user knew enough to keep the cover raised high. "But what can we do? People have a notion that glass in a brooder is good, and a lot is better. The call is for a brooder with a glass top, and we have to furnish it."

It is quite true that an over-hot brooder means discomfort to the chicks, just as surely as does a cold brooder. It leads to deaths as surely. Manufacturers have obviated the worst trouble along this line by furnishing a brooder with two chambers, one of which is always several degrees cooler than the other. This was a big advance step in brooder making, for it made it far less possible for the ignorant to err, as well as far more safe for all. For even those who knew what was requisite could not always control the weather conditions to the point of safety to the broods.

"Does well in confinement." How often we see the phrase used in describing a breed. Some breeds are less affected by the discomforts of being behind the bars; this is the whole story. Because less affected, they are more profitable and live longer; hence are said to thrive in confinement. Confinement, as a matter of fact, is always more or less of a discomfort, though birds do become so wonted to it that they are not unhappy. But as it is virtually impossible to supply their food as nature does, there is always a little lack. This being the case, those who work in confined spaces can never rival the farm fowl wholly if those on the farm only make use of their advantage.—C. S. Valentine in N. Y. Tribune.

PIGEONS.

Lofty Thoughts of the Editor

Those wishing to get their birds through an early moult, will do well to stop breeding operations this month. It will also be the means of less colds among the birds this fall, as late birds are always more susceptible to such than their earlier hatched brothers and sisters, and as medical men are now telling us that colds are contagious, based upon the "germ theory," we can see how, after taking all apparent precautions, many get colds from coming in contact with one which may have a cold. For showing at early shows, such as the Pan-American will be in October of this year, all raised now will be through moult sufficiently to be in good show form by that time. For mid-winter shows birds raised in July and August will be in show form. Many will want to breed later than now, for after a very good season in the latter part of March and April, we had one of the wettest Mays that has ever been known in this country, the result being a very poor round of young, and many that were hatched earlier passed in their chips, so to get a full round of show birds, many will have to go a bit later in the breeding season in order to do so. In short feathered breeds this will not do any particular harm as far as results in the show pen are concerned, but I am afraid that long feathered birds will not be as good on account of their not being the number of June birds to pick from.

—

This is also the season of the year when some sort of shade is very essential to the production of an even moult. If a bird be exposed to the hot rays of the July sun, and he should moult slow, one cannot expect that evenness of color that can be got by keeping them in a pen where the full rays of the sun cannot strike them. In my own pens I have window shades, and during the hot part of the day the birds are kept in, shades down. Then in the aviary I have grown a crab apple tree over the wire and pruned and tied it in such a manner that it covers a good portion of the top, affording an excellent shade to the birds. This is very important to the production of high-class birds, which belong to a breed where color is a strong factor in the placing of the winners, such as Tumblers, Magpies, Jacobins, Colored Fans, Turbits, and many others. We recall to mind a winner at last winter's shows which was remarkable for evenness of color and paleness of eye cere, which result was brought about by the bird having been brought up from just before moult until it was placed in the show pen in the cellar of the person's house who showed it. Tumbler men have long practised such methods, and it's such little details which, in addition to remarkable color qualities in the breed, go to bring about such beautiful color as cannot be found in any other breed of pigeons.

—

Mr. Jos. Gavin in Fur and Feather reprints considerable of an article by the Rev. Mr. Lumley as to what is and what is not the Tumbler par excellence, and while the writer knows of no one better qualified to speak of pigeons in general, we think it a far fetched argument to use this gentleman's ideas as to what should be and what should not be in a breed over which he has had no particular opportunity of becoming an authority, having never been a breeder or exhibitor of many varieties of the family, nor having been recognized as a specialist judge either. If the true type of the Tumbler is wanted, there are many in England much better qualified to give the same than the

gentleman referred to. I remember some years ago reading an opinion of Mr. Lumley's that the Long Faced Tumbler should be long in face, but since then I have been pleased to see he has somewhat moderated his ideas as to what constitutes an ideal Tumbler in head properties. A good rule for Tumbler men is to get them as good headed and eyed as possible, short in feather, plenty of style, and let the "other fellow" have the large, coarse ones, and while those who have an inferior strain may try to make out that the winners are all wrong, a majority, and a large one at that, do not recognize a class of birds that show in their make up a type nearer the Magpie than the Tumbler. A good rule on type for Tumbler fanciers is, to go for just the opposite of what the Magpie breeder wants, always bearing in mind that the Tumbler is a cobby bird from every point of view and in every part of his anatomy, with the crowning characteristic—a pure pearl eye.

F. W. GORSE.

Highlandville, Mass.

Five Hundred Mile Homing Pigeon Race.

Editor American Fancier: The first of the fifth annual series of long distance races as arranged by the Metropolitan Concourse Race Association of New York and vicinity engaging 356 birds and comprising entries from fanciers located in Elizabeth and Newark, N. J., Manhattan, Brooklyn, Staten Island and New York was flown from Statesville, N. C., on Monday, June 24th. The birds were liberated by R. K. Murdock at 5 a. m., in a light west wind. At home and along the course as far down as Virginia, the wind all day was blowing strongly from north-west to north north-west. This made it hard going for the birds and only (5) five birds arrived home day of toss.

CHAS. BANG.

South Beach, July 5th, 1901.

The ancient Romans had their gods, their superstitions and their sacrifices. They had also great regard for omens. Many ordinary occurrences, in themselves trivial, were reckoned by the people ominous for good or evil. But their great men—not always good men, but leaders in their day and generation—knew how sometimes to speak a word in the nick of time and ward off the evil effects of an omen. To stumble was ominous of misfortune; so when Cæsar accidentally fell to the ground as he landed in Africa, when on one of his trips for conquest, he promptly exclaimed: "I take possession of thee, Africa!" On one occasion Claudius, at the time of the first Punic war, threw omens to the winds; for, when the sacred chickens, which the priests had cooped up for religious purposes, would not come from their cages to eat their food, he pitched them into the sea, saying: "If they won't eat, they must drink!"—Poultry, England.

White Belgian Hares.

Editor American Fancier: With much interest we have been watching the controversy on White Belgian Hares between Mr. Alfred Critchett, Sr., and H. S. Babcock. One can always put it down solid that Mr. Babcock knows what he is writing about, and when he said there were White Belgian Hares he told the truth Mr. Critchett is not the only one in England who says there is no such a thing as a White Belgian Hare. Mr. Robert Colt, well known among the fanciers of America, who is now in England buying up Belgians for Americans, in a letter to us several months ago said that he had spoken to six of the leading breeders in England and none had ever heard of a White Belgian Hare, and he also says a black one only comes in an age. Now, it does seem so strange that just as soon as the rufus reds come to America they are up to all kinds of tricks and give us plenty of blacks and a few whites and blues. Mr. P. E. Crabtree, a leading Belgian Hare judge of this country, has this to say in Field and Stream, June Number, Page 251: "I give them awards as white rabbits, but not as White Belgian Hares. They possess only one characteristic similar to the Belgian—that of shape." Dr. Platt, as good authority as there is in the world on Belgian Hares, said of our whites at the late New York show that they had all the characteristics of the rufus reds. Now, the question is this: Is Mr. Crabtree writing of some other white hares aside from what we have seen? He further says: "They are very pretty and always command much attention, and as a fancier's animal should be a great success, but until the time comes when they carry more than one of the characteristics of the Belgian I could not award them a premium as White Belgians." Dr. Platt and other good judges who saw them at New York said they had all the points Mr. Crabtree asks for, so no doubt when he meets some of our whites at a show he will judge them as White Belgian Hares.

Is it not a fact if the black and blue Belgians that sport from the reds have the characteristics of the reds, then the whites have the same, and no one will say the blacks and blues have not. If the whites had come from a cross used in the make up of the reds, then they might be given some other name, but since they are pure albinos and not from a cross we say they are as much a Belgian Hare as the white elephant, deer, squirrel, rat, mouse, or any albino in the feathered race are what their colored parts indicate. Not far from the writer's home lives a lady who owns a pair of white squirrels. These were caught in the woods in a nest of six young squirrels of the grey variety. Go tell that lady that they are not squirrels and what will she think of you?

There is much work done against all things new when first introduced. In the Buff Leghorns we had much experience along this line, being the first to own, advertise or show a Buff Leghorn in America. How the breeders of the other varieties did fight them and said all manner of evil against them. Today they stand at the head of the list of our fancy fowls.

THE GREAT

Cambridge Fair and Poultry Show.

AMERICA'S LARGEST POULTRY EXHIBIT IN 1900.

The first real Fanciers' exhibit for 1901 will be at

CAMBRIDGE, NEW YORK, AUG. 27-30, 1901.

Prizes $3.00 and $2.00 for Pens; $2.00 and $1.00 for Singles. Old and young compete separately in pens. Birds in pens may be entered in the Single Classes. Water Fowl, Turkeys and Rabbits entered singly. Money prizes same as fowls.

Expert Judges: J. H. Drevenstedt, Johnstown, N. Y., Sharp Butterfield, London, Ontaria, B. W. Mosher, Johnstown, N. Y., F. G. Bean, Fairview Village, Pa.

Send to the Secretary for handsome half-tone illustrated Premium List, examine Poultry Department and place your exhibit with us. 10-15

ELIOT B. NORTON, Secretary, Cambridge, N. Y. HERMON D. QUA, Sup't, Shushan, N. Y.

BELGIAN HARES

IN ALL THEIR PURITY BOTH IMPORTED AND DOMESTIC.

Does with nursing litters a specialty and cheap.... | I have a lot of very fine young Bucks from pedigreed imported stock for **$3 Each and Upwards.**

CROYLAND RABBITRY, THOMAS WHITE, PROP, INDIANA, PA. 91-16

200-Egg Incubator for $12

The wonderful simplicity of the **Wooden Hen** and the greatly increased production forced by its immense sales, makes it possible to offer this perfect hatcher for $12. Guaranteed to hatch as large a percentage of eggs as any other hatcher at any price. Self-regulating and fully guaranteed. Send for the free illustrated catalogue. GEO. H. STAHL, Quincy, Ill.

So it will be with the White Belgian Hare. Mr. Converse, of the Pan-American Exposition, had given us good promises of classes for whites, but when the time came he did not give them classes. No doubt he was influenced by some one deeply interested in the rufus reds. But Mr. Converse has written us that Rule 10 will give them all the recognition the reds will have, and we hope to see a nice exhibit of them there. If our friends across the pond never saw any White Belgians they should come to the Pan-American Exposition. We were glad to see six of the largest shows last winter give them classes.

We are interested in the controversy between Mr. Critchett and Mr. Babcock, for if Mr. C. is right and Mr. B. wrong then we are the "unmitigated liar" Mr. Babcock refers to, and there are at least twelve other liars of the same grade in this country, who have written to us since last October stating they had from one to three White Belgians come in a litter from reds, and in some cases from the most high grade English stock, pedigreed and registered and highly scored by the most reliable judges of this country. Is it possible that all of these fanciers are off in grey matter, or had they taken too freely of "family disturber," as Mr. C. suggests, and had mistaken red for white? Mr. Zimmer, of Gloversville, N. Y., who is one of our leading judges, had three whites come in a litter. A buck from this litter can now be seen at our rabbitry, and besides we have White Belgians from at least eight or ten different sources, all albinos bred from albinos, and the fact is this, if men who are old and experienced breeders of Belgian Hares in England never saw or heard of a White Belgian Hare then we are one ahead of them along that line, for we have them in America. We have stock that came from a trio of whites imported direct from England inside of two years, so at least three whites were born in England and shipped over here without Mr. C. knowing it. He asks the question, "How could a white come from a red?" We can't tell him how, neither can we tell him how a white crow comes from a black one, or how a white and a red flower come from the same plant, but the fact still remains they do do it. When we first advertised White Belgians last October and ever since then all who had an albino from their reds and saw an ad. wrote to us. We have those letters and shall be glad to give the addresses of the parties who had those white hares come in their litters. We are a member of the American Belgian Hare Club, and if the White Belgian Hare is a fraud then we ask that club to kick us out and brand us as a fraud and thief.

It, however, is a fact that often those who kick when any new breed is being introduced to the public have an axe to grind. But, boys, it is well to practice on kicking now, for there will be a kicking time. It is not only the White Belgians that want room. The Blacks and Blues are here, too, and we will say right here the Blue Belgian Hare is one of the most beautiful animals we ever laid eyes on and are bound to become great favorites in this country. Then are coming the Flemish Giants and Black Flemish Giants, and last, but not least, the Silver Grey and Silver Blues. A leading western judge writes us that all of these will go into the Standard. The American fanciers want a variety in hares as well as in other pet stock and will have it. So there will be a kicking time soon.

PLYMOUTH ROCKS.

I HAD a male and female of Barred P. Rocks score 93½ in winter shows last season. White Rocks, white as snow, 20 hens for sale at $1.50 each. Barred Rock hens at $2 each. R. C. Brown and White and S. C. Brown and White Leghorns, the kind that win at New York and Boston. The finest of White Wyandottes. W. W. KULP, Pottstown, Pa. Box 10. 8tf

THE BEST MADE.—Temkovits' Barred Rocks always win. Never have they been exhibited without winning. Eggs from special matings for June and July, $1.50 per 13. Young stock for sale after Sept. 1st. Catalogue. M. J. TEMKOVITS, Box 901, Brooklyn. O. 05–16

CLIFFORD W. BEMAN, Box 80, Port Dickinson, N. Y., offers Buff Plymouth Rock eggs from best breeding yards, headed by 1st prize males at New York State Fair and Atlanta, Ga; and females include 1st prize birds at New York City, Philadelphia, etc. We have won Buff color specials 4 times at New York and Boston; and New York City, 1900, special for best ten birds. We will sell 10 birds for $10 or 5 birds for $6. Eggs half price. Circular free. 66–17

WETZEL'S Blue Ribbon Buff Rocks are the best. Geneva winnings, 1900, 1 and 2d cockerel, 1st and 2d pullet, 1st and 2d hen, 1st pen and all specials, 35 competing; Middletown, '01, 1st cockerel, 1st, 2d and 3d pullet, 1st hen, 1st pen and specials, 61 head competing; Cleveland, 1901, 1st cock, 1st 2d and 3d cockerel, 1st pullet, 1st pen, Buff Rock Club's silver cup, 58 head competing; also Association's $10 gold special for best 10 P. Rocks in the show, all varieties competing. Eggs $5 per setting straight. Fowls $5 each and upwards. FRANK WETZEL, Painesville, O. 99–37

BUFF ROCKS.—Better this year than ever before. In addition to my own prize winning stock, I have bought some of the best birds money could buy; birds that have won prizes, or bred from prize winners in most of the leading shows. They are as fine a lot of birds as can be found in this country. Eggs for bal. of season, $2 per 15. RALPH J. WEIR, Cambridge, N. Y. 85–36

HIGGINS' Buff Rocks won 1st prizes at the largest shows in America: At Boston, Hagerstown, Fitchburg, Clinton; in the hands of my customers at Madison Square Garden and large shows in the west. Have some of the grandest matings this season I ever owned. Will sell eggs from same pens as I use myself at $3 or two settings, $5. H. W. HIGGINS, Orange, Mass. 33–tf

I BRED White Rocks 11 years. Have them better this season than ever; pure white, low combs, yellow legs, correct size and shape. At Sanatoga, on 5 entries won 5 1sts. At Harrisburg on 4 entries won 4 1sts and all specials. 200 birds for sale. Eggs, $1 per sitting; $5 per 100. 60–tf D. L. STAUFFER, Spring City, Pa.

MY BUFF PLYMOUTH ROCKS have won for me at Madison Square Garden, Boston, Pittsburg, Washington, D. C., and other great shows, proving their quality. Prices are right, too. Stock and eggs for sale. Circular and show record free. MILES LOUER, East Onondaga, N. Y. 81-32

WHITE PLYMOUTH ROCKS.—W. C. Pierce & Co., 1st, 2d, 3d cocks 96¼, 95¼, 95¼; 1st, 2d, 3d (tie), 4th hens, 96, 95½, 95¼; 3d, 4th cockerels, (tied 2d), 95¾, 95¼; 1st, 2d, 3d, 4th pullets, 96¼ 96¼, 96¼, 96; 1st, 2d pens, 192 9-16, 191 5 16; also best display. This was made in hot competition, 78 birds in class. This record with our wonderful winnings at Chicago last year stand alone and unequaled on this variety. W. C. PIERCE & Co., Indianapolis, Ind. 73–24

BEAN'S BUFFS are the real winners as the following records for 1900 will show: At Cambridge, N. Y., one 1st, four 2ds, three 3ds; Watertown, N. Y., two 1sts and three 2ds; Poughkeepsie, three 1sts and three 2ds; Dryden, N. Y., four 1sts and two 2ds; Trenton, N. J., one 1st and two 2ds; York, Pa., five 1sts and four 2ds; Lancaster, Pa., four 1sts and two 2ds; Hagerstown, Md., in the hottest competition of the year, four 1sts, two 2ds and three 3ds. This is an unequalled record. Write for prices on show and breeding birds. All my stock is farm raised. Address F. G. BEAN, Fairview Village, Mont. Co., Pa. 73-24

"PARALLEL(=) BAR" Rocks.—Eggs during March and April, $2 per 13; $8 per 100. Stock direct blood of Gardner, Thompson and Montauk. New York winners. My birds have won in good company and chicks from these eggs will win for you. Send for leaflet. H. T. BROWN, Box 471 a, White Plains, N. Y. 79–30

WYANDOTTES.

MADISON SQUARE Garden Winners. We have won 1st prizes two successive years at the above show on our White Wyandottes. 1901 won 1st hen, 3d and 5th pullets and 3 specials on 6 entries, 1900, won 1st cock, 3d hen and 2 specials. For the balance of season, will sell eggs at $1 per 13. Booklet free. ALLEN C. ROBERTS, Spring City, Pa. 02–tf

JODREY S. L. Wyandottes won all 1sts at Boston, 1901, and 22 regular and specials 1900. Stock for sale. Pens, $8; trios, $5. No description—refund money if not satisfied. Orders for fall and winter shows booked now. JOHN C. JODREY, Danvers, Mass. 09–tf

ALPHA STRAIN Silver Wyandottes. Winners wherever shown. Have good combs and shape, standard weights and plumage. They are line bred and good layers. Look up my record in the Fancier. Eggs, balance of season, $1 per setting. WM. BINGLEY, 103 McKinley St., Torrington, Ct. 75–26

"WHO KILLED COCK ROBIN?"—Robbins' Buff Wyandottes are the real Buff with solid Buff wings and tails, and have won prizes in Boston, Cambridge, Rochester, Syracuse, Troy and Poughkeepsie, N. Y.; Brattleboro, Vt. and Philadelphia, Pa. I have all my prize winners in my yards and will sell eggs at $5 per 13 straight. Stock for sale at all times. Satisfaction guaranteed or money refunded. R. B. ROBBINS, Cambridge, N. Y. 42–tf

PISER'S BUFF WYANDOTTES are always winners. One year ago at Cambridge, N. Y, in the hottest competition ever known, I won 2d, 3d pen old, 1st, 2d pen young, 1st, 3d hen, 1st, 2d, 3d cockerel, 1st, 2d, 3d pullet. My customers are doing the same all over the country and in Canada and England. A pen from my yards will breed you winners next season. See add in display column. L. C. PISER, Shushan, N. Y. 77tf

DR. SANBORN'S BUFF WYANDOTTES won 1st on pen, with 7 pens in competition, at his only exhibit this season, at South Farmingham. Also 2 2nds on single birds. No better blood in the East. Average egg yield, 99, 196 eggs. Eggs $2 for 13, $5 for 40. Cockerels $5, pullets $4 up. N. W. SANBORN, Wellesley Hills, Mass. 87–38

BUFF WYANDOTTES.—W. C. Pierce & Co., 1st, 2d cocks, 94¼, 93; 1st, 2d, 3d, 4th hens, 94¼, 94¼, 94¼, 93½, 1st, 2d cockerels, 92¼, 92, 1st, 2d, 3d, 4th pullets, 94, 93¾, 93, 93; 1st, 2d pen, 186 15 16, 184 9–16. There is no use mentioning the above the scores speak for themselves. W. C. PIERCE, & Co., Indianapolis, Ind. 75–26

SILVER Wyandottes as good as the best, four regular and one special prizes at Madison Square Garden, 1901. My birds are large size, clear centers and good layers. Males in breeding pens above Standard weight. A few cockerels for sale. Eggs, $2 per setting, 2 settings, $3. HECTOR W. MILLSPAUGH, Walden, N. Y. 72–tf

BUFF and White Wyandottes. My birds were prize winners at Johnstwwn. In White Wyandottes, four entries, won 2d cock, 3d hen, 2d ckl, 1st pullet and special for best cock, hen, ckl, and pullet. At Troy, 6 entries, 1st cock, 1st hen, 1st pullet. At Matteawan, in Buff Wyandottes, 5 entries, 1st cock, 1st hen, 1st pullet, 1st pen. All this in hot competition. Eggs for special matings, $3 per 15. Other matings, $1 per 15, $5 per 100. Catalogue free. EDGAR BRIGGS, Poughkeepsie, N. Y. 87–12

WHITE WYANDOTTES.—W. C. Pierce & Co., 1st, 4th cocks, 94¾, 93¾, (tied 2d); 1st hen, 96½; 1st cockerel, 95, 4th pullet, 96¼, (tied 1st and one other scoring 96¼ that did not win a place); 1st pen, 191¼. Here again in hot competition we won the big end of the prizes, especially the first, losing only one and tieing in score with this winner. W. C. PIERCE, Indianapolis, Ind. 75–26

THE WINTER LAYERS of the 19th century are Geo. Bradley's White Wyandottes. Have been bred for layers for generations, standard in weight, white in plumage, pullets lay at six months old. Eggs, $2 per 13; $5 per 39. Stock for sale at all times. Correspondence a pleasure. 39tf GEO. BRADLEY Dryden, N. Y.

BURT'S Buff and White Wyandottes won at Fitchburg, 1900, Hawkins judge, 4 1sts, 4 2nds, 2 3ds and 9 specials; at Athol, 1901, Peirce judge, 4 1sts, 1 2d, 2 3ds and 11 specials, 89 White and 42 Buff in classes. Eggs, $2 per 13, $5 per 40. 83–34 J. E. BURT, Athol. Mass.

WYANDOTTES.—Bean's Whites are winners. At Cambridge, N. Y., Watertown, N. Y., Poughkeepsie, N. Y., Dryden, N. Y., Trenton, N. J., York, Pa., and Lancaster, Pa., they won 24 firsts, 4 seconds and 1 third. There is no better stock in the country, size, shape and plumage being all there. Show and breeding stock for sale. Address F. G. BEAN, Fairview Village, Mont. Co., Pa. 73-24

FIRST PEN AT PHILADELPHIA, 1900, were Bred, Raised and Exhibited by JESSE B. RIGGS, 302 Water Street, Baltimore, Md. 35–86 Cockerels for sale. Eggs $3.00.

die by being lousy than from any other cause. You can talk about improper care and food, lack of green food and grit, but, when looking for the root of the trouble look for lice, and when you find them look into the merits of Lambert's Death to Lice Remedies. Rev. H. H. Purrington, Mt. Vernon, Maine, writes: "We all use Death to Lice and find it most satisfactory." The Norton Poultry Yards, Dallas, Texas. writes: "We have been using your Death to Lice for the past four years and it has given entire satisfaction."

MORE CHICKENS

have head lice than most poultry keepers realize. Some think that these little pests are pin feathers on the top of a chicks' head and do not take the trouble to examine them closely until the broods begin to die off. One Massachusetts fancier says that it cost him hundreds of dollars to learn this. Death to Lice Ointment is made especially for the extermination of these little blood suckers, without injury to the little chicks. 100 doses 10c postpaid.

MORE CHICKENS

than should go into two coops are often crowded into one. The lice will then crowd into these small quarters and assist to make the nights long, hot and miserable. The little mites or spider lice crawl out of the cracks and crevices and extract more blood from the chicks than they can make during the day. Charles L. Evans, Wood River, Neb., writes: "I have given your 'special' a thorough trial. I had a henhouse that was polluted with mites. I mixed one (four) ounce box of special to one gallon of whitewash and gave it a thorough whitewashing. I now defy anyone to find a louse about my hen house."

MORE CHICKENS

properly cared for mean more money. Proper care means a liberal use of Lambert's Death to Lice Remedies as well as suitable food and housing. No poultry keeper ever failed because he put too much money into Death to Lice. Many do fail because they do not keep their flocks free from vermin. The most successful money-making poulterers are those who use the most Lamberts. We have remedies for all kinds of lice. on anything and everything. We put it up in all sizes of packages to suit all kinds of people. We have all kinds of good testimonials as to its efficacy.

PRICE LIST.

Death to Lice Powder 10 and 40 cents by mail. Large sizes 50c and $1, by express from here or nearest agency. Death to Lice Ointment, 10c and 25c by mail. Death to Lice Special, 10c and 40c by mail. Samples of one each of the above 10c sizes at one time 25c. Death to Lice Liquid, 1 qt, 35c; 3 qt, 60c; 4 qt, $1, from here or from nearest distributing point. A 64 page illustrated book mailed free. STUPENDOUS FORTUNES MADE IN OIL!

Rockefeller with his hundreds of millions easily heads the list, but there are scores of others unheard of whose fortunes range up in the millions.

California is rapidly coming to the front in Oil Production. The past two years has seen a remarkable advance in value of Oil Company Shares, being all the way from a few dollars to $100, $200 and $300 a share, and in the Home Oil Co., to over $4,000 a Share.

Hundreds of people have made more money the past year in California Oil Fields than they ever dreamed they would be worth.—[FINANCIAL RECORD, Oct. 3, 1900

One company paid last year $175,000 in dividends on a capital stock of $100,000, and land which could have been bought a year ago for $5 an acre, has by virtue of oil advanced to $30,000 an acre. —[LOS ANGELES HERALD.

More fortunes will be made in California oil investments within the next two years than the most enthusiastic would have dared to predict. The time to buy oil stocks is before the price shoots up to hundreds and perhaps thousands of dollars a share.

—[FINANCIAL TIMES.

A GILTEDGED INVESTMENT.

MT. SHASTA OIL AND DEVELOPMENT CO., OF SAN FRANCISCO, CAL.

A Legitimate Company with men of honor and ability at its head. -;- Work rushed night and day. Development work is being pushed as fast as men and money can do so. -:- Oil may be struck at any moment. The quality found in this district is of a very high grade, commanding the highest market prices.

GREAT FORTUNES HAVE BEEN MADE!

Hundreds, yes, thousands, have been made wealthy during the past year through wise investments in oil. We offer to the eastern public the same or a similar opportunity. Grasp it while you can. To-morrow may be too late.

10,000 Shares For Sale at 65cts. Per Share.

To give you an illustration of the rapid rise in value of oil stocks we quote the following, only a few of the vast number, and their advances were all made within one year, some less than four months.

The following will suffice to illustrate what "quick action" means on an investment and where the profits begin from the day oil is struck:

El Dorado Oil Company, first cost	$ 50	now	$ 5 00
Kern River Oil Company, first cost	1 00	now	16 00
Independent Oil Company, first cost	1 00	now	3 00
Blue Goose Oil Company, first cost	25 00	now	41 00
New York Oil Company, first cost	10 00	now	200 00
Home Oil Company, first cost	100 00	now	5000 00

Do not delay. The price may advance any day.

The officers and directors are men of sterling integrity, well known and respected in the community where they reside. They have organized and put their own money into this company, with a firm purpose to make it a success and one of the big dividend payers of the state. Gentlemen, while we advise caution, the early bird gets the worm. Stock you buy to-day for $100.00 may cost you $1,000 to-morrow, or even $10,000. Order at once.

Address the company at Oakland, Cal., or

PISER'S BUFF WYANDOTTES

I am now prepared to furnish choice breeding stock in both young and old.

Raised 1000 This Season

to select from. Particular attention paid to mating up hens for breeding.

My Customers are Winning

with birds bred from stock purchased of me all over the country.....

A list of my winnings at the leading shows would be too long to name here. Will mail on application. My best exhibit was at N. Y. State Fair, Syracuse, last September. Won

1st Pen, 2nd Cock, 1st Hen, 1st and 2nd Cock'ls, and 1st Pullet.

Satisfaction guaranteed or money refunded if birds are returned within one week. My stock has been line bred for seven years; and now bred as true as many of the older breeds.

Largest breeder of Buff Wyandottes in the world

GLOVERSVILLE, N. Y.

MUFFED TUMBLERS FOR SALE.

WINNERS IN ENGLAND AND AMERICA.

The grandest collection of winning Muffed Tumblers ever gotten together is now on sale, and can be seen by appointment and birds selected. I will sell any Muffed Tumbler I own and arrangements can be made to take the entire lot. The varieties are Blue Saddles, Black Badges, Black Mottles (Yellow Rose cock, 1st Boston and Chicago, price $15, one of the best living) and several other odd birds, all winners or will produce winners. My Tumblers possess characteristics peculiarly their own, having been bred carefully for years, and are streets ahead of any other strain. In the past five years I have bred more winners than all others combined. Stock birds sold to others have bred their best birds; why, then, waste time and money by breeding from ordinary stock, when for an ordinary outlay the best birds living can be obtained? Those who would like to win and breed winners are invited to correspond. Prices very low, but nothing in muff legs under $5 per bird. (Some as low as $2.50 in surplus Clean Legs.) Testimonials from dozens who have purchased winners in all parts of the country. Satisfaction guaranteed. State wants fully. See winnings at Birmingham, Eng. (1st and medal), Boston, Chicago and New York. While winning here I had a team of six winning at Birmingham, Eng., the greatest Tumbler show in the world, irresistible argument as to the quality of my stock. 48tf

STUPENDOUS FORTUNES MADE IN OIL.

Rockefeller with his hundreds of millions easily heads the list, but there are scores of others unheard of whose fortunes range up in the millions.

California is rapidly coming to the front in Oil Production. The past two years has seen a remarkable advance in value of Oil Company Shares, being all the way from a few dollars to One Hundred, Two Hundred and Three Hundred Dollars a share, and in the Home Oil Company to over $4,000 a share.

Hundreds of people have made more money the past year in California Oil Fields than they ever dreamed they would be worth —[Financial Record, Oct. 3, 1900.

One company paid last year $175,000 in dividends on a capital stock of $100,000, and land which could have been bought a year ago for $5 an acre has, by virtue of oil, advanced to $30,000 an acre.—[Los Angeles Herald.

More fortunes will be made in California oil investments within the next two years than the most enthusiastic would have dared to predict. The time to buy oil stocks is before the price seoots up to hundreds and perhaps thousands of dollasr a share.—[Financial Times.

A GILT EDGED INVESTMENT

SAN JOSE PETROLEUM COMPANY,

H. W. CONKLIN, Pres. L. A. SPITZER, Vice-Pres. D. A. PORTER. Sec'y.
C. A. BOTHWELL, Treas. J. C. CONKLING, Ass't Sec. & Mgr. ALLAN BRANT & F. B. BROWN, Att'ys
GARDEN CITY BANK & TRUST CO., San Jose Depository.

The officers and directors are substantial, reliable business men of San Jose. The affairs of the company are conducted on safe and proper business lines. Officers draw no salaries. Money all used to sink wells, and to otherwise develop the property. Lands consisting of 800 acres lying in Fresno-San Benito District are among the best in the State.

Oil in this district is of high grade and of a superior quality. Oil investors invited to our office. We can interest and

MAKE YOU MONEY.

GREAT FORTUNES HAVE BEEN MADE.

Hundreds, yes, thousands, have been made wealthy during the past year through wise investments in oil. We offer to the eastern public the same or a similar opportunity. Grasp it while you can. To-morrow may be too late.

10,000 SHARES FOR SALE AT 50 CENTS PER SHARE!

To give you an illustration of the rapid rise in value of oil stocks we quote the following, only a few of the vast number, and their advances were all made within one year, some less than 4 mos.

The following will suffice to illustrate what "quick action" means on an investment and where the profits begin from the day oil is struck:

El Dorado Oil Co., first cost	$ 50	now	$ 5 00
Kern River Oil Company, first cost	1 00	now	16 00
Independent Oil Company, first cost	1 00	now	3 00
Blue Goose Oil Company, first cost	25 00	now	41 00
New York Oil Company, first cost	10 00	now	200 00
Home Oil Company, first cost	100 00	now	5000 00

Do not delay. The price may advance any day.

The officers and directors are men of sterling integrity, well known and respected in the community where they reside. They have organized and put their own money into this company, with a firm purpose to make it a successful and one of the big dividend payers of the state. Gentlemen, while we advise caution, the early bird gets the worm. Stock you buy to-day for $100.00 may cost you $1,000.00 to-morrow, or even $10,000.000. Order at once. Address the company at San Francisco, Cal. or 310–tf

WHEN WRITING ADVERTISERS PLEASE MENTION THE AMERICAN FANCIER

"Profitable Poultry Keeping in All its Branches."

This is the title of the new and elegant Catalogue issued by the Cyphers Incubator Co., for 1901. It contains 224 pages, 8x11 inches in size, over 200 fine new half-tone illustrations and a wealth of interesting, down-to-date matter, covering the subject of **Poultry for Profit** in all its branches.

This is a Brand New Book,

not a re-hash of old ones. Contains special articles written by experts, and illustrates and describes over fifty of America's largest and most successful Duck, Broiler, Roaster and Egg Farms. It also contains the endorsements of over one hundred of the foremost breeders of this country—men and women who are using the **Cyphers Incubators**—and shows photographic views of many of their poultry plants and favorite poultry houses. Ask for Book No. 9 enclosing 10c in stamps, and address nearest office.

TYPOGRAPHICAL UNION LABEL FULTON COUNTY No. 765

SATURDAY JULY 20 1901

From the Editor's Perch.

Orders for the newly revised Standard of Perfection have been filed and will be filled as soon as we receive the books from the publishers. They were promised us over a month ago, but up to the time of going to press with this issue we have received no intimation from the secretary of the American Poultry Association when the Standards will be ready for mailing. Mr. Bridge's long illness is presumably the cause of this unfortunate and annoying delay.

***

Dr. H. P. Clarke's article in this issue on the origin of the Cornish Indian Game will prove interesting reading to fanciers of this grand breed of fowl. Much of what Dr. Clarke says regarding the shape of males as seen at the average shows is true. But the damage was done as far back as 1890 and 1891, when many stilted, snake-headed specimens were favorably passed upon by judges, who seemed to lose sight of shape entirely and simply went in for color and high station.

***

That Aseel blood is being used more frequently of late was noticeable in certain winners imported from England and shown at a number of leading eastern shows. The proportion of really typical heads and proper colored eyes in Indian Game males is very small. As the latter, as a rule, accompany a bird of massive proportions, the utilitarian quality of such a male is readily understood.

***

The magnificent sheen or lustre on a well bred Indian Game is another point that never must be overlooked. It is one of the great characteristics of the breed, and although high feeding and special culture will do much toward bringing out glossy feathers, the tendency must be in the blood itself regardless of artificial methods in trying to imitate or approach it.

***

A consignment of White Indian and White Malay Games sent to the Philadelphia show in 1891 by Mr. Whitfield, of England, was purchased by C. A. Sharp & Co. and formed the foundation of the Majestic strain of White Indians. These birds were in the yards of the writer of these notes for some time prior to the show, and the White Indians were typical specimens in style and shape, the head points being especially fine. They produced many fine specimens and the type seemed to be quite well established. We are quite certain that they proved to be superior layers to the Cornish Indians as well.

***

We cannot agree with Dr. Clarke in advising or suggesting a White Plymouth Rock cross in order to produce White Indians. We have seen and handled a number of such birds and found them rather coarse and loose feathered, with poor heads and eyes and a decided tendency to breed creamy plumaged birds.

***

It seems that in a fit of spring fever madness we opened the door to the chicken "poets." It also seems that there is a bitter rivalry rampant among these verse manufacturers. Mr. C. Bright has stirred 'em all up, and this week we publish another poem, but that is another Story. We hope to be pardoned for this twisted Kiplingism, for the provocation was too strong.

***

The premium list of the Toronto Industrial Exposition for 1901 is at hand. It is fully up to the liberal standard of previous ones, and the poultry and pigeon departments are unusually well taken care of. The prizes on single birds are two dollars to first and one dollar to second. Entry fee, 25 cents. Exhibition pens are awarded three dollars to first and two dollars to second, the entry fee being one dollar. There are no strings to these premiums, the winner of first money receiving the same whether there is competition or not. Entries close August 14 and judging begins August 29. Mr. C. J. Daniels is again superintendent of the poultry department, and a better selection is impossible.

***

We are glad to note the name of "Joe" Bennett in the list of judges at Toronto. "Joe" will judge Barred Plymouth Rocks, and it is our candid opinion that he is fully equal to the task.

***

Another good move at Toronto is assigning George H. Burgott to the Leghorn classes. Mr. Burgott is a very close student of the Leghorn fowl and follows his interpretation of the Standard very consistently and closely and cannot be called a faddist, as some specialty judges are reputed to be.

Irving Crocker, of Seneca Falls, N. Y., paid us a brief call recently. Mr. Crocker, once a great Silver Wyandotte crank and later a strong admirer of the Buff Wyandotte, has caught the Rhode Island Red fever. He is a strong believer in the commercial value of the "anarchistic" breed—the Reds.

***

President W. H. Card writes us that the Bristol Poultry Association will hold a show February 4 to 6, 1902. The judging will be by comparison. O. J. Bailey, Bristol, Conn., is the secretary. The Bristol show is bound to be a good one, as among the members of the association under whose auspices it is held are many prominent and well known fanciers.

***

Frederick Mather, the new proprietor of the Sir William Johnson Hotel, of this city, is a well known chicken fancier and keeps quite a flock of Pit Games at his old home in Massachusetts. He was one of the star breeders of White Plymouth Rocks a few years ago. It did not take Mr. Mather long to get acquainted with the chicken fanciers of this vicinity and to become a member of the Adirondack Poultry Club. He promises to give all visiting fanciers a hearty welcome, and we can assure all that "Mine Host" Mather is made of the right stuff.

***

The Fanciers' Gazette, England, is kind enough to editorially publish the following:

"A correspondent, writing to the Daily Mail, who terms himself 'Not a Bigot,' says: 'The American turkey, the American chicken, and American refrigerated beef form a large part of the better class Englishman's dietary, but in most cases he doesn't know it. No harm is done him thereby, because nothing can be finer, more tender, toothsome and palatable than American chilled or refrigerated beef. It is not to be classed in the same category as frozen beef. It is bought by the best butchers in London and throughout the country, but rarely sold openly and frankly and honestly for what it is. It is as good as and usually in better condition for the table than 'prime' English or Scotch If not actually sold as 'English' or 'Scotch,' it is sold for whatever the customer may like to think it. It is the same story with American chickens and turkeys. They are equal to the best home reared and fed. On the table they please both eye and palate. Why not sell them for what they are and let the customer take his choice?"

***

In connection with the above report regarding American products abroad, the following statistics from Bulletin 128 of the U. S. Department of Agriculture will indicate the growth of the poultry industry during the last decade:

"In 1890 the total number of eggs exported was in round numbers 381,000 dozen, worth $59,000; in 1899, 3 694,000 dozen, worth $641,000. In 1890 this country imported 15,000,000 dozen, which were valued at $2,000,000, and in 1899 only 225,000 dozen, valued at $21,000. Taking into account the five years up to and including 1898, 61 per cent of the exported eggs were sent to Cuba, 20 per cent to Canada, and 11 per cent to Great Britain, while the remainder was distributed among many other countries. During the same period 96 per cent of the eggs imported came from Canada, 3 per cent from China, and the remainder from various other countries. These statistics of the egg trade are of interest, since they show the great growth of the poultry industry and indicate what it may become in the future. Some of the developments may be fairly attributed to the work of the government and the agricultural experiment stations. For many years a considerable number of the stations, especially those in Alabama, California, Indiana, Kentucky, Louisiana, Maine, Massachusetts, Michigan, New York, North Carolina, North Dakota, Oklahoma, Oregon, Rhode Island, South Carolina, Utah and West Virginia, have been experimenting upon methods of feeding and caring for poultry, the comparative value of different breeds, the possibility of increasing egg production by proper feeding and the selection of laying stock, and similar problems. The station bulletins reporting the investigations have been circulated widely."

The annual earnings of the estimated 300,000,000 head of poultry in the United States is placed at 500,000,000 dollars in poultry and eggs. New York state and city alone consume about 50 million dollars' worth of eggs and poultry. People who formerly sneered at the idea of a chicken playing an important part in the great live stock and agricultural industries of this country, now begin to look upon the poultry business as one of the greatest of all. And still we are only emerging from the infant stage, with much greater possibilities in store for us at no distant day.

Games and Game Bantams.

Editor American Fancier: I have noticed a good deal of talk going on in my different papers in regard to raising and where they are raised of the above varieties. I admire Mr. B.'s and Mr. C.'s stand on the subject, as I do not think the credit of all good ones in our land today should go across the pond. Very true, there have been some very nice ones imported and also some very poor ones. I was at the last New York show and am sure I saw some wonderfully good birds, and do not think they were all imported ones at that. In fact, I know they were not. Now, as to raising. I have raised a good many B. B. R. Games in years gone by and never had a great deal of trouble at doing it, and at the present time I have some 50 Pile Bantam chicks coming along and have only lost four since I started. The first were hatched in April, and I am of the opinion that these are a little harder to raise than the Standard Games. I think the one great secret in raising Games and Game Bantams is to put them on plowed ground for eight weeks or so in among corn and potatoes. I have done this and have no more trouble in raising them than I do my Buff Rocks. I think I have a receipt for feeding Game Bantams that will raise every chick, unless it is a cripple at the start or has lice. I would give it here only that it would be too much of an advertisement for an individual firm, but will gladly give it to anyone that will drop me a postal. PETERS.

Lenox, Mass.

Correction.

Editor American Fancier: The list of specials which appeared in the last issue need a bit of correction. The sweepstake special for best cock, hen, cockerel, pullet and pen is valued at $100, instead of $1, as given in your paper.

Cornish Indian Items.

ORIGIN.

When stock raisers use the term "grade," as for example in the expression "a grade Jersey," they refer to a bovine which is not pure but contains just enough of the Jersey blood to make predominant the characteristics of this breed. Thus it will be readily understood when I say that the Cornish Indian is nothing more nor less than a "grade Aseel." The Oriental is wonderfully strong in reproductive power; so much so that if you mate a laced Aseel cock with a hen of just any large sized smooth legged variety, you will get fowls from which Cornish Indians may be easily evolved, by a little selection in breeding. So it is not necessary to imagine all Cornish as having come from some one particular mating, as for example, the Aseel-Derby cross told of by Sir Walter Gilbert. On the contrary, it is certain that different strains had separate origins, as is even yet apparent from variations in style, carriage, disposition, etc In fact, I have myself produced typical Cornish Indians without the use of a particle of Cornish Indian blood.

DATE OF BIRTH.

Mr Whitfield, the English author, is mistaken in saying: "The present breed has been known for at least thirty years by the name of Cornish Game." Any old cocker could have told him that the Cornish Game of thirty years ago was a hen-cock, an entirely different race of fowls. Mr. Whitfield quotes Lewis Wright as describing a fine display of Indian Game at Plymouth in 1870. Look it up. Wright mentions Montressor as one of the leading exhibitors, and you can depend upon it that Montressor's birds were Aseels. Doubtless there were present plenty of Pheasant Malays and other Aseel crosses also, but one very important point should be noted here, viz: The name "Indian Game" was at first applied only to the genuine article. Classes in the early shows which were provided for Indian Game were intended primarily for Aseels. It was not until later that the grades and crosses crept in. These latter being of large size were favored by many utilitarian judges, and the result was all kinds of mongrels being shown as "Indian Game." Then the name came to represent a class rather than any one breed or variety, and while some fowls bearing resemblance to our Cornish were doubtless shown at a very early date, there was no uniformity about them nor was there any particular type (aside from the Aseel) generally recognized as "the Indian Game," up to within a very short time before the organization of the first Indian Game Club.

So in fixing upon a birthday for the Cornish Indian it seems necessary to do one of two things, either start its career with the time when it first stood alone (about 1886), which seems to me the more reasonable, or else begin its history with the pre exhibition era of the old Pheasant Malay, the nearest approach to a distinct variety of any of the several later merged into the modern Cornish.

INTRODUCTION INTO AMERICA.

Just during the last two or three years there have been told all sorts of fairy tales upon this subject, but the most trustworthy testimony is certainly the printed record of those times, the magazines and monographs; which prove conclusively that Cornish Indians were first brought to America and first exhibited in this country by Dr. H. P. Clarke, Indianapolis. Authentic history may be found in the Game Fowl Monthly, in "The Indian Game Fowl" by G. T. Whitfield, or in "The Indian Game" by H. S. Babcock. This latter is most remarkable in being not alone historical but also truly prophetic. Note one sentence from the preface: "At this time the facts concerning the earliest importations of the Indian Game into the United States are sufficiently fresh in the minds of breeders to enable them to be stated accurately, but with each succeeding year these facts will grow more and more obscure, and in their places will appear myths more or less monstrous." Which quotation ought to be carefully committed to memory by Mr. W. S. Templeton and others.

STYLE AND CARRIAGE.

The average Cornish Indian no longer has the slightest claim to the word "Game." It has lost all the elegance, grace, agility and beauty so characteristic of this noble family, and has, in fact, degenerated into nothing more than a common market chicken, and furthermore, has little hope for improvement, as it is extremely doubtful if the ordinary feather-legged poultry judge would appreciate a well-bred and truly aristocratic specimen if he saw one. But there have been, and may yet exist, a few fanciers who admire the Cornish as a variety and still wish for something better than the soft feathered, dull colored, ungainly brutes now seen in our poultry shows. It is for the benefit of such connoiseurs that these notes are written.

As stated above, the Cornish is a "grade Aseel" and by whatever proportion of blood the Oriental has been adulterated, by just that much is the fowl short of purity and of perfection in type. It is not the pure Aseel that we desire, that is entirely too small in size and most too blocky in build. The Shamo variety of Japanese Game, another Oriental breed, comes very close to what we want, as will be readily realized by those fanciers who are so fortunate as to have seen that magnificent pair in the Japanese department of the Agricultural Building at the Chicago World's Fair. Those birds were of very large size and of perfect double-laced Cornish color. As a rule the Japs are quite narrow and shallow in build, also most too reachy, while birds of the required markings are not by any means common. Still, the proper kind can be secured, and such a hen bred to a laced Aseel cock will throw some "Cornish" of Standard shape, color and weight, with perfect pea-comb and all the other necessaries. In addition, they will be wonderfully glossy in plumage, proud as peacocks, graceful as fairies, and moreover, thoroughbred game.

COLOR MARKINGS.

So far as individual feathers are concerned, the Cornish Indian has been considerably improved in the hands of American fanciers and there is much more uniformity in the fowl now than ten or twelve years ago. At the same time it must be noted that the actual beauty of the variety has gone backward instead of forward. In real gloss and brilliancy of plumage there has been a decided retrogression, while that peculiar effect in the lacing so aptly described in the early English Standard as "appearing to be raised or embossed," is now entirely gone. The remedy is to introduce fresh Oriental blood for the improvement of the plumage, then breed for narrow lacing and rich coloring. You will not be worried with white feathers unless you go in for too much black.

COURAGE.

Several writers have of late called attention to the fact that the "Cornish is no fighting bird, hence devoid of pugnacity." Now there is absolutely no connection between courage and "scrappiness." Several of the genuine game breeds are in their home flocks as docile and peaceable as the proverbial "sucking dove," while such arrant cowards as the Malay and the Yokohama have dispositions which are positively detestable. The Cornish ever was rather a quiet, easy-going sort of a fellow but that is no sign he has always been a coward. The first Cornish Indians brought to America were imported not for exhibition nor for table use, but for natural spur fighting, for which purpose they had been bred in England and at which form of contest they were actually the best of their time. Several of the leading English strains were similarly bred in early days, and as late as 1888 you will find one of the Fraynes writing contributions to the poultry journals upon the prowess of his stock.

Were the birds really "dead game?" No, but so very near it that they could stand more naked heel punishment than almost any other race of fowls could inflict. And the fact that many of the exhibition Cornish of the present day have absolutely less courage than Plymouth Rocks or Wyandottes—while incomparable to Leghorns or Red Caps in this respect—would seem to be very strong evidence that Cochin or Langshan blood had been infused.

WEIGHT.

It is quite common to hear or read of Cornish Indian cocks weighing thirteen to fourteen pounds, but how about the actual record weights? Let us have presented some of them. At the Indianapolis show of 1891 there was a special prize offered for "heaviest game cock, any variety," which was captured by my old bird "Maharaja," tipping the beam at 12 lbs. 10 oz. If these figures have ever been publicly beaten, I hope some one will kindly furnish the particulars.

WHITES AND OTHER COLORS.

It is now nearly twelve years since I contributed to one of the poultry papers an article on "White Indians and How to Make Them." The suggestions there contained seem to have been well acted upon, for several strains of White Indians sprang into existence within a few seasons thereafter, though I doubt if any were the result of what was called "the ideal mating," viz: Aseel and Shamo Jap. White Japs are very difficult to find. However, White Malays are easily procurable and answer the purpose very well, while if size be wanting, the White Plymouth Rock is always at hand.

All breeders of Indians have probably noted the potency of the Oriental. If you mate together a Cornish cock, for example, with a hen of any other variety, you will get progeny, a good proportion of which (particularly the cockerels) will follow the Cornish in style and the other breed in color. This strength in transmission of type is even more apparent with the pure Orientals, and many curious and interesting results have been obtained from experimenting along this line. I believe I have produced Cornish Indians of almost every imaginable color, but the most notable example of freak markings came out in a combination of Aseel, Jap and Bruges. The last named is a large bluish fowl similar in color to the Andalusian, and this combination produced what might be called a "bronze laced blue"; very handsome, quite Cornish in shape, and the most startling in effect of any colors I ever saw on a chicken. Which merely suggests what a quantity of sub-varieties some future Standard may be burdened with.

H. P. CLARKE.

Indianapolis, Indiana.

Faverolles at Valley Farm.

Prompted by the great interest shown of late by the American fancy in the Faverolle fowl, Valley Farm, of Simsbury, Ct., of which Joseph B. Thomas, Jr., and J. F. Crangle are respectively the owner and manager, has made an importation at great trouble and attendant large expense. Believing them to be, from their sterling qualities, something which should be in the possession of the great American fancy, Valley Farm will introduce these birds to the American public at the great Hagerstown and Pan-American shows in the autumn and later at Philadelphia Boston and New York.

—Look at our show reports during the season. They alone are worth double the price of subscription.

MILLIONS IN OIL

California Again Attracting the Attention of the Civilized World. :-: The Gold Fever of 1849 Eclipsed by that of Oil in 1901...

THE MIDWAY OIL COMPANY,

OF OREGON,

Lands Situated in the World Famed Sunset MIDWAY DISTRICT.

This Company owns and controls over 2000 acres of selected oil land and is conceded by all who know anything about the Oil Companies of California to be one of the best, largest and strongest in the Golden state.

DEVELOPMENT NOW UNDER WAY.

The Midway Oil Company has two wells started, each down about 800 feet, and two other wells just started. Work on them all is being pushed with vigor.

HAVE LEASED THREE EIGHTY-ACRE TRACTS.

The Company has leased three 80 acre tracts, contracts call for immediate work and well will be drilled at once. There is no doubt but what at least 7 rigs are now steady at work on the Midway Co. property.

NO SPECULATION IN THIS.

An investment in Midway stock is an investment without any speculation whatever as to loss. The only speculative feature being how much more will you make than the amount figured on.

LANDS ALONE VALUE AT $2,000,000.

There are guarantees top of guarantees for investors in this stock and it may all be withdrawn from market any hour.

OFFICERS AND DIRECTORS.

The men in charge of this company are able and honest, and have means to develop the property without selling stock. However, for a time they offer

TEN THOUSAND SHARES FOR SALE AT PAR!!

$1.00 per share. A few Portland business men who know the Officials took 50,000 shares. The company has no prospectus, they did not intend to sell stock. All information, reference, etc., will be cheerfully given upon request.

Address

THE MIDWAY OIL COMPANY,

506 PARROTT BUILDING, SAN FRANCISCO, CAL., OR

J. A. SMITH, EASTERN AGENT

68 STATE STREET, ALBANY, N. Y.

08-tf

HON. ASHLEY W. COLE, Brooklyn, N. Y., Chairman Board of State Railroad Commissioners.
STILSON HUTCHINS, Washington, D. C., Publisher and Mine Owner.
HON. STEPHEN W. DORSEY, New York, Ex-U. S. Senator and Mine Owner.

BANKERS.

WELLS, FARGO & CO'S BANK, - - - - 63 Broadway, New York.

OFFER 200,000 SHARES TREASURY STOCK AT $3.00 PER SHARE.

THE CALIFORNIA KING GOLD MINE COMPANY owns 23 claims in Picacho Basin, four miles from the Colorado River, in California, and twenty miles by direct road from Yuma, Arizona. . . . . .

DEVELOPMENT work has been in progress for six years, and more than ten thousand feet of shafts, drifts levels and cuts have been completed and paid for.

Upwards of fifteen million tons of ore are now ready for the mill, all of which will be mined by open cuts at a nominal cost.

A CONTRACT has been entered into for the erection of a mill and cyanide plant capable of handling 1,000 tons of ore daily, which will be completed this year. The Directors guarantee that this plant will be placed in operation, regardless of the amount of treasury stock subscribed. The net profit after commencing work will exceed $60,000 a month, and probably reach $100,000 a month within a year. The ore in sight will supply such a plant for more than forty years, assuring an annual return of 20 per cent or more on the investment.

There is no promotion stock. No salaries to officers. Every dollar realized from the sale of stock, goes into the treasury to pay for the plant. Reports of J. Ralston Bell, London; William A. Farish, Denver; Emerson Gee, Denver; P.C. Du-Bois, Berkeley, Cal.; J. L. Shepherd, and others, all eminent mining engineers, strongly recommend this property.

This is an Opportunity to invest in a large Mining Property of known value, managed by experienced mining men in the Interest of stockholders

Application will be made for listing the stock on the Boston Stock Exchange. Prospectus and any information desired will be furnished on application. Subscriptions received by

The California King Gold Mines Co., 32 Broadway, N. Y. City.

Johnstown, - - - N. Y.

Mr. Glasgow Replies to Mr. Blunck.

Editor American Fancier: Permit me to reply to Mr. A. E. Blunck's article, which you printed in a recent issue of your valuable paper, on the question of my report on Games and Game Bantams at New York in February last.

If I were to allow it to pass unnoticed some people may entertain the idea that what he terms a "hornet's nest" that said report has brought about my ears had driven me to hide from the stings of what is generally considered colonies of very venomous insects. Having got acclimatized in the New Jersey swamps, the home of the mosquito, I can assure your readers even a joint attack of three or four hornets have no terrors for me, as I am now somewhat of an "Immune" and an extra dig or two has not the slightest effect on my old and hardened hide.

In replying to Mr. Blunck and his fallacious arguments, there is one thing he cannot say, and it is more than can be said of nine-tenths of individuals who write reports for the poultry press, I am neither afraid or ashamed to father what I write, as when a report emanates from my pen all and sundry does not need to do any guessing as to the authorship, as they will find my sign manual attached every time. It is somewhat late in the day for Mr. Blunck to take up this matter, something like five months after my grievous offense of telling the truth about those Games and Game Bantams at New York.

That in my report any "roast" was intended for Mr. Chapin, a fancier for whom I have the highest respect, there is not the slightest foundation. It is one thing to roast an exhibit, but quite another the owner. I have not a copy of my remarks before me at present respecting Mr. Chapin's exhibit in the Game class and do not think it worth the trouble to hunt it up amongst my files of papers, but if my memory serves me right it simply amounted to this—that they were the best of the poorest lot of Black Red cockerels I had seen at New York for years, the winners having nothing to recommend them beyond their beautiful color, and this opinion I still adhere to.

Although an exhibitor in the same class, my criticisms were entirely disinterested, as there were other birds in the class outside of Mr. Chapin's trio better than mine, which was, I think, about the poorest Game cock I ever exhibited at New York and had no hopes of winning when I entered it, but I am not like some people whose names I could mention. I know when I have a poor specimen as a show bird if they don't, and run away with the idea all their ducks are geese and their geese swans and wonder how in thunder the judge did not entertain the same opinion.

Because the judge at New York awarded Mr. Chapin's birds first, second and third prizes, by no means proves that they were of extraordinary merit as typical specimens of the breed or that he entertained that opinion, but that they were the best of a poor lot, and if this Johnstown gentleman to whom Mr. Blunck refers (although he does not give his informant's name) considers them as fine as he had ever seen at New York, and Mr. Blunck concedes that he would as soon take my judgment of a Game fowl as any man in the country, either Mr. Blunck's estimate of my judgment is ill founded or his informant was simply talking "through his hat" and does not know the first thing about it, as there was just as much difference between the recent winners and some shown in past years as chalk and cheese. There have been some "flyers" shown at New York within the past seven or eight years and Mr. Blunck has owned some of them, and there are others.

That it is the custom of some reporters to laud to the skies the birds awarded premium honors I know, but it is a pernicious one. I never will unless the specimens in my opinion merit it. We have incompetent judges and some will have it we have dishonest ones, although I, for one, would be very sorry indeed to endorse the latter sentiment, as for one dishonest judge there are scores of dishonest exhibitors and ten times that number of ignorant ones, utterly incapable of weighing the merits of competing specimens in a class, and these, as a rule, are the kickers, and when taken to task by applying the Standard simply display their ignorance. Still they will not be convinced. They can see the faults in others, but are utterly oblivious to those of their own.

Mr. Blunck says legitimate criticism cannot be objected to. Right! It is good that someone else's opinion should be passed on a judge's work, but that it should be done by a disinterested individual. Then who are we to have for critics? Are we to rely upon editors or men employed on the regular staff of the several papers? Who are more interested than they? The very existence of some—I may say the vast majority—of our papers measure their write-ups in accordance with the patronage they receive in the shape of advertising, some even stooping so low as to permit their advertisers to write their own puffs. Newspaper proprietors and editors are therefore ineligible parties to write a critical report, as they are interested, very much so, in the exhibits of their clients. Numbers of the reports emanate from the judges, and they have no right to criticise their own work unless it is publicly stated that they have written it.

According to Mr. Blunck's idea, it is impossible for any exhibitor in a class to give an unbiassed report. Mr. Blunck, perhaps, would measure other people by himself in this matter, but he has no right to do so. If a man be honest, exhibitor or not, if he knows his business can and does write an unbiassed report, but the whole thing rests in a nutshell. Every man who undertakes to write a report for a newspaper should attach his name thereto, and then not only exhibitors but non-exhibitors and readers generally would be enabled to read within the lines not only as to their capabilities and knowledge to criticise, but it would correct the far too much prevailing custom of unfair criticism, otherwise what might be termed stabbing in the dark.

With regard to my connection with Havemeyer Bros. as their manager, in writing reports I defy Mr. Blunck to point out a single instance in any of them where I have written anything that was not fully borne out by the merits of the specimens themselves, irrespective of the ownership or my connection in superintending the breeding of them.
